## BUREAU OF THE CENSUS

ROBERT W. BURGESS, *Director*

A. ROSS ECKLER, *Deputy Director*

HOWARD C. GRIEVES, *Assistant Director*

CONRAD TAEUBER, *Assistant Director*

JACK B. ROBERTSON, *Special Assistant*

MORRIS H. HANSEN, *Assistant Director for Statistical Standards*

WALTER L. KEHRES, *Assistant Director for Administration*

CALVERT L. DEDRICK, *Chief, International Statistical Programs Office*

A. W. VON STRUVE, *Acting Public Information Officer*

**Industry Division—MAXWELL R. CONKLIN, *Chief***

OWEN C. GRETTON, *Assistant Chief for Manufactures*

Statistical Methods—Jack L. Ogus, *Chief*

Economic Planning and Analysis—Murray D. Dessel, *Chief*

Materials Data and Analysis—Morris R. Goldman, *Chief*

Commodity Data and Analysis—Irvin Strauss, *Chief*

Industry and Commodity Classification—Isidore Bogdanoff, *Chief*

Food Products—Joseph A. Zettler, *Chief*

Textiles—Willis K. Jordan, *Chief*

Apparel—Alfred I. Jacobs, *Chief*

Wood Products—Cyril M. Wildes, *Chief*

Chemicals—Jack J. Gottsegen, *Chief*

Metals and Metal Products—Clarence H. Olsen, *Chief*

Machinery and Equipment—David N. Cohen, *Chief*

**Economic Operations Division—M. D. BINGHAM, *Chief***

IRVING WEISS, *Assistant Chief for Processing*

SOI DOLLECK, *Assistant Chief for Systems Development*

**Administrative Service Division—EVERETT H. BURKE, *Chief***

**Agriculture Division—RAY HURLEY, *Chief***

**Budget and Management Division—CHARLES H. ALEXANDER, *Chief***

**Business Division—HARVEY KAHIN, *Chief***

**Field Division—ROBERT B. VOIGHT, *Chief***

**Foreign Trade Division—J. EDWARD ELY, *Chief***

**Geography Division—CLARENCE E. BATSCHLET, *Chief***

**Governments Division—ALLEN D. MANVEL, *Chief***

**Housing Division—WAYNE F. DAUGHERTY, *Chief***

**Machine Tabulation Division—C. F. VAN AKEN, *Chief***

**Personnel Division—HORACE H. CARROLL, *Chief***

**Population Division—HOWARD G. BRUNSMAN, *Chief***

**Statistical Reports Division—EDWIN D. GOLDFELD, *Chief***

**Statistical Research Division—WILLIAM N. HURWITZ, *Chief***

**Transportation Division—DONALD E. CHURCH, *Chief***

This volume comprises the 1954 Census of Manufactures Industry Bulletins, Series MC-20A thru MC-39E, and related supplementary materials.

U. S. Government Printing Office, Washington, D. C., 1957

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., or any of the Field Offices of the Department of Commerce. — Price \$7.00

## PREFACE

This is one of a series of three volumes presenting final results of the 1954 Census of Manufactures. The 1954 Census was a large-scale undertaking which depended upon significant contributions from a great number of private and public organizations and individuals. Essential to the success of the Census, of course, was the excellent cooperation of some 280,000 manufacturing establishments in completing the appropriate report forms.

Hundreds of trade associations and thousands of individual manufacturers--large, medium, and small--as well as Government agencies and other data users provided valuable counsel in determining the types of information which would be of maximum usefulness. Among the Government agencies, the Bureau of the Budget, Business and Defense Services Administration, Bureau of Labor Statistics, Bureau of Mines, Department of Agriculture, the Office of Business Economics, the Board of Governors of the Federal Reserve System, and the Tariff Commission made especially important contributions to the 1954 Census. Also noteworthy was the assistance of the Advisory Council on Federal Reports in advising upon the feasibility of collecting various types of data and in participating in efforts aimed at minimizing the reporting burden. Support by the United States Chamber of Commerce, the National Association of Manufacturers, and other business groups, and timely publicity given to the Manufactures Census by the press, television, and radio aided materially in the collection of the reports.

The primary responsibility for the 1954 Census of Manufactures was centered in the Industry Division of the Census Bureau. Other divisions of the Bureau, particularly the Economic Operations Division, Machine Tabulation Division, Field Division, Administrative Service Division, and the Electronic Systems Branch, also had important functions in the Census.

The Manufactures Census was taken under the supervision of Maxwell R. Conklin, Chief of the Industry Division. The individuals listed in the organization structure of the Division shown on the opposite page carried the principal responsibility for the Census within the Division. Other Industry Division staff personnel also had important responsibilities in various phases of the Census. Their individual and collective contributions were essential to the completion of the census and of greater significance than would ordinarily be inferred from the mere alphabetic listing of their names which follows: Daniel Arrill, John J. Bartosiewicz, Paul F. Berard, Martin Bloom, Evelyn W. Colburn, Alice K. Cullen, Angela R. Daly, Jerome Deitch, M. Audrey Dickerson, Robert J. Dressel, David M. Fishbein, Edward D. Gruen, Arthur W. Horowitz, Shirley Kallek, Alvin S. Lubeck, Martin L. Marimont, Reese R. Morgan, Richard J. Rice, Albert A. Schulman, Charles H. Wittman, and John J. Zirkle, Jr. These individuals merited recognition for their participation in the development of the Census inquiries, the preparation of the report forms and instructions, the design of specifications for editing and coding the returns and the preparation and review of final text and tables. In a broader sense, special mention is due the entire staff of the Industry Division and a large number of people in other divisions of the Bureau during the collection, processing, tabulation, and publication of data from the 1954 Census of Manufactures.

Processing of the 1954 Census of Manufactures reports was performed by the Economic Operations Division under the supervision of Marion D. Bingham, Chief, Irving Weiss, Assistant Chief for Processing, and Sol Dolleck, Assistant Chief for Systems Development. Milton D. Lieberman, Chief of the Manufactures Census Branch and Sol Dolleck who succeeded him in that position on October 24, 1955 were assisted by Herman Hess, Walter A. Hines, Mary H. Johnson, Joseph M. Schubert, and Donald E. Young. Samuel Schweid contributed to certain procedural aspects of the Census and Robert Hansen to the Univac programming of the editing and tabulation phases.

Donald K. Heiser, Chief of the Electronic Systems Branch, and Rudolph M. Micoly, Chief of Operations for the Branch, were responsible for the utilization of electronic computer and accompanying high-speed printer equipment in the Census.

C. F. Van Aken was Chief of the Machine Tabulation Division and, in that division, Catherine M. Neafsey, Chief, Economic Section, and Emil Gorgovits were responsible for the machine tabulation procedures used in the Manufactures Census.

In the Field Division, Jack B. Robertson, then Chief of the Division, and Ivan G. Munro, Assistant Chief, were responsible for directing the field work for the Census of Manufactures. George Klink, Branch Chief, supervised the collection of reports from Eastern sawmills that were not included in the Census mail canvass.

Julius Shiskin, Chief Economic Statistician in the Office of the Assistant Director for Statistical Standards, as well as Harold T. Goldstein and Irving Rottenberg of that office, contributed to the coordination of the Manufactures Census with the Censuses of Business and Mineral Industries and to several phases of the planning and processing of the Censuses. In addition, Mr. Goldstein assisted in the planning and preparation of the textual material for the industry reports.

Robert H. Brooks, Chief of the Graphics Branch of the Administrative Service Division, was responsible for preparing the Census of Manufactures publications for reproduction. Elma D. Beynon and Ingrid L. Millison of the Statistical Reports Division reviewed text material and table forms, and assisted on publication problems.

## 1954 CENSUS OF MANUFACTURES FINAL REPORTS

### Volume I: SUMMARY STATISTICS

#### Chapter

- I. General Summary
- II. Employment and Payrolls
- III. Size of Establishments
- IV. Type of Organization
- V. Manufacturers' Inventories
- VI. Expenditures for Plant and Equipment

#### Chapter

- VII. Horsepower of Power Equipment
- VIII. Fuels and Electric Energy Consumed
- IX. Industrial Water Use
- X. Selected Materials Consumed
- XI. Industry Specialization of Establishments
- XII. Selected Metalworking Operations

SPECIAL REPORT: Manufacturing Activity in Government Establishments. The special report also appears in Volumes II and III.

Chapters I–XII also issued as separate reports in Bulletin Series MC–200.

---

### Volume II: INDUSTRY STATISTICS

Separate chapters for each of 81 groups of related industries. These chapters include, for approximately 460 individual industries, statistics on employment and payrolls, inventories, capital expenditures, fuels, electric energy, and power equipment as well as quantities and values of

individual products made and materials used. Also included in this volume is a general summary chapter and separate summary chapters for each of the 20 major industry groups. (The 81 industry group chapters were issued as separate reports in Bulletin Series MC–20A–MC–39E.)

---

### Volume III: AREA STATISTICS

Separate chapters for each State, the District of Columbia, and Alaska and Hawaii. Statistics for standard metropolitan areas, counties and cities, and States by industry with cross classification by industry group for large standard metropolitan areas and principal counties. Also

included in this volume is a summary chapter for each of the nine geographic divisions. (The State chapters were issued as separate reports in Bulletin Series MC–100.)

### 1. Historical Note

The 1954 Census of Manufactures is the twenty-fifth such census of the United States. The first Census of Manufactures covered 1809. A census was taken at 10-year intervals thereafter to 1899 (with the exception of 1829). It was conducted at 5-year intervals from 1904 through 1919, and every other year from 1921 through 1939. The census was suspended during World War II, but was resumed in 1947. Legislation enacted in 1948 provided for a Census of Manufactures every 5 years, with annual sample surveys authorized for interim years. Such Annual Surveys of Manufactures were taken covering the years 1949 through 1953.

The 1954 Census, originally scheduled for 1953, is the first complete one since 1947, the next one is scheduled for 1958. For 1954, it was conducted jointly with the Censuses of Business (Wholesale, Retail, and Services) and Mineral Industries, covering the continental United States, Alaska, and Hawaii. Separate Censuses of Manufactures and Business for 1954 were also conducted in Puerto Rico jointly with the Commonwealth Government.

### 2. Publication of the 1954 Census Results

Results of the 1954 Census of Manufactures are published in three volumes: Volume I, Summary Statistics, shows comparative statistics for industries, States, and principal metropolitan areas for the more important measures of the activity of manufacturing establishments—employment, payrolls, inventories, capital expenditures, value added by manufacture, important materials consumed, etc.; Volume II, Industry Statistics, is a consolidation of reports for the 81 groups of industries and shows detailed information on individual industries and products. Volume III, Area Statistics, shows for each State and its important metropolitan areas and industrial counties, general statistics (number of establishments, number of employees, payrolls, value added by manufacture, and capital expenditures) for each of the industries of consequence in that State or in its principal metropolitan areas. Totals for all manufacturing are shown for all counties and for cities of 10,000 inhabitants or more. Supplemental reports such as that covering the Index of the Physical Volume of Production are also published.

### 3. Significance of the Manufacturing Sector of the Economy

Manufacturing is the largest of the industrial sectors in the economy. Table A below shows that manufacturing accounted for approximately 30 percent of the total national income. The next largest sector, wholesale and retail trade, contributed only slightly in excess of 17 percent.

Table B shows the relative importance of the major industry groups within manufacturing based on value added by manufacture. It should be noted that the concept of value added by manufacture which is used by the Bureau of the Census is different from the national income measure used by the Office of Business Economics. See section 23 of this Introduction: Value added by Manufacture, for discussion of the two concepts.

Table A.--NATIONAL INCOME BY PRODUCING SECTOR, 1954  
(In millions of dollars)

Industry group	National income	Percent of total
All industries, total.....	298,335	100
Manufacturing.....	89,555	30
Agriculture, forestry and fisheries.....	16,688	6
Mining.....	5,021	2

19	Ordinance and accessories.....		

#### 4. Definition of Manufacturing Industries

The 1954 Census of Manufactures covers all establishments primarily engaged in manufacturing as defined in the Standard Industrial Classification Manual, Volume I, Manufacturing Industries, dated November 1945, as amended by the Bureau of the Budget. This system of classification is in general use among Federal agencies. The Manual defines manufacturing as the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the whole-sale market, for transfer to other plants of the same company, or to the order of industrial users or government departments rather than for direct sale to the household consumer. Some manufacturers in a few industries sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, engraving, etc.) are included in manufacturing when performed primarily for the trade but are considered nonmanufacturing when performed primarily to the order of the household consumer.

The Standard Industrial Classification was developed on the basis of the following principles:

- (1) The classification should conform to the existing structure of American industry;
- (2) The reporting units to be classified are establishments rather than legal entities or companies; each establishment is classified according to its major activity;
- (3) To be recognized as an industry, each group of establishments must have significance from the standpoint of value of sales, employment and other important economic measures. In addition, it is essential that each industry comprise a group of establishments whose output of the products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries.

The Standard Industrial Classification Manual, issued November 1945, was amended slightly by the Bureau of the Budget prior to the 1954 Census. In classifying establishments by industry in the 1954 Census of Manufactures, the Census Bureau followed the amended version of the Standard Industrial Classification. The amendments to the 1945 edition of the standard classification are described in detail in Appendix B.

The following types of activities, while having many of the characteristics usually found in manufacturing, are defined as nonmanufacturing by the Standard Industrial Classification and, therefore, are excluded from the Census of Manufactures:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, cotton ginning, and similar activities.

(b) Mineral preparation such as the crushing, screening and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the Census of Manufactures; for example, stone and clay mining at cement, lime and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Machine shops engaged exclusively or almost exclusively in repair work and repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

Consistent with the Standard Industrial Classification, the Manufactures Census does not cover manufacturing when performed (1) by retail establishments which sell most of their products on the premises directly to household consumers, e.g., retail bakeries, ice cream stores, and feed stores, (2) by contractors at the side of construction, e.g., production of paving mixtures (3) by educational, eleemosynary and penal institutions.

It is not unusual for manufacturing establishments to engage also in such nonmanufacturing activities as repair work, merchandising of products without further processing, and installation work. Ordinarily, such nonmanufacturing receipts are small in relation to the manufacturing activities and, in such instances, it is not difficult to determine that the establishments should be included in the manufacturers area. However, where these nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the allocation of that establishment to the appropriate major economic sector is more difficult.

In the 1954 Economic Censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on an approximation, was considered preferable to reported dollar volume of receipts from each type of activity, since manufacturing requires considerably more man-hours, salaries and wages, and other inputs per dollar of receipts than either wholesaling or retailing. In the case of establishments engaged in manufacturing and also in mining, repair work, installation or other nonmanufacturing services, dollar receipts were used as a reasonably valid basis of classification because these activities require substantially comparable inputs per dollar of receipts.

The concurrence of the Censuses of Manufactures, Business and Mineral Industries in the same year provided a more complete universe from which to canvass and classify establishments than did the previous Census of Manufactures which was taken a year before the 1948 Census of Business. Establishments engaged in a combination of manufacturing and nonmanufacturing activities or factories incorrectly mailed a Business or Mineral

Industries report form (and vice versa) were included in the appropriate Census on the basis of the nature of business description and other information, such as products made or resold or services performed called for on the Census report forms. However, the resulting improvement in the coverage of manufacturing between the two Census years was generally limited to small plants in certain industries and did not appreciably affect comparability of data for manufacturing as a whole or for the great majority of industries. For those industries where there is a problem of comparability for this reason, e.g., poultry dressing, tobacco stemming and redrying, the descriptive text for the industry affected discusses the nature of the change.

Data were obtained on the manufacturing activities during 1954 of establishments owned and operated by the Federal Government (military arsenals, Navy yards, etc.) and of Federal and State prisons for the purpose of presenting complete information on manufacturing operations in the United States. Statistics on the employment, value added by manufacture and products manufactured by these establishments are shown in a separate chapter in each Manufactures Volume. Such data are not included elsewhere in the Census tables and, thus, are not represented in any of the individual industry or industry group totals appearing in the Volumes. Information on Government-owned, privately-operated establishments is included throughout the Census tables in the appropriate 4-digit industry on the same basis as privately-owned and operated plants.

#### 5. Definition of Establishment

The Census of Manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a separate report for each location; also, companies engaged in distinctly different lines of activity at one location are required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size. Census tabulations of establishment reports, therefore, differ substantially from those prepared on a company basis, i.e., from consolidated reports which not only combine manufacturing activities at different locations (thereby eliminating interplant transfers) but also include the nonmanufacturing activity of the company. Census figures will also differ to some extent from other tabulations based on establishment reports where the definition of an establishment as to location and line of activity is not applied in the same way.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied. Consolidated activities at a single location are of two general types: (1) Where vertically integrated processes are present; that is, where basic or intermediate materials are produced for use in manufacturing final products of the plant. These are typified by the integrated paper mill which produces pulp, converts that pulp into paper and frequently goes on to make a variety of converted paper products; the steel mill which is integrated with a blast furnace and coke oven; and the operation of foundries, forge shops, etc., by plants producing machinery or other metal products. Typically, separate reports were obtained in the 1954 Census for the pulp-paper-paper converting or blast furnace-coke-steel mill types of integration. Much less commonly, and in fact only when it was more convenient for the company to report that way, was a separate census return submitted for integrated operations of the captive foundry or forge shop type. There are certain uncommon types of vertical integration such as tin can plants at canneries and steel mills at metalworking plants, which were usually separately reported. (2) Where the establishment produces and ships significant amounts of products classified in different S.I.C. industries. In widely varying degrees this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not of serious proportion and, even if feasible, the filing of separate reports would not be warranted as a practical matter. However, there are a number of plant locations at which 100 or more employees are engaged in each of two or more distinct lines of manufacturing as defined in the Standard Industrial Classification. The Census Bureau requested separate reports in such instances in the 1954 Census, pointing out to the respondent that a limited amount of proration or esti-

imating was acceptable in the preparation of such reports. For the most part, the effort was successful, particularly in the case of very large operations where failure to "split out" the different activities would have significantly distorted the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines, by many of the same employees, and could not be distinguished sufficiently in the companies' records to provide establishment-type reporting. The extent to which such separations could not be achieved combined with the overlap contributed by the smaller plants (those with less than 100 employees) is shown for each industry in Tables 5A and 5B of the appropriate chapter of Volume II, Industry Statistics. It is planned that the 1954 Census of Manufactures will be the last one in which separate reports will be required for the several major activities at integrated paper mills and steel mills, although it is expected that selected key items of information will be obtained separately for the major types of activities.

For the 1954 Census, as for earlier censuses, a minimum size limit was set for establishments to be included. In both the 1954 and 1947 Censuses, reports were required from all establishments employing one or more persons at any time during the census year, whereas in prior censuses, establishments with less than \$5,000 value of products were excluded. The change in the minimum size limit in 1947 does not appreciably affect the historical comparability of the Census figures except for data on number of establishments for a few industries.

#### 6. Industry Classification of Establishments

Each of the establishments covered in the census was classified in one of approximately 450 manufacturing industries in accordance with the industry definitions embodied in the Standard Industrial Classification system (see Appendix A). Under this system of classification, an industry is generally defined as a group of establishments producing a single product or a more or less closely related group of products. The product groupings from which industry classifications are derived are based on such considerations as whether they are typically produced by the same establishment, similarity of manufacturing processes, types of material used, types of customers, and the like. The group of products assigned to an industry is said to be "primary" to that industry. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value, its production of products of any other single industry. In a few instances, however, the industry classification of an establishment is determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. The general statistics (employment, inventories, value added by manufacture, etc.) shown for an industry, therefore, reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. For this reason, in relating industry statistics to product statistics showing shipments by all industries of the primary products of that industry, the composition of the industry's output as shown in Tables 5A and 5B of the Industry Volume should be considered. The extent to which industry and product statistics can be related is measured by two ratios which are available in Table 5A of the Industry Volume. The first of these ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the industry to total shipments of such products by all manufacturing industries.

The primary product specialization ratio measures the homogeneity of each 4-digit industry only in terms of the final products of its establishments. The industry may lack high homogeneity, and many of them do, in other equally or more important characteristics such as processes used, materials consumed, etc. There is substantial variation in types of produc-

tion processes and in the degree of integration of those processes for individual plants within separate S.I.C. industries throughout the classification structure. This may occur because of the variety of products falling into a single industry classification, e.g., industries such as photographic equipment, scientific instruments and toys. However, even where the primary products of the industry are reasonably narrowly defined, the processes carried on by particular establishments in the industry may be markedly different.

There are many examples of diversity of manufacturing operations among establishments in an industry. In the Woolen and Worsted Fabrics Industry, some of the plants perform all the operations from processing the raw fiber to the finishing of the fabric whereas other plants in the same industry limit their activities to weaving the fabric. In the metal fabricating industries, plants may operate a wide variety of metal processing departments (e.g., foundry, machine shop, plate fabrication) or may be solely engaged in the assembly of component parts purchased from other manufacturers. For example, in the refrigeration industry (Industry 3585) there are instances of almost complete integration in which the production of the compressor and condensing unit, electric motor and even the stamping of the case as well as the final assembly are all carried on at one plant. There are also strictly assembly plants and plants with various combinations of particular processes to be found in that industry.

These differences among plants in the same industry have a profound effect on the relationship between labor costs and material costs. As a consequence, in many industries there is a wide dispersion among individual establishments in such important ratios as payrolls to shipments and material costs to shipments. The 1954 Census does not provide any across-the-board measure of this diversity as it does for product mix through the specialization ratio.

For many industries, separate statistics are given on the manufacture of intermediate products for use within the same plant. This practice has been followed for many earlier censuses in the pulp and paper, textile fiber, yarn and fabric and certain chemical industries. In the 1947 and 1954 Censuses, the approach was expanded to include captive castings, motor and engine facilities and for the entire metalworking area an inquiry was added to show captive metal fabricating facilities such as stamping facilities, machine shops, and the like.

The texts in the Industry Volume describe the nature of variations in types of processes used and the production of intermediate parts and components in the same plant for those industries where such situations are especially significant. Differences in the integration of production processes, types of operations and the like should be taken into consideration together with the specialization and coverage ratios when using the industry statistics (employment, value added, materials used, etc.) and in relating these figures to the product data.

## 7. Comparability of Data with the 1947 Census of Manufactures

The 1947 figures include revisions of previously published 1947 Census totals and are comparable with the 1954 data (except as specifically noted in the tables or accompanying text.)

Two important changes were made in the scope of the 1954 Census of Manufactures which affected the comparability of State and selected industry statistics with the data from the 1947 Census of Manufactures.

(a) In the 1954 Census of Manufactures, the processing of milk (pasteurizing, homogenizing, vitaminizing, bottling) was defined as a manufacturing activity. For the 1947 Census establishments shipping any fluid milk were excluded from manufacturing industries regardless of their primary activity, in accordance with the 1945 edition of the Standard Industrial Classification Manual. Furthermore, in 1954 establishments processing and distributing fluid milk and other dairy products were classified on the basis of the primary product or activity of the establishment.

(b) In the 1947 Census of Manufactures, Logging Camps and Contractors (S.I.C. 2411) were excluded. In addition, only Sawmills and Planing Mills (S.I.C. 2421) that cut more than 200,000

board feet of lumber were included. On the other hand, for 1954, all loggers and sawmills with one or more paid employees as reported to the Bureau of the Old-Age and Survivors Insurance were included in the Census. In 1954, the loggers accounted for more than 11 percent of the national employment in Major Industry Group 24, Lumber and Wood Products. It is estimated that sawmills and planing mills producing less than 200,000 board feet accounted for less than 2 percent of national employment for the group.

The above changes have been noted in the appropriate tables and where significant, data are provided on a comparable basis for the two census years.

## 8. Geographic Areas

(a) Census divisions and regions.--In order to present census data at a level intermediate between the United States and the individual 48 States, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 Census, the nine divisions were grouped also into four major geographic regions; Northeast, South, North Central and West.

Not only are these groupings convenient for the summary presentation of census data below the U. S. level, but they are essential to presenting maximum geographic information for those individual industries in which application of the Census disclosure law precludes the publication of individual State data. (See section on "Confidentiality of Data for Individual Companies" for a discussion of the disclosure rules.) The relative importance of manufacturing in 1954 among the several States and regions is shown in Table C.

(b) Standard metropolitan areas.--In addition to the legally constituted geographic units--States, counties, and cities--"All manufacturing" totals have been tabulated for the approximately 170 standard metropolitan areas, while industry group (3-digit) statistics have been tabulated for those areas reporting at least 40,000 manufacturing employees either in 1947 or 1954. (Industry group statistics for such areas are presented in Area Volume Table 5. There are 62 areas meeting this employment criterion.)

Except in New England, a Standard Metropolitan Area is a whole county or group of contiguous counties which contain a city (or cities) of 50,000 inhabitants or more. The inclusion of contiguous counties in a Standard Metropolitan Area is determined by the application of certain criteria aimed at measuring the metropolitan character of the county or counties and the degree of social and economic integration with the central city. An area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force. A standard metropolitan area is generally more restricted than the market or trading area. In the New England States, similar integration criteria have been applied in defining standard metropolitan areas, but on a city and town, rather than on a county basis. The town is a more satisfactory statistical unit than the county in this region of the country. The Standard Metropolitan areas were defined by the Federal Committee on Standard Metropolitan Areas of the U. S. Bureau of the Budget for general-purpose use throughout the Federal government in presenting economic and social data.

The requirement that each standard metropolitan area consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined would be limited by the fact that many types of economic and social data are available only on a county basis. Moreover, so far as the Census of Manufactures is concerned, the inclusion in the metropolitan area of large tracts of agricultural or forest land is of little importance, since their contribution to the industrial activity of the area is usually negligible.

Table C.--VALUE ADDED BY MANUFACTURE BY DIVISION AND STATE, 1954

Division and State	Value added by manufacture (millions)	Per cent	Division and State	Value added by manufacture (millions)	Per cent	Division and State	Value added by manufacture (millions)	Per cent
United States, total	\$116,913	100.0	West North Central--Con.			West South Central..	\$5,721	4.9
New England.....	9,128	7.8	Missouri.....	\$2,727	2.3	Arkansas.....	457	.4
Maine.....	565	.5	North Dakota.....	35	.1	Louisiana.....	1,182	1.0
New Hampshire.....	409	.3	South Dakota.....	78	.1	Oklahoma.....	581	.5
Vermont.....	223	.2	Nebraska.....	394	.3	Texas.....	3,502	3.0
Massachusetts.....	4,356	3.7	Kansas.....	1,049	.9			
Rhode Island.....	697	.6	South Atlantic.....	10,658	9.1	Mountain.....	1,505	1.3
Connecticut.....	2,877	2.5	Delaware.....	353	.3	Montana.....	141	.1
Middle Atlantic.....	30,402	26.0	Maryland.....	1,889	1.6	Idaho.....	182	.1
New York.....	14,149	12.1	District of Columbia	157	.1	Wyoming.....	51	.1
New Jersey.....	6,331	5.4	Virginia.....	1,629	1.4	Colorado.....	472	.4
Pennsylvania.....	9,930	8.5	West Virginia.....	988	.8	New Mexico.....	126	.1
East North Central.....	36,501	31.2	North Carolina.....	2,210	1.9	Arizona.....	192	.2
Ohio.....	10,165	8.7	South Carolina.....	1,041	.9	Utah.....	276	.2
Indiana.....	4,625	4.0	Georgia.....	1,592	1.4	Nevada.....	63	.1
Illinois.....	9,669	8.3	Florida.....	798	.7	Pacific.....	11,184	9.6
Michigan.....	8,707	7.4	East South Central....	4,702	4.0	Washington.....	1,549	1.3
Wisconsin.....	3,334	2.8	Kentucky.....	1,236	1.1	Oregon.....	1,037	.9
West North Central.....	7,114	6.1	Tennessee.....	1,679	1.4	California.....	8,598	7.4
Minnesota.....	1,595	1.4	Alabama.....	1,319	1.1			
Iowa.....	1,236	1.0	Mississippi.....	468	.4			

Note: Detailed figures may not add to the totals because of independent rounding.

Each standard metropolitan area is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include a maximum of two additional city names.

(c) Principal industrial counties.--In addition to industry group (3-digit) statistics for standard metropolitan areas with 40,000 or more manufacturing employees, the Census of Manufactures presents data in Area Volume Table 6, by major (2-digit) industry groups, for each "principal industrial county." A "principal industrial county" is one having 20,000 or more manufacturing employees in either 1947 or 1954. (There are 143 counties, or their equivalents, meeting this criterion.)

Although it is not feasible to show detailed industry data for most counties because of the disclosure law, the principal industrial county statistics supplement the data for metropolitan areas in two ways: First, they provide industrial information for the principal counties of some of the smaller metropolitan areas (many of which are, in fact, one-county-areas). Second, they provide information on the variations by county in industrial structure within the larger multicounty metropolitan areas.

(d) Cities of 10,000 inhabitants or more.--As in 1947, summary totals are presented for each individual city having 10,000 inhabitants or more. No industry detail is shown for individual cities. Because of the precedence given to standard metropolitan areas and principal industrial counties, most industry data even for large cities would necessarily be withheld from publication to avoid disclosure of individual company data by subtraction.

(e) Water use regions.--To present data on water use in manufacturing, together with related Census data on manufacturing activity, the country was divided into 18 water use regions. These regions typically represented combinations of river basins. The definitions of these water use regions were developed in consultation with other federal agencies having responsibilities for water development or use and with representatives of private industry.

Boundaries of water use regions generally follow the summits of watersheds and do not follow State boundaries. For practical reasons, however, water use regions are defined in terms of whole counties. Statistics are presented in the Summary Volume for each of these regions on the ratio of gallons of water intake per employee in addition to the total gallons of water intake, source of water, etc. Similar information is also presented for selected industries and counties within the water use regions.

## 9. The Census Report Forms

Although only one report was required from each establishment in the 1954 Census of Manufactures, the diversity of manufacturing activities made it necessary to use some 200 different report forms to canvass the approximately 450 manufacturing industries. In order to obtain the data essential to the census in a manner consistent with considerations of cost and reportability by the respondent, standard forms requiring full census detail were used only for those manufacturing plants above a given size in terms of number of employees (generally six or more employees). For the numerous smaller establishments, typically having less detailed records and representing a very minor portion of manufacturing output and employment, data requirements were limited to a relatively few key items on a general short form. In the case of a few industries where such small plants typify the industry (thus accounting for a substantial portion of its total in their aggregate), modified versions of short forms were used. However, all multiplant companies were sent the appropriate standard form for each of their establishments regardless of the size of establishment.

It was possible in this Census, using the administrative records of the Bureau of Old-Age and Survivors Insurance in conjunction with existing Census records, to determine correctly, in most cases, which report form was required for each manufacturing establishment before the mailing.

Information was obtained on all 1954 forms regarding the physical location, Social Security employer identification number, company affiliation, and form of ownership. These facts not only provided for completeness-of-coverage control in the census (see section 11, Development of the Mailing List), but also permitted the classification of each establishment by geographic location and type of legal organization.

(a) Standard Forms.--Each standard form called for virtually the same general plant items--employment, payrolls, man-hours, summary of materials cost, detailed fuels and electric energy costs, horsepower of installed equipment, water usage, inventories, and capital expenditures. However, the forms differed in that detailed inquiries on the quantity and value of individual products shipped and individual materials consumed as well as miscellaneous inquiries such as types of operation, equipment, and class of customer were adapted to the individual industry or industry group. These adaptations in product and material inquiries resulted in 192 different report forms for the manufacturing industries.

(b) General Short Form.—This form, designed for establishments with less than six paid employees and not part of a multi-unit company, was an abbreviated version of the standard form requesting limited general and product information typically available from the records of smaller manufacturers. For example, only total employment and payroll figures were requested, without detail by functional class of employees (i.e., production workers, force-account construction workers, and all other employees); production-worker man-hour figures were not required. Instead of detailed information on individual products shipped, the short form requested the respondent to indicate only his value of shipments in terms of product classes, a reference list for which was enclosed to provide consistency in reporting.

(c) Modified Short Forms.—In manufacturing as a whole and in most industries, very small establishments accounted for only a minor part of employment or production. Establishments with less than six employees accounted for less than two percent of value added by manufacture. However, for a few industries, smaller plants constituted a significantly large proportion of the total. For these industries, modified short forms were used, with the same establishment type inquiries (i.e., employment, inventories, etc.) as appeared on the general short form. In the materials and product sections of these forms, however, greater detail was required, approaching the materials and product sections of the standard form counterparts for these industries. The industries covered in this manner were: Logging and Sawmills, Concrete Products, Dairy Products, and several printing and publishing industries.

In addition to the report forms described above, there were several special forms used in 1954 to obtain information on related activities of manufacturing companies.

(d) Form for Manufacturing Plants Under Construction During 1954.—This form was designed to obtain data on capital expenditures by manufacturing firms for new plants under construction during 1954 but not in operation by the end of the year. A regular census report of the type described in (a)-(c) above was not obtained from such establishments. The new plant form was sent to the 1,700 largest manufacturing firms, and to a sample of 600 other manufacturing companies. (For a discussion of the purpose and use of this form, see section 25, "Expenditures for Plant and Equipment.")

(e) Form for Separate Central Administrative Offices and Auxiliaries of Manufacturing Companies.—Separate reports for each central administrative office and auxiliary unit (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.), which served the manufacturing establishments of the company rather than the general public, were obtained from the company if they were at locations different from the establishments served or if they serviced more than one manufacturing establishment. The report form included inquiries on payrolls, employment, inventories, sales and warehouse storage space. In the manufacturing field, there were approximately 4,200 such establishments in 1954, about evenly divided between administrative offices and auxiliary units. They accounted for 470 thousand employees with payrolls of almost \$3 billion, which represents 3 percent and 4.5 percent, respectively, of the totals for all manufacturing.

The employment, payroll and other related data for separate administrative offices and auxiliaries are not included in the operating manufacturing establishment totals, either for individual industries or industry groups. The employment and payrolls of such administrative offices and auxiliaries are, however, shown separately and also included in the "all manufacturing" totals in selected tables in the Summary and Area Volumes, e.g., Table 1 of each State report.

(f) Supplemental Form for Industrial Water Use.—On all standard forms, the respondent was asked to indicate, in terms of broad size ranges, the amount of water intake at his plant during 1954. Plants indicating the use of "20 million gallons or more" were defined as large water users. Based on results in the 1953 Annual Survey of Manufactures, it was estimated that this group of plants accounted for about 95 percent

of the total use of water in manufacturing. For 1954 each large user was sent an "Industrial Water Use" form, which requested information on water intake by broad use (processing, cooling, etc.), by type of water (fresh or brackish), and by source (public or private systems) as well as the amount of water recirculated and treated. The water use statistics obtained in the 1954 Census appear in the Summary Volume only.

#### 10. Comparison with 1947 Census Report Forms

In most respects, the inquiries on the 1954 standard Census forms were similar to those of the 1947 Census. However, there were some significant differences as follows: A 1947 classification of employees distinguishing clerical and routine office workers from other non-production personnel was dropped in the 1954 Census. Also, the 1947 item, "analysis of payroll ended nearest Oct. 15th", which included an employment distribution by sex was omitted in the 1954 Census. Further, the 12 monthly employment figures requested in 1947 were reduced to 4 selected months in 1954 except for report forms for highly seasonal industries.

The two-fold distribution of inventories in 1947 (finished products and all other inventories) was expanded in 1954 to a three-fold distribution in which work-in-process inventories were requested as a separate figure. On the other hand, the capital expenditures inquiry was abbreviated by the elimination of the subclasses under expenditures for new plants ("buildings" and "other construction") and by dropping of the subclasses under expenditures for new machinery and equipment ("production machinery and equipment" and "other machinery and equipment").

The industrial water use and horsepower rating inquiries of the 1954 census had no counterparts on the 1947 schedules. Conversely, the 1947 inquiry on highway-type motor vehicles was omitted in 1954.

The 1947 short forms, which were used on a more limited basis (ordinarily for one-employee establishments, except for small sawmills and printing establishments for which a higher employment cut-off was used), were similar in content to the 1954 short forms. In contrast to 1954, the 1947 forms, however, did not require separate figures on cost of contract work, value of total inventories, or total capital expenditures.

#### 11. Development of the Mailing List

The basic mailing list for the 1954 Censuses of Manufactures, Business and Mineral Industries comprised all employers (except farmers, State and local governments, and other ineligible classes) who made one or more quarterly payments in 1954 under the Federal Insurance Contributions Act. The list, which was obtained from the Internal Revenue Service (IRS) of the Treasury Department, contained all of the information necessary for mailing the Census questionnaires except the industry classification of the employer.

The IRS list was matched with various lists containing the industry code number (Standard Industrial Classification) which was required for selection of the appropriate Census report form. The matching operations done mechanically on punch card collating equipment, were made possible by the fact that both the IRS list and the classified lists contained the Social Security employer identification (E.I.) number.

While the IRS list was the basic control mechanism for the Census of Manufactures, the mailing list for the 1953 Annual Survey of Manufactures was the principal device for mailing to large companies. This survey included all large manufacturing establishments (i.e., those with 100 or more employees), which in 1954 accounted for 74 percent of total employment. For smaller establishments, the principal source of industry codes was the "employer master file" of the Bureau of Old-Age and Survivors Insurance (BOASI) of the Social Security Administration. The latter file was supplemented by independent lists for two industrial areas, apparel jobbers and milk bottlers. (The apparel jobber information came from a census commodity survey; the dairy list from an industry source.)

Further mailing list supplementation was necessary for "Multi-unit" companies—those with more than one manufacturing, mining or business establishment. In addition to the 1953 Annual Survey of Manufactures, which provided the principal source of information regarding manufacturing plants of multiunits, a limited pre-canvass was conducted by use of Form NCX-1. This form was sent to about 7,000 large companies and called for a listing of subsidiary corporations. The questionnaires for the smaller multiunits were selected on the basis of BOASI information.

Concerns having Employer Identification (E.I.) numbers on the IRS list which did not match the classified lists, and cases where the E.I. numbers matched but the classified lists did not provide sufficient information for selection of a specific questionnaire, were canvassed by means of a general schedule (NCX-3). The industry code of employers thus canvassed was assigned after receipt of the NCX-3 form on the basis of the information reported on that form. When the establishment filing the NCX-3 form was large or where otherwise necessary, additional information was obtained to complete the appropriate inquiries for the industry to which the establishment was assigned.

In the 1954 Census the report forms were distributed and returned by mail. Personal or telephone contact was made only when the manufacturer failed to respond to the initial request or to followup letters. All forms for larger establishments (in general, those with 6 or more employees) were mailed and the followup was controlled from Washington. Questionnaires for smaller establishments were mailed and controlled in the Census Bureau field offices.

## 12. Completeness of Coverage

For the 1947 Census, coverage was checked by an intensive field study of sample geographic areas, designed to measure losses due both to deficiencies in the original mailing list and to errors in processing (e.g., industry coding) after the questionnaire had been mailed and received. The results of this study indicated that 98.2 percent of the total manufacturing employment and 98.7 percent of total wages and salaries were covered in the 1947 Census statistics. The undercoverage was largely limited to small establishments and was of some importance in industries where establishments frequently combine manufacturing and merchandising activities (for example, production of prepared feeds combined with the retailing of farm supplies). Establishments operating during only part of the Census year, and unincorporated enterprises, constituted a significant proportion of those establishments omitted from the Census totals.

Since deficiencies in the 1947 mailing list were largely responsible for the relatively small "losses" incurred that year and since the 1954 mailing list was considered to be complete, no field coverage check was conducted for the 1954 Census. At various stages of processing of the reports, instead, coverage checks were conducted with the aim of determining whether establishments on the original mailing list were represented in the processing stage under scrutiny. For example, one such check indicated virtually complete mailing of reports to all names on the mailing list. The omissions brought to light through these checks were corrected, (i.e., either the missing reports were located or new reports were obtained). A final check, conducted after the close of collection operations, evaluated completeness of coverage of all establishments in the BOASI files with more than 100 employees. As a result, "missing" establishments in this size group were restored to the tabulations. This final over-all check was not extended to smaller establishments, but a few instances of omission of smaller establishments were discovered and corrected during the review of the Census tabulations.

A large proportion of the omissions discovered (and corrected) among establishments with more than 100 employees was attributable to difficult problems of coverage control among multi-establishment companies. Coverage control was much less difficult for "independent" establishments (companies with only one manufacturing location) and for this reason it was assumed that the

loss rate among small establishments which are largely "independents", was insignificant.

## 13. Manufacturing Employees—Classifications Used

(a) All employees.—The category "all employees" comprises all full-time and part-time employees on the payrolls of operating manufacturing establishments who worked or received pay for any part of the pay period ended nearest the 15th of the months specified on the report form. Included are all persons on paid sick leave, paid holidays and paid vacation during these pay periods; excluded are members of the armed forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms, are, however, excluded from the total. Employment at separate administrative offices and auxiliary units is excluded from this category. (See 13b below.)

This total of manufacturing employment is divided into three standard functional classifications (in accordance with the Bureau of the Budget's Standard Specifications for Employment Reports of November 1955, for use by manufacturing establishments in reporting employment, payrolls, and man-hour data), as follows:

Production and related workers.—Workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plants' own use (e.g., power plant), record keeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level are excluded from this category.

Force-account construction workers.—Employees on the payroll of the manufacturing establishment who are engaged in the construction of major additions or alterations to the plant and who are utilized as a separate work force. (Workers engaged in regular maintenance and repair operations are not included here but are classified in the "production and related workers" category.)

All other employees.—Nonproduction personnel of the manufacturing establishment, including those engaged in the following activities: factory supervision above the working foreman level, sales (including driver salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, finance, legal, personnel, etc.

(b) Central Administrative Office and Auxiliary Unit Employees.—For the 1954 Census, respondents were asked to report separately any central administrative offices or auxiliary units that were at a different location from the establishments served or at the same location as one of these establishments but not operated as an integral part thereof and administered or served two or more establishments. The functions of employees in central administrative offices include: general company policy determination, planning and management (i.e., company purchasing, accounting, general engineering, direction of company personnel matters, and legal and patent matters). Auxiliaries are storage facilities, garages, repair shops, purchasing offices, sales promotion offices, and research laboratories, serving the plants or central management of the company. Employment and payrolls totals for the central administrative offices and auxiliaries are included in certain tables in the Area and Summary Volumes (see section 9e for additional discussion).

## 14. Manufacturing Employees—Average Employment

In the 1947 Census, the statistics "all employees, number" and "production workers, number" represented averages of reported employment of the mid-month pay period for the 12 months of the year. The 1954 Census report forms requested employment figures for only four selected pay periods (i.e.,

midmonth employment in March, May, August, and November) in all but seasonal industries.

This latter approach was initiated in the intercensal Annual Survey of Manufactures to simplify the schedule format and lighten the reporting burden of respondents, inasmuch as it was found that the average of these selected pay periods approximates very closely the average that would be obtained from the 12 monthly pay periods for almost all industries. A study of the 1947 Census data indicated that the difference between average employment based on the specified 4 pay periods and average employment derived from 12 monthly figures was less than one percent for 376 of the 452 manufacturing industries and less than 3 percent for 442 industries, or 98 percent of all industries. The remaining 10 industries showed a variation of 3 to 9 percent.

In the 1954 Census, the midmonth pay period of the middle month was used for the last three quarters of the year. For the first quarter of the year, however, the mid-March, rather than mid-February, pay period was selected in order to tie-in with the identical pay period for which employment data are reported to the Bureau of Old-Age and Survivors Insurance. This permits coordination of Census and BOASI establishment employment records, both for the purpose of a census "universe" control in census years, and in intercensal years for the tabulation of "County Business Patterns" data which are directly comparable with the Annual Survey of Manufactures estimates for industry groups, States and geographic divisions. Further analysis of the 1947 Census disclosed virtually no change in the 4-month employment average by selecting mid-March rather than mid-February as the representative pay period for the first quarter.

In the 1954 Census, therefore, the four selected pay periods mentioned above were used on all census report forms, except 15 covering 40 seasonal industries. A supplemental inquiry was included on the report form for such industries, requiring the midmonth total employment for each of the 12 months of the year. For this purpose, seasonal industries were defined as those in which one of the following conditions held in any one of the years 1947, 1950 or 1952:

(a) Average annual employment based on March, May, August and November differed by 2 percent or more from the average based on all 12 months of the year.

(b) The ratio of employment in the lowest of the 12 months to employment in the highest month fell below 75 percent.

#### 15. Manufacturing Employees--Payrolls

This total includes the gross earnings paid in the calendar year 1954 to all employees on the payroll of operating manufacturing establishments. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. It includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and saving bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners. Also excluded are payments to members of armed forces and pensioners carried on the active payroll of manufacturing establishments.

The 1954 Census definition of payrolls, identical to that recommended to all Federal statistical agencies by the Bureau of the Budget, is also the same as the 1947 Census definition. It should be noted that this definition does not include employers' Social Security contributions, or other nonpayroll labor costs such as employees' pension plans, group insurance premiums, and workmen's compensation. Force-account construction worker wages are included in total payrolls even though such wages are a cost charge to the manufacturer's capital account rather than a current production cost. However, these wages represent an inconsequential fraction of total manufacturing payrolls, as most construction of new plants or additions to existing plants is performed on a contract basis, either by independent construction firms or separate construction subsidiaries of manufacturing concerns.

As in the case of employment figures, the payrolls of separate central administrative offices and auxiliary units of multiestablishment companies are not included in the totals for individual industries or industry groups but are shown in table 1 of each State report and selected other tables in the Area and Summary Volumes.

#### 16. Production and Related Worker Man-Hours

This total consists of all plant man-hours of production and related workers as defined above. It represents all man-hours at the plant worked or paid for, including actual overtime hours (not straight-time equivalent hours). It excludes hours paid for vacations, holidays, or sick leave, when the employee was not at the plant. Where employees elected to work during the vacation period, only actual hours worked by such employees were reported.

The production worker man-hours total for an industry, as collected in the Census, provides a comprehensive measure of labor input, taking into account both the number of production workers and their actual hours of work.

As in the 1947 Census and subsequent Annual Surveys, 1954 man-hours data were requested by quarter for the calendar year, on the basis of 1947 Census pretests. These pretests indicated that quarterly data could be reported more readily than either monthly or annual data. The man-hours figures issued by the Census differ from those published monthly by the Bureau of Labor Statistics which cover all hours paid for, whether or not worked, and relate only to the payroll period ending nearest the middle of each month. The 1954 Census definition of man-hours (i.e., all man-hours at the plant, including "stand-by" hours paid for) is a clarification, without altering the desired concept, of the 1947 definition which simply called for all man-hours worked.

Man-hours were generally well reported except in the case of small establishments which, as in the 1947 Census, experienced some difficulty in distinguishing between production and other types of workers, and except for some industries like apparel where work is commonly performed on a piece rate basis. Where man-hours were not reported and it was not feasible to obtain the information by correspondence, the data were estimated. Because this estimating was largely confined to small establishments, there is no significant qualification to the validity of overall industry and geographic area totals for man-hours, except for sawmills and a few other industries characterized by small establishments or by other limitations in their record-keeping affecting the reporting of man-hour information. However, the man-hour figures for establishments with fewer than 10 employees, shown in the Size of Establishment chapter of the Summary Volume, should be interpreted with this factor in mind.

#### 17. Cost of Materials, etc., Consumed

A summary inquiry on the 1954 Census report forms requested information on the cost of materials, supplies, semi-finished goods, fuels and electric energy, actually consumed or put into production during the year, whether purchased, withdrawn from inventories, or received from other establishments of the company, as well as the cost of contract work. "Cost" refers to direct charges actually paid or payable for items consumed or put into production during the year, after discounts, and including freight charges and other direct charges incurred by the establishment in acquiring these materials.

Under the general heading "Cost of materials, etc." separate figures were obtained for (a) the total delivered cost of all raw materials, semi-finished goods, parts, components, containers, scrap, and supplies consumed or put into production; (b) the amount paid for electric energy purchased; (c) the amount paid for all fuels consumed for heat, power, or the generation of electricity; and (d) the cost of work done by others on materials or parts furnished by the reporting manufacturing establishment (contract work). The cost of materials figure published for each industry does not include the separately reported cost of products bought and resold in the same condition; also, it excludes the cost of purchased services, such as advertising, insurance, telephone, and research; it excludes overhead costs,

such as depreciation charges, rent, interest, etc.; it excludes materials, machinery and equipment used in replacement or expansion of plant or capitalized repairs which are chargeable to fixed assets accounts.

Where the respondent's records did not show the actual amounts consumed or put into production during 1954, he was permitted to enter purchase figures provided purchases closely approximated consumption during the year. For minor materials and supplies, the substitution of purchase records was accepted regardless of the variation between purchases and consumption. If for any major material, however, the two measures differed significantly, the manufacturer was instructed to derive an estimated consumption figure by adding purchases (or receipts) to amounts on hand at the beginning of the year and subtracting amounts on hand at the end of the year. While it was not feasible to audit the resulting figures reported for materials and supplies consumed, enough checks of consistency were made so that it is believed that the aggregates reported are close approximations of actual consumption.

In the case of materials received from other plants of the same company or from a central materials depot (whether at the same or different physical location), the respondent was asked to approximate the commercial value of these materials, including freight and other direct handling charges. For some industries in which there was no satisfactory market counterpart of the transferred material, special instructions were necessary. The respondent was also asked, where possible, to check that such approximated costs exceeded the value of shipments reported by the company's plant producing and transferring the goods only by the addition of freight and other direct charges.

It should be noted that the cost of fuel consumed under (c) above (including anthracite and bituminous coal, natural and manufactured gas, fuel oil, liquefied petroleum gas, and other fuels) does not include fuel used as a material in the manufacturing process, for example, coal used in the production of coke. Such costs were included with other materials costs in category (a) above.

A summation of industry figures for cost of materials would result in large and unknown amounts of duplication in industry group totals, owing to the addition of costs reported by related industries engaged in successive fabrication stages in the production of finished manufactured products. For this reason, cost of materials figures are not shown at the industry group (3-digit) and major industry group (2-digit) levels. With some important exceptions (such as Blast Furnaces and Steel Mills, Radios and Related Products, and Motor Vehicles and Parts), this duplication is not significant within individual industries.

#### 18. Individual Materials Consumed

In addition to the total cost of materials, fuels, etc., which every establishment was required to report, quantity and cost information was collected on the use of 433 specific materials. Consumption information was also collected for an additional 762 items as part of the product sections of the report forms. The latter group typically consisted of items which were produced and also consumed by the producing establishments or by other establishments in the same industry. For example, many chemical plants produced a basic chemical and then used it in further processes. Also in the steel industry, data on receipts and consumption of mill shapes were obtained as part of the inquiry calling for the production and shipments of these shapes.

Materials were covered in two ways. For 230 materials, every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least ninety percent of the total consumption by manufacturing industries. For the remaining 203 materials, information on consumption was obtained on a more limited basis, generally only from those industries in which the materials were an important part of total material costs. Of the 762 products for which consumption information was obtained, industries accounting for ninety percent or more of manufacturing consumption were covered for about 300 items.

Because American industry uses an enormous variety of materials, the number of materials for which "complete" coverage consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was therefore based on the following criteria:

- (1) The importance of the material as measured by the total value of United States consumption of the material
- (2) The percentage of total consumption accounted for by manufacturing establishments
- (3) The availability of consumption information from manufacturers' records
- (4) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited coverage basis were chosen not only because they constituted important inputs for particular industries but, frequently, because they provided necessary classification-type information and other indirect measures. For example, an industry's production was of a heterogeneous character and materials consumed afforded a better measure of physical output than could be obtained from available production data.

Tabulated data on the materials consumed in an industry are usually shown in the report for that industry. In addition, for the 230 materials covered on a complete basis (see above), consumption by all industries and, frequently, by States is shown in the Summary Volume. The data on materials consumed relate generally to the quantity and cost of materials purchased from other companies or obtained from other plants of the same company. However, for selected materials which are also importantly produced for use within the same establishment, information was requested on such captive production in quantity terms only.

Some undercoverage exists in the statistics for most individual materials. This undercoverage results from the fact that:

- (1) Individual materials consumption information was obtained only from establishments using one of the Census of Manufactures standard forms. For the most part, therefore, plants with fewer than six employees are not represented in the statistics. A rough indication of the effect of short forms on the materials covered can be derived from an analysis of the size of establishment tables which appear in the industry reports in the Industry Volume and in a separate chapter of the Summary Volume.
- (2) Establishments consuming less than a specified amount of a material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000.

The use of such cut-offs, as well as short forms, is not believed to have had a significant effect on the totals for most materials. However, for industries where a sizeable proportion of the activity is accounted for by small establishments or where a specified material is used in relatively small quantities, the above limitations may be of some consequence.

In the area of metal mill shapes and castings, the minimum amounts to be reported separately in the 1947 Census were 50 tons for carbon steel shapes, 25 tons for alloy steel and 10 tons for stainless steel, nonferrous mill shapes and castings. The reporting cut-off for each of these metals in 1954 was \$5,000. Because of the dominance of large consuming establishments in the totals for these materials, however, the effect of the difference in cut-offs between the two years is believed to be negligible.

#### 19. Value of Shipments

The amounts under value of shipments both for industries and for individual products or classes of products are the received or receivable net selling values, f.o.b. plant, after discounts and allowances, and excluding freight charges and excise taxes.

However, where the products of an industry are customarily delivered by the manufacturing establishments (bakery products, fluid milk, soft drinks, for example) the value of shipments is based on the delivered price of the goods rather than the f.o.b. plant price. For the tobacco and other industries where excise taxes are important, such taxes are covered separately.

Under the general heading of shipments, manufacturers were asked to include all items, made by or for each establishment from materials owned by it, whether sold, transferred to other plants of the same company, or shipped on consignment. Also included were receipts for contract work and for such miscellaneous activities as sale of scrap and refuse, installation work by manufacturing plant employees, research and development work, and repair work. The net selling value of products made in one plant on a contract basis from materials owned by others was reported by the plant providing the materials. The value of products bought and resold without further processing (merchandising) was reported separately and is excluded from the value of shipments figures shown in all tables; the value and cost of resales are, however, shown separately in table 3 of the Industry Volume.

In the case of multi-unit companies, the manufacturer was requested to report the value of products transferred to other establishments of the same company (i.e., other manufacturing plants, separate sales branches, or retail stores) at "the nearest approximation to corresponding commercial values, f.o.b. plant, and not the cost of production."

The industry "value of shipments" is necessarily different from the value of shipments of the group of products regarded as "primary" to the industry. The value of shipments of primary products of an industry (Tables 5 and 6 of the Industry Volume) includes the value of such products reported by all producers, including those establishments in other industries which make these items as "secondary" products. However, that value does not include the value of secondary products of establishments classified in the industry, nor receipts of such establishments for contract work and other miscellaneous activities. The general use of shipments as the basis for valuing the output of manufacturing industries differs from the practice for all censuses except those for 1947 and 1929. The selection of shipments in recent censuses was made in order to facilitate direct reporting from records of sales, shipments, or billings. Value of shipments for 1954 and 1947 may, however, be directly compared with value of products for earlier years. In the first place, it is likely that in earlier censuses many manufacturers valued their output in terms of shipments even though value of production was requested. Secondly, the changes in the value of finished goods inventories for most industries were of minor importance and there was, therefore, little difference between production and shipments in 1954, 1947, and 1939 Censuses. The "value of production" was requested in the 1954 Census for a relatively few industries where such records are generally maintained in place of shipment figures and reporting of the latter would have involved undue difficulty for the respondent. These instances are noted in the tables and descriptive text for the industries involved.

## 20. Individual Products

For 1954, as for 1947, data were collected for almost all industries on the quantity and value of individual products shipped. In the 1954 Census, information was collected on the output of approximately 7,000 individual product items. The term "product" as used in the Census of Manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. For example, all grades of automotive gasoline were reported as a single item. On the other hand, cotton broad-woven goods were distributed into nearly 200 items.

The list of products for which separate information was collected in the 1954 Census was based on the product categories selected for the 1947 Census of Manufactures after extensive consultation with industry and government representatives. This 1947 Census list was reviewed in preparation for the 1954 Census

and modifications were made in many instances, although less extensively than in 1947. In readjusting the list of products, comparability with previous figures was given considerable weight. Comparable 1947 information is presented for most products, therefore, at some level of detail.

Typically, quantity and value of shipments information was collected for each product. In some cases quantity was not significant or could not be reported by manufacturers, largely because of the wide range of sizes, prices or different types of products included in the category. For these products, only value of shipments was collected. Shipments include both commercial shipments and transfers of products to other plants of the same company. For products for which a considerable portion of the total shipments is transferred to other plants of the same company, separate information on such interplant transfers was also collected. Moreover, for products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total production and often consumption of products produced in the same establishment were collected. Production data were also collected for products for which there are significant differences between total production and total shipments. Other measures of output of products, such as "value of work done" for products with long production cycles, were used as appropriate and feasible.

## 21. Classes of Products

For the purpose of summarizing the product information, the separate products were aggregated into "classes of products" which were in turn grouped into all "primary" products of each industry. The code structure used is a 7-digit number for the individual products, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry.

The 7,000 product items in the 1954 Census were grouped into approximately 1,000 separate classes on the basis of general similarity of manufacturing processes, types of materials used, and the like. However, the grouping of products was affected by the economic significance of the class, and in some cases, dissimilar products were grouped because they were not sufficiently significant to warrant separate classes.

The product class was developed in order to provide an intermediate level of classification for output information. Because of the reduced number of separate items and the increased number of companies producing the class of products, additional tabulations of output information, e.g., product class by State (table 6B of the Industry Volume) are feasible more frequently than would be possible for individual products. The increased number of companies minimizes the problem of protection against disclosure of individual company information and the smaller number of items (product classes) reduces the cost of tabulation.

## 22. Duplication in Cost of Materials and Value of Products

The aggregate of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries includes large amounts of duplication owing to the use of products of some industries as materials by others. With some important exceptions, such as Motor Vehicles and Parts, this duplication is not significant within individual industries but arises from the addition of statistics for related industries representing successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the Food Group and the addition of pulp mills to paper mills in the Paper and Allied Products Group of industries. Estimates of the over-all extent of this duplication indicate that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of products reported in the Census of Manufactures. Because of the unknown and varying amounts of duplication contained in cost of materials and value of products, these figures are not shown for groups of industries or for geographic areas in this census and are also eliminated for approximately a dozen individual industries containing significant amounts of duplication.

Even where no significant amount of duplication is involved, value of shipments figures are deficient as measures of the relative economic importance of individual manufacturing industries or geographic areas, because of the wide variation in ratio of materials costs to labor and other processing costs, both among industries and within the same industry.

### 23. Value Added by Manufacture

This measure is derived in the 1954 Census (as it was in the 1947 Census and intervening annual surveys) by subtracting the cost of materials, supplies, containers, fuel, purchased electric energy, and contract work, from the value of shipments of manufacturing establishments. It avoids, therefore, the duplication in the value of shipments figure which results from the use of products of some establishments as materials by others. It is considered to be the best value measure available for comparing the relative economic importance of manufacturing among industries and geographic areas.

Value added by manufacture should not be confused with "national income originating in manufacturing," as presented in the national income estimates compiled by the Office of Business Economics, Department of Commerce. The latter measure is the sum of factor costs incurred by an industry in production. It excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc. It is, therefore, a more "net" concept of value added than that used in the Census of Manufactures.

In part, the "national income originating" estimates are prepared from company rather than establishment data. This results in the inclusion of some part of the net value added (or a logical approximation of it) by nonmanufacturing establishments of companies classified as being primarily manufacturing; and conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases income originating. (In fact, in the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one major industry group in which O.B.E. "income originating" exceeds Census "value added by manufacture.") Many of the items that must be deducted from "value added" to arrive at an income originating figure can be reported on an establishment basis only with considerable difficulty, if at all.

Another distinction between the Census value added and O.B.E. income originating statistics arises from the treatment of net changes in inventories of work-in-process and finished goods. The census figure is based on shipments, and hence does not reflect net changes in these inventories during the year. The O.B.E. estimate makes allowance for inventory changes.

For industries in which intra-company transfers constitute a significant part of total cost of materials or value of shipments, the Census value added is subject to certain limitations arising from the assignment of values to the products transferred. To the extent that manufacturing companies assign to products shipped from one establishment of the company (classified in Industry A) to another (in Industry B) values that reflect only cost of production without adequate allowance for overhead and profit, the value added in Industry A will be understated whereas that for Industry B will be overstated. For related groups of such industries and for manufacturing as a whole, this imbalance cancels out, of course, and the aggregate value added is without distortion due to problems of transfer valuation.

In the calculation of value added for the 1954 Census and prior years, products bought and resold in the same condition (resales) are excluded from both the value of shipments and the cost of materials, etc. However, value added by manufacture including value added by resale and the net change in work-in-

process and finished product inventories is shown for 1954 in a special table in the Summary Volume. It is planned that this more comprehensive concept will be followed in future censuses and annual surveys of manufactures.

### 24. Inventories

The value of beginning-of-year and end-of-year inventories held by each manufacturing establishment, except for those in Printing and Publishing, was obtained in the 1954 Census. Based on the successful experience in the 1953 Annual Survey of Manufactures, separate inventory figures were requested for: (1) finished products; (2) work-in-process; and (3) materials, supplies, fuel, and other inventories. In the earlier Annual Survey years and in the 1947 Census, inventory data had been collected for only two major categories: (1) finished products and (2) work-in-process, materials, supplies, and other inventories.

Respondents were asked to report their inventories at approximate current costs if feasible; otherwise "at book values." Since different methods of inventory valuation are used (LIFO, FIFO, etc.) the meaning of the value of inventories aggregate for all establishments in an industry is not precise. The figures on change in inventory between the beginning and the end of the year are of considerable significance.

Establishments were asked to report total inventories and a distribution of inventories by materials, work-in-process, and finished goods. However, an item treated as a finished good by an establishment in one industry may be reported as a raw material by another establishment in a different industry. For example, the finished product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and all manufacturing which are merely aggregates of figures reported by establishments in specified industries. It should be noted further that the total finished goods inventory for all manufacturing includes items that are not finished manufactured products.

For a few industries in the food group there are special problems in the handling of inventories by stage of fabrication. These are industries in which the products are usually stored under controlled conditions and the products are aged. Included among such types of products are stemmed and dried tobacco, cheese, and whiskey. It is not clear whether such products should be treated as finished goods inventories or as work-in-process while in storage. In all of these industries substantial finished goods inventories have been reported. These data have been summarized in the inventory tables in a consistent manner for all of the years included in this report. The Census Bureau is investigating this problem further.

The total end of 1954 inventory of \$40.3 billion reported in the Census of Manufactures by manufacturing establishments is lower than the total inventory of \$43.5 billion estimated for manufacturing companies by the Office of Business Economics for the same date. This difference is mainly attributable to the fact that the Census of Manufactures total includes only the inventories of manufacturing establishments while the O.B.E. inventory is a total for manufacturing firms. The sales branches alone, among the nonmanufacturing establishments of manufacturing companies, reported inventories of \$2.2 billion in the 1954 Census of Wholesale Trade.

### 25. Expenditures for Plant and Equipment

In the 1954 Census, manufacturers were asked to report expenditures made during the year for permanent additions and major alterations to their plants, as well as for machinery and equipment purchases, that were chargeable to fixed-asset accounts of manufacturing establishments and were of a type for which depreciation accounts are ordinarily maintained. Capital expenditures during 1954 were to be determined by the following computation: additions completed during the year, plus construction in progress at the end of the year, minus construction in progress at the beginning of the year. Expenditures for machinery and equipment were to include those made for re-

placement purposes, as well as for additions to plant capacity. Excluded from such expenditure totals are costs of maintenance and repairs charged as current operating expenses. Also excluded are expenditures for land and expenditures made by owners of plants and equipment leased to manufacturers.

In addition to total capital expenditures, respondents were requested to indicate the following subtotals: (a) new structures and additions to plant (including major alterations and capitalized repairs and improvements); (b) new machinery and new equipment (including capitalized repairs and improvements); and (c) expenditures for used plant and used equipment acquired from others (including the United States Government). This three-fold breakdown of capital expenditures, also used in the 1949-1953 Annual Surveys, represents a contraction of the detail obtained in the 1947 Census when item (a) above was subdivided into buildings and other construction, and item (b) into production machinery and other machinery. The publication of statistics on capital expenditures is generally confined to new plant and equipment (items (a) and (b) above).

In the 1947 Census and the 1949 and 1950 Annual Surveys, data on capital expenditures related only to manufacturing establishments that were in operation at some time during the report year. They did not include expenditures incurred during the year for constructing and equipping new plants not yet in operation, or for renovating idle establishments. To close this statistical gap, such supplemental capital expenditures data were obtained in the 1951-1953 Annual Surveys, and again in the 1954 Census, by means of a special company report form. The 1954 report form (Form MC-D3) collected capital expenditures detail for each manufacturing plant under construction or renovation from the approximately 1,700 largest manufacturing companies. In addition, reports were obtained from about 600 smaller companies, selected as a representative sample of all other manufacturing concerns. Based on the 1951-1953 Annual Survey experience, the relative contribution from such smaller companies to this "under construction or renovation" segment of expenditures is ordinarily less than one-tenth of the estimated total.

The capital expenditures figures in the Industry and Area Statistics Volumes do not cover idle plants and plants under construction that were not put into operation within the year 1954. Data on this type of capital outlay are shown by industry group and by State in Volume I, Summary Statistics.

The census figures on capital expenditures differ from those estimates published from the joint Office of Business Economics-Securities and Exchange Commission sample survey. In addition to the sampling variation present in the latter data, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments, whereas the OBE-SEC series on expenditures, covers all establishments, manufacturing and nonmanufacturing, of companies classified as manufacturing concerns. This factor is particularly important in the petroleum industry, where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. The OBE-SEC series excludes from the totals for manufacturing industries firms which operate manufacturing establishments but are primarily nonmanufacturing companies. Both series, it should be noted, exclude expenditures for plant and equipment at establishments owned by the Federal Government but operated under lease or contract by private companies.

## 26. Fuels, Electric Energy, and Water

Detailed statistics on use of fuels by manufacturing establishments for power and heat were collected in the 1954 Census of Manufactures. Separate figures were collected for coal, coke, fuel oil, gas, and other fuels. For each of the fuels with the exception of "other" fuels, both quantity and cost were collected. For "other" fuels, only cost was collected. The fuels reported in this inquiry exclude those used by manufacturing establishments as a raw material. For example, coal consumed in the manufacture of coke is not included in the fuel statistics.

However, data on such consumption are included in the materials consumed tables in the Industry and Summary Volumes.

Data were also collected on the use of electric energy in manufacturing. Separate figures were collected for the quantity and cost of electric energy purchased, the quantity of electric energy generated, and the quantity and value of electric energy sold.

Statistics on the industrial use of water were collected in 1954 for the first time in a Census of Manufactures. Comparable water use information had been obtained as part of the 1953 Annual Survey of Manufactures to meet a growing need for data on this important natural resource. (See Section 9f.) The water use statistics are shown by industry, State and water use region in Volume I, Summary Statistics.

## 27. Horsepower of Equipment

For the first time since 1939, statistics on horsepower rating of power equipment were collected. Such information had been requested prior to 1939 in periodic censuses as far back as 1869.

For prime movers, separate statistics in terms of total horsepower rating were collected for movers driving generators and movers not driving generators. Similarly, the horsepower rating of electric motors (excluding fractional horsepower motors) was obtained. In order to derive a measure of aggregate horsepower, the figures for electric motors were divided between motors driven by purchased energy and motors driven by energy generated within the same establishment. For establishments both generating and purchasing electric energy, the electric motor horsepower was split on the basis of the ratio of quantity of electric energy purchased to quantity generated in the establishment. The aggregate horsepower was then derived by summing the prime mover horsepower figures with the horsepower of electric motors driven by purchased energy. In this manner, duplication of horsepower between prime movers driving generators and motors driven by generated electric energy was eliminated. The problem of estimating the separation of the electric motor horsepower was limited inasmuch as the great majority of manufacturing establishments do not generate electric energy.

Horsepower of stand-by equipment as well as equipment in operation at the end of the year was requested. Included were all movers and motors in mobile as well as stationary equipment. Only motors driving highway-type motor vehicles were excluded.

## 28. Selected Metalworking Operations

For all industries in S.I.C. Major Groups 34 to 37 inclusive, and Group 19, and selected 4-digit industries in Group 33, the 1954 Census of Manufactures included a special inquiry on "Selected metalworking operations" to provide a measurement of the metalworking facilities in manufacturing. The following metalworking operations were included in this inquiry: foundry (except die casting); die casting (nonferrous metal only); forging-presses, hammers, or upsetters; electroplating; galvanizing and other hot-dip coating; heat treating or annealing of metals for production purposes; automatic screw machine department; machine shop; tool and die room, if separate from machine shop; pattern shop (foundry patterns only-metal, wood, etc.); plate or structural fabrication; and stamping, blanking, forming or drawing. The number of establishments performing these operations, classified by size of the specific operation, is shown by industry in the Industry Volume and in Chapter XII of the Summary Volume and by geographic division and State in the Summary Volume. The size distribution is based on the number of production workers usually employed in the operation. In addition, the actual number of production employees is given for the total of operations usually employing 20 or more workers. A column showing total estimated production workers for all establishments engaged in each of the metalworking operations is also included in the Summary Volume chapter.

Information on these metalworking operations was obtained for practically all industries where such operations are con-

sequential. In many of these industries, however, small establishments reported on a short form that did not include the inquiry on metalworking operations. Also, a few larger establishments that filed standard forms did not report their metalworking operations. This has resulted in an understatement of the number of establishments maintaining specific operations, primarily in the smallest size class, and to a much lesser degree an understatement of the total number of production workers in the operations. An approximation of the understatement in terms both of number of establishments and total employment is provided in the appropriate tables. The employment coverage is over 90 percent for nearly all industries and close to 100 percent for the larger metal consuming industries. The coverage is highest in industries which have few establishments with less than 6 employees. This type of operations information is useful in conjunction with the specific materials consumed data and with general relationships between materials cost and value of shipments in studying the extent of integration in specific industries. Moreover, this information measures approximately the extent to which these operations, which for the most part define individual industries, are conducted by establishments classified in other industries in the metal products area.

### 29. Selected Equipment Data

Detailed data on equipment were obtained from textile mills (S.I.C. Major Group 22, except 225, 2274, 228 and 229) and oil-seed crushing mills (S.I.C. Group 288) and are shown in the sections on those industries in the Industry Volume. The textile inquiries provided an inventory of selected items of equipment used in fiber preparation, spinning, weaving, and finishing; the oil mill inquiries secured information on various types of presses and the quantities of crushed seed and oil produced.

Information on storage capacity was collected from dairies (S.I.C. Group 202), grain mills (Industries 2041-43), ice plants (Industry 2097), tobacco plants (Major Group 21), and petroleum refineries (Industry 2911). These data which were obtained primarily to supplement similar inquiries included in the Census of Business are also shown in the Industry Volume.

### 30. Distribution of Manufacturers' Shipments

Information on the volume of goods shipped to various classes of customers (wholesalers, retailers, industrial users, etc.) was collected for the 28 industries or commodity groups listed below:

Industry or Commodity Group	Related S.I.C. Industry
Confectionery	2071-72
Soft drinks	2081
Hosiery	2251, 2252
Carpets and rugs	2271, 2273
Linoleum	2274
Printing and publishing	2731
Drugs and medicines	2831, 33, 34
Paints and paint products	2851, 52, 53
Essential oils, perfumes and cosmetics	2893
Petroleum products	2911, 2992
Shoes and slippers, other than rubber	3141, 42
Heating and cooking apparatus (including electric)	3432, 3439, 3621
Service-industry and household machines	3581, 3589
Refrigeration and air conditioning equipment	3585
Storage batteries	3691
Sporting and athletic goods	3949

This inquiry was originally planned to be similar in scope to the "Distribution of Manufacturers' Sales" inquiry in the 1939 Census of Manufactures. The 1939 distribution item covered 402 of 446 industries, and the information requested was identical for all the industries covered (with slight modifications for

certain textile industries). During the clearance of the 1954 Census forms, however, the Advisory Council on Federal Reports indicated the desirability of limiting the inquiry to industries which typically maintain records of shipments by class of customer and have a diversified distribution pattern and, furthermore, of adapting the inquiry in accordance with the customer channels of the particular industry. It was suggested by members of the Council, and later confirmed by a check of the Census reports, that the 1939 inquiry was poorly reported because of the lack of standardization among records maintained by manufacturers. Extensive conferences with industry representatives were held and, as a result, the inquiry was included only on the forms for the industries listed above. The details of the 1954 inquiries adopted differed from industry to industry, although, in general, distinctions were made between (a) interplant transfers, (b) shipments to retailers, (c) shipments to wholesalers, (d) shipments to Government, and (e) export shipments. The inquiries in some instances were confined to shipments of specific commodities, and in others covered the entire shipments of the industry, including both its "primary" and "secondary" products.

### 31. Plant Specialization Data

In response to needs expressed by data users, a program of plant specialization statistics was developed for the 1954 Census of Manufactures. These data provide a more exact measurement of the relationship between the output of an industry and the statistics on employment and payrolls, cost of materials, etc., reported by the same industry. The plant specialization data (in table 8 of the Industry Volume and Chapter XI of the Summary Volume) importantly supplement the information presented in the industry tables 5A and 5B.

Specialization for an establishment is computed in two ways. The first computation is in terms of the ratio of all the primary products of the establishment to its total of primary plus secondary products. The second in terms of the ratio of the largest single product class of the establishment to its total of primary plus secondary products. Receipts for contract and commission work as well as other miscellaneous receipts are not included in the plant specialization computation. Establishments are than grouped according to their degrees of specialization at the two levels. The statistics presented in table 8 group establishments in four specialization ranges for most industries: 90 percent or more, 75-89 percent, 50-74 percent, and less than 50 percent. For each of these ranges at the two levels (all primary products and the product class), statistics are shown on employment and payrolls, value added, cost of materials, and value of shipments.

Not all industries or all product classes are included in table 8 in each of the industry chapters. Industries having a high degree of primary product specialization (90 percent or more—see table 3 of the industry chapters) and including only one product class are omitted since the statistics for the specialized establishments would be approximately the same as those for the entire industry. In addition, selected industries having more than one product class as well as particular specialization ranges within a product class may have been omitted in order to avoid disclosing individual company figures.

Certain product classes are primary to more than one industry. The industry classification of establishments primarily producing such classes of products is determined on the basis of the kind of operation performed in the establishment, e.g., making the product from purchased materials or from materials produced at the same location. In the plant specialization data (table 8), product classes primary to two or more industries are shown in each of the respective industries. For each industry, the specialization data by industry and product class include only those establishments producing the class of product in the manner defined (e.g. lubricating oils from purchased materials).

Table 8 of the Industry Volume permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or subgroup thereof. For example, where the ratios

of various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, such ratios for the industry as a whole would be importantly affected by shifts in product mix. It should be noted that for those industries in which a production process results in the manufacture of byproducts or other similarly highly correlated products which are separate product classes in the Census, the degree of specialization in each of the product classes tends to be somewhat lower.

Differences in the degree of integration of production processes within establishments are often more important than the element of product mix. No comprehensive industry by industry measure of variations in production processes among establishments is available in the 1954 Census tables. A partial measure of differences arising from this factor can be derived for some industries through the metalworking operations or other equipment data. For some other industries, data on the production and use of products within the same establishment may be used as an approximate measure (see also discussion in Section 6, Industry Classification of Establishment, concerning differences in process integration, captive production, etc.)

Statistics for establishments highly specialized in the products of their industry classification are also presented in table 3 of the Industry Volume for industries with a primary product specialization ratio of less than 90 percent. This permits a direct comparison of the statistics for the specialized establishments with the totals for the industry. However, the proportion of the total industry represented by the specialized establishments should be considered in the analytical use of the statistics for such establishments.

### 32. Imputation of Data

Each "key" census total called for on the standard forms had its counterpart in the various short forms. The short forms, however, did not require the detailed distribution of such totals (see Section 9, The Census Report Forms). It was necessary, therefore, to impute figures for these missing detail items in order to publish "universe" census totals of manufacturing activity.

Imputation of missing items was made feasible by use of the Census Bureau's high-speed electronic computer, Univac. Imputation factors (or ratios) were developed for each detailed item, taking into account a plant's industry classification, regional location, and employment size. These factors were applied by Univac against the reported total figures. For example, it was thus possible to estimate, for each establishment reporting on a short form, the number of production workers from the reported total employment figure; production worker wages were imputed from reported total payroll, and, in turn, production worker man-hours were developed from the derived production worker wages. Similarly, figures for the three-fold classification of inventories were developed from the reported total inventories. This imputation system was also applied to standard forms on which detailed items were not reported and where the total figures were too small to warrant "follow-up" correspondence on such omitted data.

Estimates of the incidence of imputation of detailed figures for short forms (as well as omitted detail for standard forms) in the 1954 Census indicate that, on the average, such imputation represents less than 5 percent of the published census totals.

For industries characterized by establishments of some size, the percentage of imputation of general measures such as employment and payrolls, cost of materials, inventories, expenditures, and the like is under 5 percent; for the industries in which

small establishments account for a significant portion of the total, the percent may go as high as 10 to 20. Of the various statistics, man-hours worked tended to have a higher degree of imputation than the other items due to certain difficulties in reporting those data by small and medium-size establishments in industries such as sawmills.

The major exceptions to the imputation procedure for missing data were the detailed products and materials, metalworking operations and equipment inquiries. The value of products and the cost of materials, parts, supplies and containers for establishments not reporting the detailed inquiries were treated as "unspecified" materials or products in the appropriate tables. For metalworking operations and equipment, the statistics were based on establishments reporting data, with appropriate measures of coverage shown in the tables.

### 33. Confidentiality of Data for Individual Companies

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In the 1954 Census, as in 1947, preference was given to geographic regions and divisions over individual States in applying disclosure rules; similarly, States took precedence over standard metropolitan areas, while such areas were given preference over counties, and counties over cities. In tables showing industry detail, major industry group (2-digit) totals were given preference over industry group (3-digit) totals which, in turn, had precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings took precedence over 5-digit product classes; the latter were given precedence over individual 7-digit products.

Such order-of-precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least important) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry group statistics over individual industries within each State, the extent to which individual States can be compared within the S.I.C. industry classification framework is greatly increased.

For each producing State not shown separately in Table 2 of the Industry Volume, a footnote gives the number of establishments and either an employment range or the actual employment figure. The employment is shown in a range if the State had less than 1,000 employees, if it represented the total for only one or two companies, or if the exact figure would permit deriving (by subtraction) the number of employees in other States represented by only one or two companies. In addition, figures for States with less than 100 employees are shown only in the footnote together with the number of establishments and employment in a range.

In the Area Volume, figures are not shown for a county or for an industry within a State, metropolitan area, or principal industrial county if the publication of such statistics would disclose information for individual companies. In table 3 of that Volume, however, the number of establishments is shown for every county and the number of employees for most counties represented by three or more companies. Moreover, all counties having manufacturing establishments are included in table 7, showing for each county the distribution by employment size of establishments in each major industry group.

For industries with few establishments or considerable geographic concentration, it has frequently been necessary to use geographic regions broader than the traditional nine census divisions, in order to show all plants by some geographic group-

ing. For this purpose the following combinations of Census divisions have been used:

NORTHEAST	SOUTH
New England	South Atlantic
Middle Atlantic	East South Central
	West South Central
NORTH CENTRAL	WEST
East North Central	Mountain
West North Central	Pacific

#### 34. Indexes of Physical Volume of Production

The Bureau of the Census, in collaboration with the Federal Reserve Board and the Bureau of Labor Statistics, is calculating indexes of the physical volume of manufacturing production for 1954 relative to 1947, primarily from the product and industry statistics published in Volume II, Industry Statistics, of the 1954 Census of Manufactures. In addition to the index for all manufacturing, separate indexes are published for over half the industries (representing more than three-quarters of the value added by manufacture) and for most of the major industry groups. The present calculations represent a continuation of the indexes for 1947 prepared jointly by the Census Bureau and the Federal Reserve Board and those for the period 1899-1939 constructed by

the National Bureau of Economic Research mainly from Census of Manufactures data. The indexes are published in the form of a separate report.

#### 35. Abbreviations

The following abbreviations and symbols occur frequently in tables and footnotes:

...	zero
xxx	Not applicable
NA	Not available
n.e.c.	Not elsewhere classified
lin.	linear
equiv.	equivalent
hp	horsepower
kwh	kilowatt-hours
D	Withheld to avoid disclosing figures for individual companies
S.I.C.	Standard Industrial Classification

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

## Chapter I.—General Summary

## GENERAL SUMMARY

Table 1A.—MANUFACTURING EMPLOYMENT IN THE UNITED STATES: 1944 AND EARLIER YEARS

(For explanation of column captions see Introduction.)

Year <sup>1</sup>	Total manufacturing employment		Employment at operating manufacturing establishments		Employment at administrative and auxiliary units	
	(Number)	Payroll (\$1,000 <sup>2</sup> )	Number	Payroll (\$1,000 <sup>2</sup> )	Number	Payroll (\$1,000 <sup>2</sup> )
1954.....	16,125,550	65,976,667	15,651,294	62,993,321	474,256	2,983,346
1953.....	17,093,004	68,590,424	16,693,076	66,492,872	399,928	2,097,552
1952 <sup>3</sup> .....	16,061,041	61,140,549	15,732,722	59,598,225	<sup>3</sup> 328,319	<sup>3</sup> 1,542,324
1951.....	15,637,957	56,283,787	15,309,638	54,741,463	328,319	1,542,324
1950.....	14,769,931	47,892,894	14,467,149	46,642,786	302,782	1,250,108
1944.....	13,880,050	42,752,032	13,566,949	41,482,008	313,101	1,270,024

<sup>1</sup>Employment data for administrative offices and auxiliaries are not available for the years prior to 1949. See Table 1B for employment data for earlier years.

<sup>2</sup>The employment figures for operating manufacturing establishments for 1949-1953 are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for these years. The employment figures for administrative and auxiliary units were compiled chiefly from Bureau of Old-Age and Survivors Insurance records and are not strictly comparable with the figures for these units that were collected by the Bureau of the Census for the year 1954.

<sup>3</sup>The 1951 data are shown for 1952 since auxiliary and administrative unit data were not compiled for 1952.

## GENERAL SUMMARY

3

Table 1B.—GENERAL STATISTICS FOR OPERATING MANUFACTURING ESTABLISHMENTS IN THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction.)

Year <sup>1</sup>	Estab- lish- ments (Number)	Proprie- tors and firm members (Number)	All employees <sup>2</sup>		Production workers			Value added by manu- facture <sup>4</sup> (\$1,000)	Capital expendi- tures, new (\$1,000)	Horsepower of prime movers and electric motors <sup>5</sup> (1,000 HP)	Index of physical produc- tion 1939=100
			Number <sup>3</sup>	Payroll (\$1,000)	Number	Man-hours <sup>6</sup> (1,000)	Wages <sup>7</sup> (\$1,000)				
Factories, excluding hand and neighborhood industries:

NA Not available.

<sup>1</sup>The 1954 figures include data for establishments engaged in the processing and distribution of fluid milk, Industry Group 202, Dairy Products. These establishments were not included in the figures for the Annual Survey years 1949-1953 or earlier Census years. In addition, the 1954 Census and Annual Survey years include data for Logging Camps and Contractors, Industry 2411, which were not included within the scope of the 1947 and earlier Censuses. See footnotes to Table 2A for comparable 1954 and 1947 totals. There were also a number of changes in the definition of manufacturing industries during earlier Census years that affect the comparability of the historical series. Among the more important of these were: figures for 1935 and later years exclude data for "Railroad repair shops" and "Manufactured gas" which were included in 1899-1933 figures; the minimum size of establishment included for 1954-1947 was one employee, for 1939-1921 manufacturing establishments reporting value of shipments of \$5,000 or more were within scope whereas for 1919 and earlier years the cutoff was \$500. (This change in procedure has not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

<sup>2</sup>The figures for 1939-1954 include data for employees at manufacturing establishments who were engaged in distribution and in construction work.

The extent to which data for such employees were included in the figures for earlier years is not known.

<sup>3</sup>The 1949 thru 1954 "Average number of employees" is based on reported employment totals for the payroll periods nearest the 15th of March, May, August, and November except for seasonal industries in 1954 when a 12 month average was used. For 1947, the number of "All employees" represents the average of 12 monthly figures; for 1939 and earlier years, it represents the sum of the average number of production workers for the year and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>4</sup>Value of products shipped less cost of materials, supplies, fuel, electric energy, and contract work. For 1849-1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

<sup>5</sup>Driven by purchased energy.

<sup>6</sup>Estimated figure based on Federal Reserve Board data.

<sup>7</sup>Data for 1949 thru 1953 are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volume for this period.

<sup>8</sup>The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous years, was \$24.7 billion.

<sup>9</sup>Not revised to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947.

<sup>10</sup>The 1939 figures for "all employees" were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: for number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

<sup>11</sup>Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

<sup>12</sup>Does not include data for electric motors.

## GENERAL SUMMARY

Table 2A.—GENERAL STATISTICS FOR OPERATING MANUFACTURING ESTABLISHMENTS

(For explanation of column captions, see Introduction.)

## GENERAL SUMMARY

Table 2A.—GENERAL STATISTICS FOR OPERATING MANUFACTURING ESTABLISHMENTS

(For explanation of column captions see Introduction.)

Industry group and industry	1954									
	Primary product specialization ratio <sup>1</sup>	Coverage ratio <sup>2</sup>	Establishments (Number)	Proprietors and firm members (Number)	All employees		Production workers			Value added by manufacturing, and in trade <sup>4</sup>
					Number <sup>3</sup>	Payroll (\$1,000)	Number <sup>3</sup>	Man-hours (1,000)	Wages (\$1,000)	
Furniture and fixtures—Continued										
252 Office furniture.....	84	87	241	113	21,652	84,826	18,170	36,447	66,140	154,566
2521 Wood office furniture.....	86	86	112	60	5,509	18,788	4,773	9,681	14,605	28,757
2522 Metal office furniture.....	84	87	129	53	16,143	66,038	13,397	26,765	51,535	125,808
253 Public and professional furniture.....	84	81	394	216	19,570	75,730	15,791	32,955	54,758	125,674
2531 Public-building furniture.....	83	86	232	174	14,044	52,638	11,556	24,120	38,905	87,446
2532 Professional furniture.....	81	68	102	42	5,526	23,092	4,234	8,834	15,853	38,228
2541 Partitions and fixtures.....	82	87	1,626	1,191	33,137	142,515	26,584	53,101	102,071	230,712
256 Screens, shades, and blinds.....	86	84	1,327	1,172	18,189	59,722	14,328	27,999	40,090	109,931
2561 Window and door screens.....	75	64	215	172	4,405	16,887	3,632	7,240	11,376	32,630
2562 Window shades.....	85	72	196	152	4,368	15,580	3,404	6,746	10,648	29,604
2563 Venetian blinds.....	85	93	916	842	9,416	27,254	7,290	14,012	18,065	47,696

## GENERAL SUMMARY

Table 2A.—GENERAL STATISTICS FOR OPERATING MANUFACTURING ESTABLISHMENTS

(For explanation of column captions see Introduction.)

Code	Industry group and industry	1954									
		Primary products specialization ratio <sup>1</sup>	Coverage ratio <sup>2</sup>	Establishments (Number)	Proprietors and firm members (Number)	All employees		Production workers			Value added by manufacture, adjusted <sup>4</sup>
						Number <sup>3</sup>	Payroll (\$1,000)	Number <sup>3</sup>	Man-hours	Wages (\$1,000)	
31	Leather and leather products.....	(NA)	(NA)	4,845	2,565	356,578	1,027,314	321,161	586,857	833,694	1,637,417
3111	Leather tanning and finishing.....	93	100	579	208	43,468	168,130	38,662	75,689	137,487	264,264
3121	Industrial leather belting.....	97	92	136	57	4,576	18,569	3,342	6,513	11,484	34,911
3131	Footwear cut stock.....	97	96	563	271	20,059	57,113	17,641	32,533	44,231	87,185
314	Footwear (except rubber).....	100	100	1,369	363	230,255	619,332	209,568	373,455	513,053	985,754
3141	Footwear, except rubber.....	99	99	1,196	291	219,375	589,267	199,907	356,681	490,742	940,704
3142	House slippers.....	99	87	173	72	10,279	30,065	9,661	16,773	22,911	45,090
315	Leather gloves.....	92	90	239	185	6,917	15,573	6,182	10,433	12,345	23,185
3151	Leather dress gloves.....	86	91	143	107	4,472	9,739	3,969	6,518	7,642	13,559
3152	Leather work gloves.....	82	81	96	78	2,470	5,834	2,212	3,915	4,702	9,626
3161	Luggage.....	94	97	497	362	15,856	51,679	13,960	27,417	39,753	89,385
317	Purses and small leather goods.....	96	96	973	710	29,544	80,434	26,693	50,978	62,947	125,517
3171	Handbags and purses.....	97	98	714	490	22,321	61,405	20,911	39,942	49,620	92,968
3172	Small leather goods.....	91	87	259	220	6,663	19,029	5,782	11,035	13,326	32,549
319	Miscellaneous leather goods.....	92	85	489	409	5,400	16,472	5,109	9,835	12,392	27,211
3192	Saddlery, harness, and whips.....	88	77	106	99	1,229	3,533	1,113	2,168	2,690	5,116
3199	Leather goods, n.e.c.....	91	82	383	310	4,611	12,938	3,996	7,667	9,702	22,095
32	Stone, clay, and glass products.....	(NA)	(NA)	11,162	7,843	491,814	1,938,085	412,031	827,012	1,496,029	3,821,659

Note: Detailed figures may not add to totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

NA Not available.

<sup>1</sup>The "Primary product specialization ratio" measures the extent to which plants classified in the industry "specialize" in making products classified as primary to the industry. That is, value of shipments of primary products of plants in the industry is expressed as a ratio of the total shipments of all products made by these establishments, (excluding "miscellaneous receipts," such as receipts for contract and commission work on materials owned by others, scrap and salable refuse, repair, etc.).

<sup>2</sup>The "Coverage ratio" measures the extent to which all shipments of primary products of an industry are made by plants classified in the industry. That is, value of shipments of the primary products made by plants classified in the industry is expressed as a ratio of the total shipments of primary products made by all producers, both in and out of the specified industry.

<sup>3</sup>For most industries in 1954 the data for "All employees" and "Production workers" are based on reported data for the payroll periods ended nearest the 15th of March, May, August, and November. For 1947 and in 1954 for industries of a seasonal type an average based on the mid-month employment for 12 months was used.

<sup>4</sup>Unadjusted value added by manufacture represents value of products shipped less cost of materials, supplies, fuel, electric energy and contract work.

<sup>5</sup>Does not include expenditures for plants under construction and not yet in operation. Figures for such capital expenditures will be shown in other tables.

<sup>6</sup>The total value of shipments figures for industry groups (2- and 3- digit) and a few individual industries (4-digit) have not been published due to the extensive duplication arising from shipments from one establishment to another in the same industry classification. (See Introduction.)

<sup>7</sup>The 1954 and 1947 "all industries" totals are not strictly comparable because of differences in scope between the two years in Major groups 20 and 24 (see footnote 8).

<sup>8</sup>Comparable data are not available due to differences in the coverage between 1947 and 1954. The 1947 Census figures exclude establishments in S.I.C. Industry 2411, Logging Camps and Contractors, which are included in the scope of the 1954 Census; the 1947 Census also excludes plants processing and distributing fluid milk which in 1954 were classified in Industry Group 202, Dairy Products. In the special comparative table below, data for these industries have been subtracted from the appropriate totals:

Industry group		Estab- lish- ments	Pro- pri- etors and firm mem- bers	All employees		Production workers			Value added by manu- facture, unad- justed	Capital expen- ditures, new
				Number	Payroll	Number	Man-hours	wages		
		Number	Number		(\$1,000)		(1,000)	(\$1,000)	(\$1,000)	(\$1,000)
1954										
20	Food and kindred products except subgroup 202, Dairy products.....	30,871	22,056	1,363,773	5,115,209	985,043	1,983,675	3,251,908	11,143,480	625,927
24	Lumber and wood products except Industry 2411, Logging camps and contractors.....	28,619	28,041	570,426	1,722,898	513,749	991,380	1,422,564	2,798,481	168,729
1947										
20	Food and kindred products except subgroup 202, Dairy products.....	34,507	28,260	1,349,100	3,559,879	1,030,356	2,208,047	2,412,296	8,427,804	737,352
24	Lumber and wood products except Industry 2411, Logging camps and contractors.....	26,312	29,272	641,799	1,351,957	601,412	1,255,102	1,191,052	2,520,402	171,574

See tables in the Dairy Products section of the Industry Volume for additional details.

## GENERAL SUMMARY

23

BY INDUSTRY GROUPS AND INDUSTRIES: 1954 AND 1947—Continued

For definitions of industries, see Appendix A—Industry Descriptions

<sup>9</sup>Includes privately owned and/or operated establishments classified in Industry Group 19, "Ordnance and Accessories." Government owned and operated establishments are excluded from the annual survey and the census data.

<sup>10</sup>For further qualifications of the ratio for this industry see Appendix A—Industry Descriptions.

<sup>11</sup>Includes data for Industry 2012, Custom Slaughterering.

<sup>12</sup>Includes data for Industry 2014, Sausage Casings.

<sup>13</sup>Less than \$500 thousand.

<sup>14</sup>Includes data for Industry 2225, Yarn Mills, silk system.

<sup>15</sup>Data for 1954 include reports for establishments which are owned by the government but privately operated and exclude data for T.V.A. The 1947 figures exclude data for government owned but privately operated establishments but include data for T.V.A.

## GENERAL SUMMARY

Table 2B.—UNADJUSTED AND ADJUSTED VALUE ADDED FOR INDUSTRIES AND INDUSTRY GROUPS: 1954

In thousands of dollars. For explanation of column captions see Introduction.)

Code	Industry and industry group	Value added by manufacture, unadjusted <sup>1</sup>	Value added by merchandising (resales)	Net change in finished products and work-in- process inventories between the beginning and end of 1954 <sup>2</sup>	Adjusted value added <sup>1</sup>
	All industries, total.....	116,912,526	1,760,131	-1,222,112	117,450,545
20	Food and kindred products.....	13,400,218	356,788	12,426	13,769,432

19--	Ordinance and accessories.....	1,769,065	9,047	-131,465	1,646,647

<sup>1</sup>Unadjusted value added by manufacture represents value of products shipped (excluding resales) during the year less the cost of materials, supplies, fuel, electric energy, and contract work. Adjusted value added by manufacture represents value of products shipped (including resales of finished products produced by other manufacturing establishments) less cost of products, materials, supplies, fuel, electric energy and contract work plus the net change in finished products and work-in-process inventories between the beginning and end of the year. All other 1954 census tables show only the unadjusted value added by manufacture figures (see Introduction-Value Added by Manufacture).

<sup>2</sup>In 1954, establishments that reported on the short form (generally those with less than six employees) were asked to show only their total beginning and end of year inventories. The 1954 totals were prorated on the basis 1954 industry averages of the establishments that reported detailed inventory by type to obtain inventory figures representing all establishments for 1954.

<sup>3</sup>The adjusted value added figures for industries classified in Major Group 27, Printing and Publishing Industries do not reflect the change in inventories between the beginning and end of the year since inventory statistics were not collected from establishments classified in that industry group.

<sup>4</sup>Includes privately owned and/or operated establishments classified in Industry Group 19, "Ordinance and Accessories." Government owned and operated establishments are excluded from the annual survey and the census data.

## GENERAL SUMMARY

Cost and quantity of purchased fuel and electricity:			Expenditures for plant and equipment, total.....do....	8,197,261	6,627,029
Fuels consumed, total.....\$1,000..	23,211,757	2,376,801	Capital expenditures, new.....do....	7,818,155	6,003,873
Bituminous coal and anthracite:			New structures and additions to plant.....do....	2,250,222	2,122,143
Quantity.....1,000 short tons..	91,457	110,869	New machinery and equipment.....do....	5,567,933	3,881,730
Value.....\$1,000..	676,804	692,827	Expenditures for used plant and equipment.....do....	379,106	623,156
Coke:			Horsepower rating of power equipment at end of 1954:		
Quantity.....1,000 short tons..	54,371	66,171	Horsepower of prime movers and electric motors driven by purchased energy.....1,000 hp..	108,362	(NA)
Value.....\$1,000..	867,865	729,403	Engines, etc., driving electric generators.....do....	20,906	(NA)
Fuel oil:			Engines, etc., not driving electric generators.....do....	14,673	(NA)
Quantity.....1,000 barrels..	185,541	166,947	Electric motors driven by purchased energy.....do....	72,783	(NA)
Value.....\$1,000..	578,220	474,945	Electric motors driven by energy generated at the establishment.....do....	19,038	(NA)
Gas:					
Quantity.....million cubic feet..	5,914,855	4,004,953			
Value.....\$1,000..	859,646	383,169			
Other fuels:					
Value.....do....	200,553	96,457			

NA Not available.

<sup>1</sup>In 1954, establishments that reported on the short form (generally those with less than six employees) were asked to show only their total expenditures for new plant and equipment, total beginning and end of year inventories and total cost of materials, supplies, fuel and electric energy. Their 1954 totals were prorated on the basis of 1954 industry averages of the establishments that reported detailed inventory expenditure, fuel, and electric energy data by type to obtain figures representing all establishments for 1954. In 1947, very small establishments that accounted for approximately 1.4% of the total manufacturing employment did not report inventory expenditure and detailed fuel and electric energy data and are not represented in the 1947 figures. See 1947 Census of Manufactures, Volume I, for a measure of undercoverage by industry.

<sup>2</sup>Detail fuel items will not add to total fuel, because only the total fuels figures were collected for major industries 23 and 27.

## GENERAL SUMMARY

Table A.—MANUFACTURING EMPLOYMENT FOR DIVISIONS, STATES AND STANDARD METROPOLITAN AREAS: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

<sup>1</sup>Employment data for administrative offices and auxiliaries on a State basis are not available for the years prior to 1949. Similar data for standard metropolitan areas are available only for 1954.

<sup>2</sup>The employment figures for operating manufacturing establishments for 1949-1953 are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volume for this period. The employment figures for administrative and auxiliary units were compiled chiefly from Bureau of Old-Age and Survivors Insurance records and are not strictly comparable with the figures for these units that were collected by the Bureau of the Census for the year 1954.

<sup>3</sup>The 1951 data are shown for 1952 since auxiliary and administrative unit data were not collected in 1952. In some instances, the figures have been withheld because the estimates did not meet publication standards.

<sup>4</sup>The employment figures for administrative and auxiliary units are included with those for operating manufacturing establishments.

<sup>5</sup>The definitions of the standard metropolitan areas are shown on pages 42-44.

## STANDARD METROPOLITAN AREAS

(As defined by the Bureau of the Budget)

- AKRON STANDARD METROPOLITAN AREA—Coextensive with Summit County, Ohio.
- ALBANY-SCHENECTADY-TROY STANDARD METROPOLITAN AREA—Consists of Albany, Rensselaer, and Schenectady Counties, N. Y.
- ALBUQUERQUE STANDARD METROPOLITAN AREA—Coextensive with Bernalillo County, N. Mex.
- ALLENTOWN-BETHLEHEM-EASTON STANDARD METROPOLITAN AREA—Consists of Lehigh and Northampton Counties, Pa.; and Warren County, N. J.
- ALTOONA STANDARD METROPOLITAN AREA—Coextensive with Blair County, Pa.
- AMARILLO STANDARD METROPOLITAN AREA—Consists of Potter and Randall Counties, Tex.
- ASHEVILLE STANDARD METROPOLITAN AREA—Coextensive with Buncombe County, N. C.
- ATLANTA STANDARD METROPOLITAN AREA—Consists of Cobb, De Kalb, and Fulton Counties, Ga.
- ATLANTIC CITY STANDARD METROPOLITAN AREA—Coextensive with Atlantic County, N. J.
- AUGUSTA STANDARD METROPOLITAN AREA—Consists of Richmond County, Ga.; and Aiken County, S. C.
- AUSTIN STANDARD METROPOLITAN AREA—Coextensive with Travis County, Tex.
- BALTIMORE STANDARD METROPOLITAN AREA—Consists of Baltimore City, Baltimore and Anne Arundel Counties, Md.
- BATON ROUGE STANDARD METROPOLITAN AREA—Coextensive with East Baton Rouge Parish, La.
- BAY CITY STANDARD METROPOLITAN AREA—Coextensive with Bay County, Mich.
- BEAUMONT-PORT ARTHUR STANDARD METROPOLITAN AREA—Coextensive with Jefferson County, Tex.
- BINGHAMTON STANDARD METROPOLITAN AREA—Coextensive with Broome County, N. Y.
- BIRMINGHAM STANDARD METROPOLITAN AREA—Coextensive with Jefferson County, Ala.
- BOSTON STANDARD METROPOLITAN AREA—Consists of all of Suffolk County; Cambridge, Everett, Malden, Medford, Melrose, Newton, Somerville, Waltham, and Woburn Cities and Arlington, Ashland, Bedford, Belmont, Burlington, Concord, Framingham, Lexington, Lincoln, Natick, North Reading, Reading, Stoneham, Wakefield, Watertown, Wayland, Weston, Wilmington, and Winchester Towns in Middlesex County; Beverly, Lynn, Peabody, and Salem Cities and Danvers, Hamilton, Lynnfield, Manchester, Marblehead, Middleton, Nahant, Saugus, Swampscott, and Wenham Towns in Essex County; Quincy City and Braintree, Brookline, Canton, Cohasset, Dedham, Dover, Medfield, Milton, Needham, Norwood, Randolph, Sharon, Walpole, Wellesley, Westwood, and Weymouth Towns in Norfolk County; and Hingham and Hull Towns in Plymouth County, Mass.
- BRIDGEPORT STANDARD METROPOLITAN AREA—Consists of Bridgeport City and Fairfield, Stratford, and Trumbull Towns in Fairfield County, and Milford Town in New Haven County, Conn.
- BROCKTON STANDARD METROPOLITAN AREA—Consists of Brockton City and Abington, Bridgewater, East Bridgewater, Rockland, West Bridgewater, and Whitman Towns in Plymouth County; Avon, Holbrook, and Stoughton Towns in Norfolk County; and Easton Town in Bristol County, Mass.
- BUFFALO STANDARD METROPOLITAN AREA—Consists of Erie and Niagara Counties, N. Y.
- CANTON STANDARD METROPOLITAN AREA—Coextensive with Stark County, Ohio.
- CEDAR RAPIDS STANDARD METROPOLITAN AREA—Coextensive with Linn County, Iowa.
- CHARLESTON (S. C.) STANDARD METROPOLITAN AREA—Coextensive with Charleston County, S. C.
- CHARLESTON (W. Va.) STANDARD METROPOLITAN AREA—Consists of Fayette and Kanawha Counties, W. Va.
- CHARLOTTE STANDARD METROPOLITAN AREA—Coextensive with Mecklenburg County, N. C.
- CHATTANOOGA STANDARD METROPOLITAN AREA—Consists of Hamilton County, Tenn.; and Walker County, Ga.
- CHICAGO STANDARD METROPOLITAN AREA—Consists of Cook, Du Page, Kane, Lake, and Will Counties, Ill.; and Lake County, Ind.
- CINCINNATI STANDARD METROPOLITAN AREA—Consists of Hamilton County, Ohio; and Campbell and Kenton Counties, Ky.
- CLEVELAND STANDARD METROPOLITAN AREA—Consists of Cuyahoga and Lake Counties, Ohio.
- COLUMBIA STANDARD METROPOLITAN AREA—Coextensive with Richland County, S. C.
- COLUMBUS (GA.) STANDARD METROPOLITAN AREA—Consists of Chattahoochee and Muscogee Counties, Ga.; and Russell County, Ala.
- COLUMBUS (OHIO) STANDARD METROPOLITAN AREA—Coextensive with Franklin County, Ohio.
- CORPUS CHRISTI STANDARD METROPOLITAN AREA—Coextensive with Nueces County, Tex.
- DALLAS STANDARD METROPOLITAN AREA—Coextensive with Dallas County, Tex.
- DAVENPORT-ROCK ISLAND-MOLINE STANDARD METROPOLITAN AREA—Consists of Rock Island County, Ill.; and Scott County, Iowa.
- DAYTON STANDARD METROPOLITAN AREA—Consists of Greene and Montgomery Counties, Ohio.
- DECATUR STANDARD METROPOLITAN AREA—Coextensive with Macon County, Ill.
- DENVER STANDARD METROPOLITAN AREA—Consists of Adams, Arapahoe, Denver, and Jefferson Counties, Colo.
- DES MOINES STANDARD METROPOLITAN AREA—Coextensive with Polk County, Iowa.
- DETROIT STANDARD METROPOLITAN AREA—Consists of Macomb, Oakland, and Wayne Counties, Mich.
- DUBUQUE STANDARD METROPOLITAN AREA—Coextensive with Dubuque County, Iowa.
- DULUTH-SUPERIOR STANDARD METROPOLITAN AREA—Consists of St. Louis County, Minn.; and Douglas County, Wis.
- DURHAM STANDARD METROPOLITAN AREA—Coextensive with Durham County, N. C.
- EL PASO STANDARD METROPOLITAN AREA—Coextensive with El Paso County, Tex.
- ERIE STANDARD METROPOLITAN AREA—Coextensive with Erie County, Pa.
- EVANSVILLE STANDARD METROPOLITAN AREA—Coextensive with Vanderburgh County, Ind.
- FALL RIVER STANDARD METROPOLITAN AREA—Consists of Fall River City and Somerset, Swansea, and Westport Towns in Bristol County, Mass.; and Tiverton Town in Newport County, R. I.
- FLINT STANDARD METROPOLITAN AREA—Coextensive with Genesee County, Mich.
- FORT SMITH STANDARD METROPOLITAN AREA—Coextensive with Sebastian County, Ark.
- FORT WAYNE STANDARD METROPOLITAN AREA—Coextensive with Allen County, Ind.
- FORT WORTH STANDARD METROPOLITAN AREA—Coextensive with Tarrant County, Tex.
- FRESNO STANDARD METROPOLITAN AREA—Coextensive with Fresno County, Calif.
- GADSDEN STANDARD METROPOLITAN AREA—Coextensive with Etowah County, Ala.
- GALVESTON STANDARD METROPOLITAN AREA—Coextensive with Galveston County, Tex.
- GRAND RAPIDS STANDARD METROPOLITAN AREA—Coextensive with Kent County, Mich.
- GREEN BAY STANDARD METROPOLITAN AREA—Coextensive with Brown County, Wis.
- GREENSBORO-HIGH POINT STANDARD METROPOLITAN AREA—Coextensive with Guilford County, N. C.
- GREENVILLE STANDARD METROPOLITAN AREA—Coextensive with Greenville County, S. C.
- HAMILTON-MIDDLETOWN STANDARD METROPOLITAN AREA—Coextensive with Butler County, Ohio.
- HAMPTON-NEWPORT NEWS-WARWICK STANDARD METROPOLITAN AREA—Consists of Hampton, Newport News, and Warwick Cities, Va.
- HARRISBURG STANDARD METROPOLITAN AREA—Consists of Cumberland and Dauphin Counties, Pa.
- HARTFORD STANDARD METROPOLITAN AREA—Consists of Hartford City and Avon, Bloomfield, East Hartford, Farmington, Glastonbury, Manchester, Newington, Rocky Hill, Simsbury, South Windsor, West Hartford, Wethersfield, and Windsor Towns in Hartford County, Conn.
- HOUSTON STANDARD METROPOLITAN AREA—Coextensive with Harris County, Tex.
- HUNTINGTON-ASHLAND STANDARD METROPOLITAN AREA—Consists of Cabell and Wayne Counties, W. Va.; Boyd County, Ky.; and Lawrence County, Ohio.
- INDIANAPOLIS STANDARD METROPOLITAN AREA—Coextensive with Marion County, Ind.
- JACKSON (MICH.) STANDARD METROPOLITAN AREA—Coextensive with Jackson County, Mich.
- JACKSON (MISS.) STANDARD METROPOLITAN AREA—Coextensive with Hinds County, Miss.
- JACKSONVILLE STANDARD METROPOLITAN AREA—Coextensive with Duval County, Fla.
- JOHNSTOWN STANDARD METROPOLITAN AREA—Consists of Cambria and Somerset Counties, Pa.
- KALAMAZOO STANDARD METROPOLITAN AREA—Coextensive with Kalamazoo County, Mich.
- KANSAS CITY STANDARD METROPOLITAN AREA—Consists of Johnson and Wyandotte Counties, Kans.; and Clay and Jackson Counties, Mo.
- KENOSHA STANDARD METROPOLITAN AREA—Coextensive with Kenosha County, Wis.
- KNOXVILLE STANDARD METROPOLITAN AREA—Consists of Anderson, Blount, and Knox Counties, Tenn.
- LANCASTER STANDARD METROPOLITAN AREA—Coextensive with Lancaster County, Pa.
- LANSING STANDARD METROPOLITAN AREA—Coextensive with Ingham County, Mich.
- LAREDO STANDARD METROPOLITAN AREA—Coextensive with Webb County, Tex.
- LAWRENCE STANDARD METROPOLITAN AREA—Consists of Lawrence City and Andover, Methuen, and North Andover Towns in Essex County, Mass.
- LEXINGTON STANDARD METROPOLITAN AREA—Coextensive with Fayette County, Ky.

## STANDARD METROPOLITAN AREAS

- LIMA STANDARD METROPOLITAN AREA—Coextensive with Allen County, Ohio
- LINCOLN STANDARD METROPOLITAN AREA—Coextensive with Lancaster County, Nebr.
- LITTLE ROCK-NORTH LITTLE ROCK STANDARD METROPOLITAN AREA—Coextensive with Pulaski County, Ark.
- LORAIN-ELYRIA STANDARD METROPOLITAN AREA—Coextensive with Lorain County, Ohio
- LOS ANGELES-LONG BEACH STANDARD METROPOLITAN AREA—Consists of Los Angeles and Orange Counties, Calif.
- LOUISVILLE STANDARD METROPOLITAN AREA—Consists of Jefferson County, Ky.; and Clark and Floyd Counties, Ind.
- LOWELL STANDARD METROPOLITAN AREA—Consists of Lowell City and Billerica, Chelmsford, Dracut, and Tewksbury Towns in Middlesex County, Mass.
- LUBBOCK STANDARD METROPOLITAN AREA—Coextensive with Lubbock County, Tex.
- MACON STANDARD METROPOLITAN AREA—Consists of Bibb and Houston Counties, Ga.
- MADISON STANDARD METROPOLITAN AREA—Coextensive with Dane County, Wis.
- MANCHESTER STANDARD METROPOLITAN AREA—Consists of Manchester City and Goffstown Town in Hillsborough County, N. H.
- MEMPHIS STANDARD METROPOLITAN AREA—Coextensive with Shelby County, Tenn.
- MIAMI STANDARD METROPOLITAN AREA—Coextensive with Dade County, Fla.
- MILWAUKEE STANDARD METROPOLITAN AREA—Coextensive with Milwaukee County, Wis.
- MINNEAPOLIS-ST. PAUL STANDARD METROPOLITAN AREA—Consists of Anoka, Dakota, Hennepin, and Ramsey Counties, Minn.
- MOBILE STANDARD METROPOLITAN AREA—Coextensive with Mobile County, Ala.
- MONTGOMERY STANDARD METROPOLITAN AREA—Coextensive with Montgomery County, Ala.
- MUNCIE STANDARD METROPOLITAN AREA—Coextensive with Delaware County, Ind.
- NASHVILLE STANDARD METROPOLITAN AREA—Coextensive with Davidson County, Tenn.
- NEW BEDFORD STANDARD METROPOLITAN AREA—Consists of New Bedford City and Acushnet, Dartmouth, and Fairhaven Towns in Bristol County, Mass.
- NEW BRITAIN-BRISTOL STANDARD METROPOLITAN AREA—Consists of Bristol and New Britain Cities and Berlin, Plainville, and Southington Towns in Hartford County; and Plymouth Town in Litchfield County, Conn.
- NEW HAVEN STANDARD METROPOLITAN AREA—Consists of New Haven City and Branford, East Haven, Hamden, North Haven, Orange, West Haven and Woodbridge Towns in New Haven County, Conn.
- NEW ORLEANS STANDARD METROPOLITAN AREA—Consists of Jefferson, Orleans, and St. Bernard Parishes, La.
- NEW YORK-NORTHEASTERN NEW JERSEY STANDARD METROPOLITAN AREA—Consists of New York City (Bronx, Kings, New York, Queens, and Richmond Counties) and Nassau, Rockland, Suffolk, and Westchester Counties, N. Y.; and Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union Counties, N. J.
- NORFOLK-PORTSMOUTH STANDARD METROPOLITAN AREA—Consists of Norfolk and Princess Anne Counties, and the cities of Norfolk, South Norfolk, Portsmouth, and Virginia Beach, Va.
- ODGEN STANDARD METROPOLITAN AREA—Coextensive with Weber County, Utah
- OKLAHOMA CITY STANDARD METROPOLITAN AREA—Coextensive with Oklahoma County, Okla.
- OMAHA STANDARD METROPOLITAN AREA—Consists of Douglas and Sarpy Counties, Nebr.; and Pottawattamie County, Iowa
- ORLANDO STANDARD METROPOLITAN AREA—Coextensive with Orange County, Fla.
- PEORIA STANDARD METROPOLITAN AREA—Consists of Peoria and Tazewell Counties, Ill.
- PHILADELPHIA STANDARD METROPOLITAN AREA—Consists of Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, Pa.; and Burlington, Camden, and Gloucester Counties, N. J.
- PHOENIX STANDARD METROPOLITAN AREA—Coextensive with Maricopa County, Ariz.
- PITTSBURGH STANDARD METROPOLITAN AREA—Consists of Allegheny, Beaver, Washington, and Westmoreland Counties, Pa.
- PITTSFIELD STANDARD METROPOLITAN AREA—Consists of Pittsfield City and Dalton, Lenox, and Lee Towns in Berkshire County, Mass.
- PORTLAND (MAINE) STANDARD METROPOLITAN AREA—Consists of Portland, South Portland, and Westbrook Cities and Cape Elizabeth and Falmouth Towns in Cumberland County, Me.
- PORTLAND (OREG.) STANDARD METROPOLITAN AREA—Consists of Clackamas, Multnomah, and Washington Counties, Oreg.; and Clark County, Wash.
- PROVIDENCE STANDARD METROPOLITAN AREA—Consists of Central Falls, Cranston, Pawtucket, Providence, and Woonsocket Cities and Cumberland, East Providence, Johnston, Lincoln, North Providence, North Smithfield, and Smithfield Towns in Providence County; North Kingstown Town in Washington County; Warwick City and East Greenwich, and West Warwick Towns in Kent County; and all of Bristol County, R. I. Also Attleboro City and North Attleborough, and Seekonk Towns in Bristol County; Bellingham, Franklin, Plainville,
- and Wrentham Towns in Norfolk County; and Blackstone and Millville Towns in Worcester County, Mass.
- PUEBLO STANDARD METROPOLITAN AREA—Coextensive with Pueblo County, Colo.
- RACINE STANDARD METROPOLITAN AREA—Coextensive with Racine County, Wis.
- RALEIGH STANDARD METROPOLITAN AREA—Coextensive with Wake County, N. C.
- READING STANDARD METROPOLITAN AREA—Coextensive with Berks County, Pa.
- RICHMOND STANDARD METROPOLITAN AREA—Consists of Richmond City and Chesterfield, and Henrico Counties, Va.
- ROANOKE STANDARD METROPOLITAN AREA—Consists of Roanoke City and Roanoke County, Va.
- ROCHESTER STANDARD METROPOLITAN AREA—Coextensive with Monroe County, N. Y.
- ROCKFORD STANDARD METROPOLITAN AREA—Coextensive with Winnebago County, Ill.
- SACRAMENTO STANDARD METROPOLITAN AREA—Coextensive with Sacramento County, Calif.
- SAGINAW STANDARD METROPOLITAN AREA—Coextensive with Saginaw County, Mich.
- ST. JOSEPH STANDARD METROPOLITAN AREA—Coextensive with Buchanan County, Mo.
- ST. LOUIS STANDARD METROPOLITAN AREA—Consists of St. Louis City and St. Charles and St. Louis Counties, Mo.; and Madison and St. Clair Counties, Ill.
- SALT LAKE CITY STANDARD METROPOLITAN AREA—Coextensive with Salt Lake County, Utah
- SAN ANGELO STANDARD METROPOLITAN AREA—Coextensive with Tom Green County, Tex.
- SAN ANTONIO STANDARD METROPOLITAN AREA—Coextensive with Bexar County, Tex.
- SAN BERNARDINO-RIVERSIDE-ONTARIO STANDARD METROPOLITAN AREA—Consists of San Bernardino and Riverside Counties, Calif.
- SAN DIEGO STANDARD METROPOLITAN AREA—Coextensive with San Diego County, Calif.
- SAN FRANCISCO-OAKLAND STANDARD METROPOLITAN AREA—Consists of Alameda, Contra Costa, Marin, San Francisco, San Mateo, and Solano Counties, Calif.
- SAN JOSE STANDARD METROPOLITAN AREA—Coextensive with Santa Clara County, Calif.
- SAVANNAH STANDARD METROPOLITAN AREA—Coextensive with Chatham County, Ga.
- SCRANTON STANDARD METROPOLITAN AREA—Coextensive with Lackawanna County, Pa.
- SEATTLE STANDARD METROPOLITAN AREA—Coextensive with King County, Wash.
- SHREVEPORT STANDARD METROPOLITAN AREA—Consists of Caddo and Bossier Parishes, La.
- SIoux CITY STANDARD METROPOLITAN AREA—Coextensive with Woodbury County, Iowa
- SIoux FALLS STANDARD METROPOLITAN AREA—Coextensive with Minnehaha County, S. Dak.
- SOUTH BEND STANDARD METROPOLITAN AREA—Coextensive with St. Joseph County, Ind.
- SPOKANE STANDARD METROPOLITAN AREA—Coextensive with Spokane County, Wash.
- SPRINGFIELD (ILL.) STANDARD METROPOLITAN AREA—Coextensive with Sangamon County, Ill.
- SPRINGFIELD (MO.) STANDARD METROPOLITAN AREA—Coextensive with Greene County, Mo.
- SPRINGFIELD (OHIO) STANDARD METROPOLITAN AREA—Coextensive with Clark County, Ohio
- SPRINGFIELD-HOLYOKE STANDARD METROPOLITAN AREA—Consists of Chicopee, Holyoke, Springfield, and Westfield Cities and Agawam, East Longmeadow, Longmeadow, Ludlow, West Springfield, and Wilbraham Towns in Hampden County; Northampton City and Easthampton, and South Hadley Towns in Hampshire County, Mass. Also Enfield Town in Hartford County, Conn.
- STAMFORD-NORWALK STANDARD METROPOLITAN AREA—Consists of Norwalk and Stamford Cities and Darien, Greenwich, New Canaan, and Westport Towns in Fairfield County, Conn.
- STOCKTON STANDARD METROPOLITAN AREA—Coextensive with San Joaquin County, Calif.
- SYRACUSE STANDARD METROPOLITAN AREA—Coextensive with Onondaga County, N. Y.
- TACOMA STANDARD METROPOLITAN AREA—Coextensive with Pierce County, Wash.
- TAMPA-ST. PETERSBURG STANDARD METROPOLITAN AREA—Consists of Hillsborough and Pinellas Counties, Fla.
- TERRE HAUTE STANDARD METROPOLITAN AREA—Coextensive with Vigo County, Ind.
- TOLEDO STANDARD METROPOLITAN AREA—Coextensive with Lucas County, Ohio
- TOPEKA STANDARD METROPOLITAN AREA—Coextensive with Shawnee County, Kans.
- TRENTON STANDARD METROPOLITAN AREA—Coextensive with Mercer County, N. J.
- TUCSON STANDARD METROPOLITAN AREA—Coextensive with Pima County, Ariz.
- TULSA STANDARD METROPOLITAN AREA—Coextensive with Tulsa County, Okla.
- UTICA-ROME STANDARD METROPOLITAN AREA—Consists of Herkimer and Oneida Counties, N. Y.

## STANDARD METROPOLITAN AREAS

WACO STANDARD METROPOLITAN AREA—Coextensive with McLennan County, Tex.

WASHINGTON STANDARD METROPOLITAN AREA—Consists of the District of Columbia; Alexandria and Falls Church Cities and Arlington and Fairfax Counties, Va.; Montgomery and Prince Georges Counties, Md.

WATERBURY STANDARD METROPOLITAN AREA—Consists of Waterbury City, Naugatuck Borough, and Beacon Falls, Cheshire, Middlebury, Prospect, and Wolcott Towns in New Haven County; and Thomastown and Watertown Towns in Litchfield County, Conn.

WATERLOO STANDARD METROPOLITAN AREA—Coextensive with Blackhawk County, Iowa

WHEELING-STEUBENVILLE STANDARD METROPOLITAN AREA—Consists of Brooke, Hancock, Marshall, and Ohio Counties, W. Va.; and Belmont and Jefferson Counties, Ohio

WICHITA STANDARD METROPOLITAN AREA—Coextensive with Sedgwick County, Kans.

WICHITA FALLS STANDARD METROPOLITAN AREA—Coextensive with Wichita County, Tex.

WILKES-BARRE-HAZLETON STANDARD METROPOLITAN AREA—Coextensive with Luzerne County, Pa.

WILMINGTON STANDARD METROPOLITAN AREA—Consists of New Castle County, Del.; and Salem County, N. J.

WINSTON-SALEM STANDARD METROPOLITAN AREA—Coextensive with Forsyth County, N. C.

WORCESTER STANDARD METROPOLITAN AREA—Consists of Worcester City and Auburn, East Brookfield, Grafton, Holden, Leicester, Millbury, Northborough, North Brookfield, Shrewsbury, Spencer, Westborough, and West Boylston Towns in Worcester County, Mass.

YORK STANDARD METROPOLITAN AREA—Coextensive with York County, Pa.

YOUNGSTOWN STANDARD METROPOLITAN AREA—Consists of Mahoning and Trumbull Counties, Ohio, and Mercer County, Pa.

## GENERAL SUMMARY

45

Table 4-B.—GENERAL STATISTICS FOR ALL OPERATING MANUFACTURING ESTABLISHMENTS BY DIVISIONS, STATES, AND STANDARD METROPOLITAN AREAS:  
1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Division, State, Standard Metropolitan Area, and Year	Establish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Capital expenditures, new (\$1,000)	
		Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

## GENERAL SUMMARY

Table -B.-GENERAL STATISTICS FOR ALL OPERATING MANUFACTURING ESTABLISHMENTS BY DIVISIONS, STATES, AND STANDARD METROPOLITAN AREAS:  
1954 AND EARLIER YEARS—Continued

For explanation of column captions, see I-1, footnote 1

Division, State, Standard Metropolitan Area, and Year	Establish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Capital expenditures, new (\$1,000)	
		Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

## GENERAL SUMMARY

51

Table B.—GENERAL STATISTICS FOR ALL OPERATING MANUFACTURING ESTABLISHMENTS BY DIVISIONS, STATES, AND STANDARD METROPOLITAN AREAS:  
1954 AND EARLIER YEARS—Continued

(For explanation of column captions see Introduction)

Division, State, Standard Metropolitan Area, and Year	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Capital expenditures, new (\$1,000)
		Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

1919.....	764	(NA)	(NA)	63,830		114,650	208,200	

Note: Detailed figures may not equal totals because of independent rounding.

NA Not available.

<sup>1</sup> Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of consistency review. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volume for this period.

<sup>2</sup> The 1954 figures include data for establishments engaged in the processing of fluid milk, Industry Group 202, Dairy Products. These establishments were not included in the figures for the Annual Survey years 1949-1953 or earlier Census years. In addition, the 1954 Census and Annual Survey years include data for Logging Camps and Contractors, Industry 2411, which were not included within the scope of the 1947 Census and earlier years. There were also a number of changes in the definition of manufacturing industries during earlier Census years that affect the comparability of the historical series. Among the more important of these were: figures for 1935 and later years exclude data for "Railroad repair shops" and "Manufactured gas" which were included in 1899-1933 figures; the minimum size of establishment included for 1934 and 1947 was one employee, for 1939-1921 manufacturing establishments reporting value of shipments of \$5,000 or more were within scope whereas for 1919 and earlier years the cutoff was \$500. (This change in procedure has not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

<sup>3</sup> The employment and payroll figures for operating manufacturing establishments for 1949-1953 are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard error associated with these estimates are published in the Annual Survey of Manufactures volume for this period.

<sup>4</sup> This report includes only standard metropolitan areas with 40,000 or more manufacturing employees in 1954 or 1947. For definitions of the areas see footnotes to Table 4A.

<sup>5</sup> Data for the Fall River and New Bedford Standard Metropolitan Areas were combined in 1947 and 1939. The combined data for the two years are given below.

Year	Number of establishments	All employees		Production workers			Value added by manufacture (\$1,000)	Capital expenditures, new (\$1,000)
		Number	Payroll	Number	Man-hours	Wages		
			(\$1,000)		(1,000)	(\$1,000)		
1947.....	588	62,572	142,422	57,379		122,624	244,346	12,541
1939.....	451	54,791	52,365	48,127	(NA)	39,790	72,661	(NA)

## GENERAL SUMMARY

Table 5.—GENERAL STATISTICS FOR OPERATING MANUFACTURING ESTABLISHMENTS BY SELECTED COUNTIES: 1954 AND 1947

(For explanation of column captions see Introduction. This table presents, by States, statistics for all counties with 2,500 or more employees in manufacturing establishments in 1954. Statistics for at least five counties are, however, shown for each State. For States having fewer than five counties with 2,500 or more manufacturing employees, the next largest counties were added until a total of five was reached)

State and county	Popula- tion, 1950	Estab- lish- ments, number	1954							1947 <sup>1</sup>	
			All employees		Production workers			Value added by manu- facture (\$1,000)	Capital expendi- tures, new (\$1,000)	All employees, number	Value added by manu- facture (\$1,000)

D Withheld to avoid disclosing figures for individual companies. NA Not available.

The 1947 data are not strictly comparable with the figures shown for 1954 due to differences in coverage of loggers and fluid milk distributors. See discussion in Introduction.

San Francisco city is coextensive with San Francisco county.

The independent cities of Baltimore, Md., and St. Louis, Mo., are treated as counties.

A borough of New York City.

	Mountain.....	287	5,049	(D)	4,009	(D)	(D)	(D)	(D)	(D)	(D)
	Pacific.....	1,754	51,009	(D)	38,595	(D)	(D)	(D)	(D)	(D)	(D)

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

NA Not available.

<sup>1</sup>For definitions of the divisions, see table 4A.<sup>2</sup>The 1954 and 1947 "All industries" totals are not strictly comparable because of differences in coverage between the two years in major groups 20 and 24. (See footnote 4.)<sup>3</sup>The differences in coverage of establishments in the logging and fluid milk industries significantly affected the comparability of the "All industries" total, for four of the nine geographic divisions. Consequently 1947 "All manufacturing" totals are not shown in the table for these divisions. In the following table, comparable employment and value added by manufactures figures (excluding the establishments in the milk and logging industries) are shown for these divisions:

Division	1954		1947	
	All employees, number	Value added by manufacture (\$1,000)	All employees, number	Value added by manufacture (\$1,000)
West South Central.....	688,183	5,549,166	546,083	3,008,043
Mountain.....	174,472	1,408,032	136,852	762,599
Pacific.....	1,298,588	10,723,201	906,862	5,496,961

<sup>4</sup>The 1954 Census coverage of establishments in Major Industry Group 20, Food and Kindred Products, and Major Industry Group 24, Lumber and Wood Products, are not comparable with the corresponding group figures published in 1947. In 1947, the Standard Industrial Classification of sub-group 202, Dairy Products differed from that used in 1954 chiefly in that the Industries 2026, Fluid Milk, and 2027, Fluid Milk and Other Products, were not included within the scope of manufacturing. Also, Logging Camps and Contractors, Industry 2411, were not included in the 1947 Census of Manufactures. They were, however, included in the 1954 Census (see Introduction for complete explanation). Comparable employment and value added by manufacture figures for the United States by Divisions for 1954 and 1947 for the Food and Kindred Products Industries (excluding Fluid Milk, Industry 2066, and Fluid Milk and Other Products, Industry 2027) and for the Wood Products group (excluding Logging Camps and Contractors, Industry 2411, are shown below:

Code	Area	1954		1947	
		All employees, number	Value added by manufacture (\$1,000)	All employees, number	Value added by manufacture (\$1,000)

<sup>5</sup>Includes privately owned and/or operated establishments classified in Major Industry Group 19, Ordnance and Accessories. (Establishments which are Government-owned and operated are not included.)

## Major Group 20.—Food and Kindred Products

This major group includes establishments manufacturing foods and beverages for human consumption and certain related products, such as manufactured ice, chewing gum, and prepared feeds for animals and fowls. Establishments which are primarily engaged in processing and distributing fluid milk and cream are also included. Establishments primarily engaged in

extracting animal and vegetable oils are classified in Major Group 28, Chemicals and Products, and establishments producing meat, poultry, dairy, bakery, and confectionery products for sale chiefly at retail on the manufacturing premises are classified in Trade Industries.

Table 1.—GENERAL STATISTICS FOR THE INDUSTRY GROUP: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Year <sup>1</sup>	Establish- ments, number	All employees <sup>2</sup>		Production workers <sup>2</sup>			Value added by manufacture <sup>3</sup>	Capital expendi- tures, new	Horsepower of prime movers and electric motors <sup>4</sup>

1921.....	51,502	759,931	1,016,293	620,750		742,352	2,119,577		

NA Not available.

<sup>1</sup>In addition to data for operating establishments, manufacturers' central administrative offices and auxiliary units reported 65,805 employees with a payroll of \$374,629 thousand in 1954. Similar data are shown for the years 1949-1953 in the Annual Survey of Manufactures volumes. Data for these units are not available for the years prior to 1949.

<sup>2</sup>The figures for 1939 through 1954 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known. "Production workers" includes driver salesmen in the bakery products industry (S.I.C. 2051) for 1939 and prior years, but not for 1947-1954. The number of driver salesmen for 1939 was at least 120,000.

<sup>3</sup>Value of products less cost of materials, supplies, fuel, electricity, and contract work. For 1921-1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

<sup>4</sup>Driven by purchased energy.

<sup>5</sup>The figures for 1954 include data for milk bottling plants (SIC 2026 and 2027) which were not covered in prior years. Value added for these two industries (SIC 2026 and 2027) was \$1,475,638 thousand in 1954.

<sup>6</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

## MANUFACTURES--INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS FOR INDUSTRY GROUPS BY REGIONS AND STATES: 1954 AND 1947

NOTE: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The 1954 Census coverage of establishments in Major Industry Group 20, "Food and Kindred Products," is not comparable with the corresponding group total published for 1947. In 1947, the Standard Industrial Classification of Sub-group 202, "Dairy Products," differed from that used in 1954 chiefly in that the Industries 2026, Fluid Milk, and 2027, Fluid Milk and Other Products, were not included within the scope of manufacturing. The inclusion of these industries in 1947 would have raised the 1947 employment figure of 1,461,364 for the Food group shown in Table 2A by an estimated 10 to 15 percent and the employment figure of 112,264 for the Dairy Products Sub-group shown in Table 2B by an estimated 150 to 200 percent. No estimate has been made for value added by manufacture or for individual States. The total employment and value added by manufacture figures for 1954 and 1947 excluding Industry 2026, Fluid Milk, and Industry 2027, Fluid Milk and Other Products, for Group 20, Food and Kindred Products are shown in Table 2A and Sub-group 202, Dairy Products are shown in Table 2B.

<sup>2</sup>Each producing State not shown separately has been withheld either (a) to avoid disclosing figures for individual companies; or (b) because the State had less than 100 employees in the industry group. Such State figures are included, however, in the appropriate regional and United States totals.

<sup>3</sup>In 1947 separate manufacturers reports were submitted covering the manufacture of prepared meats at manufacturers' wholesale branches. These operations were classified as manufacturing and included in the statistics for Industry 2013. In 1954 manufacturers' wholesale branches submitted a single report covering the entire establishment and were classified in the Wholesale Trade Industries. The manufacturing activities at these establishments had 4,904 production workers in 1954 and accounted for \$47,669 thousand of value added by manufacture.

<sup>4</sup>Less than \$500 thousand.

<sup>5</sup>This subgroup includes Industry 2036, Packaged seafood. In 1947 these establishments were classified in Wholesale Trade (SIC 5046) and are not included in the 1947 statistics.

<sup>6</sup>Data for 1947 include retail multi-unit enterprises with baking on the premises at each location. Such establishments were classified in Retail Trade (SIC 5462) for 1954.

## FOOD AND KINDRED PRODUCTS

NOTE: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup>In 1954 establishments shipping fluid milk and other dairy products were classified based on the primary value of products shipped. This differed from the 1947 classifications which, in accordance with the Standard Industrial Classification Manual, excluded from manufacturing establishments shipping any fluid milk. The data for 1947 shown in this table have been revised to include employment and value added by manufacture for these establishments that shipped some fluid milk in 1947, but were primarily shipping other dairy products. These revisions have also been made to the chapters for the Dairy Products Industries, but not to the State chapters.

Note: Detailed figures may not add to totals because of independent rounding.

<sup>1</sup>Establishments classified in industries 2011, Meat packing plants, and 2013, Prepared meats, were not requested to report separate data for finished products inventory and work-in-process inventory. The total for these inventories has been included with finished products.

## Meat Products

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

<u>Code</u>	<u>Title</u>
2011—Meat Packing Plants	
2013—Prepared Meats	
2015—Poultry Dressing Plants	

### Meat Packing Plants (2011) and Prepared Meats (2013)

These two industries are similar in many respects and for some purposes should be viewed as one industry. Prepared meats (smoked meats, sausage, canned meats, etc.) are produced by each industry; the distinguishing characteristic of Industry 2011 is the slaughtering of livestock, and of Industry 2013 the use of purchased meat material. Nearly all of the fresh meat used as a raw material by plants in Industry 2013 is supplied by plants in Industry 2011; in addition, a considerable volume of fresh meat material is sold or transferred between plants in Industry 2011 for use in further processing.

Because of these interplant sales and transfers, aggregates of the value of shipments and cost of materials for Industry 2011 separately, or for Industries 2011 and 2013 combined, include a substantial amount of duplication.

The 1954 Census of Manufactures included plants accounting for about 90 per cent of the total volume of commercial livestock slaughter, or 38,400 million pounds live weight out of a total of 42,700 million as reported by the U. S. Department of Agriculture. The difference is accounted for principally by establishments in which the major activity is wholesale or retail trade rather than manufacturing. Such establishments were included in the Census of Business for 1954, and no data were secured on the slaughtering activities conducted as a minor activity in them. Certain other types of slaughtering establishments were also excluded from Census of Manufactures coverage, such as those with no paid employees. A sample check of Census records against Department of Agriculture records for four States (Montana, West Virginia, Nebraska, and New York) indicated that most of the establishments not included in the Census of Manufactures were meat wholesalers or jobbers, but grocery stores, retail meat markets, and poultry distributors were also among the residual group.

The chart which appears at the end of the text illustrates the difference in coverage between the Census of Manufactures and the "total commercial slaughter" figures compiled by the U. S. Department of Agriculture. The right-hand section of the chart also indicates the disposition of meats and other products originating in slaughtering plants, and the inter-relationship of Industries 2011 and 2013. This chart is intended to illustrate Census of Manufactures coverage of livestock slaughter and the movement of products in broad outline; some interchange of meats which actually takes place is relatively unimportant and is not shown in the chart, such as the sale of meats by non-manufacturing establishments (included in the Census of Business) to manufacturing establishments included in the Census of Manufactures. The duplication shown graphically in the chart was measured statistically in the 1954 Census by the collection of data from each plant on the volume of purchases of individual products. These data are presented in Table 6A of this report, in which shipments of products are shown both on a "gross" basis (including duplication arising within the industries) and a "net"

basis, obtained by subtracting total purchases of each product from the gross shipments of the product.

Companies accounting for a large proportion of the output of meats and meat products (except poultry) reported shipments, production, inventories, and expenditures for plant and equipment, for the fiscal year ending November 1, 1954, rather than for the calendar year. However, comparison of total commercial slaughter figures for the two periods, as published by the Department of Agriculture, indicates that the number of animals slaughtered during the fiscal year was practically identical with calendar year production, except for a 2 percent difference in hog slaughter. The Census statistics may thus be taken as representative of the calendar year.

Industries 2011 and 2013 accounted in 1954 for over 99 per cent of the meat and meat products produced in all manufacturing industries; this coverage ratio was also 99 per cent in 1947.

2011—Meat Packing Plants (Full Standard Industrial Classification Title: Meat Packing, Wholesale)

Industry 2011, Meat Packing Plants, comprises establishments primarily engaged in the slaughtering (for their own account, or on a contract basis for the trade) of cattle, hogs, sheep, lambs, calves, and other animals, except small game, for meat to be sold fresh or to be used on the same premises in canning and curing, and in making sausage, lard, and other products. Important products of this industry include fresh and frozen meat (beef, veal, mutton, lamb, and pork), canned beef, pork and other meat goods, sausage and lard. Establishments primarily engaged in manufacturing sausages and meat specialties are classified in Industry 2011 if the raw materials are primarily obtained from animals slaughtered in the establishment; in Industry 2013, Prepared Meats, if the raw materials are primarily purchased meats. Establishments primarily engaged in killing, dressing and packing poultry, rabbits and other small game are included in Industry 2015, Poultry Dressing; canned poultry in Industry 2033, Canning and Preserving, and dog and cat food in Industry 2042, Prepared Animal Feeds. For a detailed list of the primary products of Industry 2011, refer to Table 6A, product codes 2011111 to 2011798 and, in establishments where animals are slaughtered, codes 2013111 to 2013431.

The value of shipments of Industry 2011 in 1954 totaled \$9,906 million. This included shipments of fresh and prepared meats (primary products) valued at \$9,642 million, shipments of other products (secondary products) valued at \$252 million, and miscellaneous receipts of \$12 million.

Industry 2011 shipments of primary products (fresh and prepared meats), in 1954 represented 98 percent of its total product shipments (primary and secondary). This primary product specialization ratio is available for 1947 only for Industries 2011 and 2013 combined; on this basis, the 1947 ratio was 96 percent. Secondary products shipped by this industry in 1954 consisted mainly of grease, tallow, feed, and fertilizer by-products, \$142 million; and dog and cat food, \$56 million. Although the primary product specialization ratio for the industry is quite high, meat packing plants do not tend to specialize in any one species of livestock, but usually produce a variety of fresh and prepared meats. Plants in the industry fall into three main categories by type of operation: (1) plants engaged solely in slaughtering animals and producing fresh meats; (2) plants slaughtering animals and producing cured or processed meats in addition to the sale of fresh

meats; or (3) custom slaughterers, slaughtering animals on a contract basis for the trade.

**2013—Prepared Meats** (Includes Standard Industrial Classification Industry 2013, Sausages and Other Prepared Meat Products and Industry 2014, Sausage Casings)

Industry 2013, Prepared Meats, comprises establishments primarily engaged in manufacturing sausages, prepared meats, and meat specialties, and which are not primarily engaged in slaughtering livestock. Sausage or meat kitchens operated by packing houses as separate establishments are also included in this industry and establishments primarily engaged in the manufacture of sausage casings. Establishments primarily engaged in killing, dressing, and packing poultry, rabbits and other small game are classified in Industry 2015, Poultry Dressing; and canning poultry in Industry 2033, Canning and Preserving, Except Fish. For a detailed list of products of Industry 2013 refer to Table 6A, product codes 2013111 to 2013431 and 2014011 to 2014071. Products with the first 4 digits 2013 are considered primary to both Industries 2013, Prepared Meats, and 2011, Meat Packing Plants.

The value of shipments of Industry 2013 in 1954 totaled \$1,415 million. This included shipments of primary products (prepared meats and sausage casings), valued at \$1,176 million, shipments of secondary products valued at \$235 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$3 million.

Industry 2013 shipments of prepared meats and sausage casings (primary products) in 1954 represented 83 percent of its total product shipments (primary and secondary). This specialization ratio was not computed for Industry 2013 separately for 1947; for Industries 2011 and 2013 combined, it was 98 percent for 1954 and 96 percent for 1947. Secondary products shipped by Industry 2013 in 1954 consisted mainly of fresh meats, \$205 million, and other meat packing plant products, \$24 million.

A considerable volume of prepared meats are produced in manufacturers' wholesale branches that are primarily engaged in the wholesale distribution of meat, and therefore classified as wholesale establishments in the 1954 Censuses. Production of prepared meats in wholesale branches is shown separately in Table 6A. The wages paid and the number of production workers engaged in the production of prepared meats in these establishments is included in Table 2A of this report.

The prepared meats departments of wholesale branches were included in the 1947 Census of Manufactures as manufacturing establishments. To provide a basis of comparison with 1947 and previous years, statistics for 1954 are shown in Table 1 which include and exclude the manufacturing activities in these establishments. The former are comparable to the 1947 statistics and the latter are in conformity with the present definition of Industry 2013.

Prepared meats manufactured in retail and independent wholesale establishments are not included in the Census of Manufactures statistics. The volume of prepared meats manufactured in such establishments was not measured in the 1954 Census.

**2015—Poultry Dressing Plants** (Full Standard Industrial Classification Title: Poultry and Small Game Dressing and Packing, Wholesale)

This industry comprises establishments primarily engaged in killing, dressing, and packing poultry, rabbits, and other small game for their own account or on a contract basis. This industry also includes separate plants cutting-up and quick-freezing poultry or small game for the trade or for other plants of the company.

The Standard Industrial Classification Manual, dated November 1945, has been revised to transfer from this industry plants primarily engaged in canning chicken soup, poultry and poultry mixtures. These plants are now included in Industry 2033, Canning and Preserving, Except Fish. The 1947 data for these plants are consistent with the revised Standard Industrial Classification. For a detailed list of the primary products of this industry, refer to Table 6A, product codes 2015111 to 2015498.

The value of shipments of Industry 2015 in 1954 totaled \$1,258 million. This included shipments of primary products (dressed poultry and small game), valued at \$1,125 million, shipments of secondary products valued at \$52 million, and miscellaneous receipts, mainly shell egg sales of \$81 million.

Industry 2015 shipments of dressed poultry and small game (primary products) in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this specialization ratio was 88 percent. Secondary products shipped by this industry in 1954 consisted mainly of creamery butter (\$12 million), and dried, frozen, and liquid eggs, (\$18 million).

Industry 2015 shipments of dressed poultry and small game, in 1954 represented 97 percent of these products valued at \$1,166 million shipped by all manufacturing industries. The 1947 coverage ratio was 88 percent. Other industries shipping dressed poultry and small game included Industry 2021, Creamery Butter, and Industry 2099, Miscellaneous Food Preparations, N. E. C.

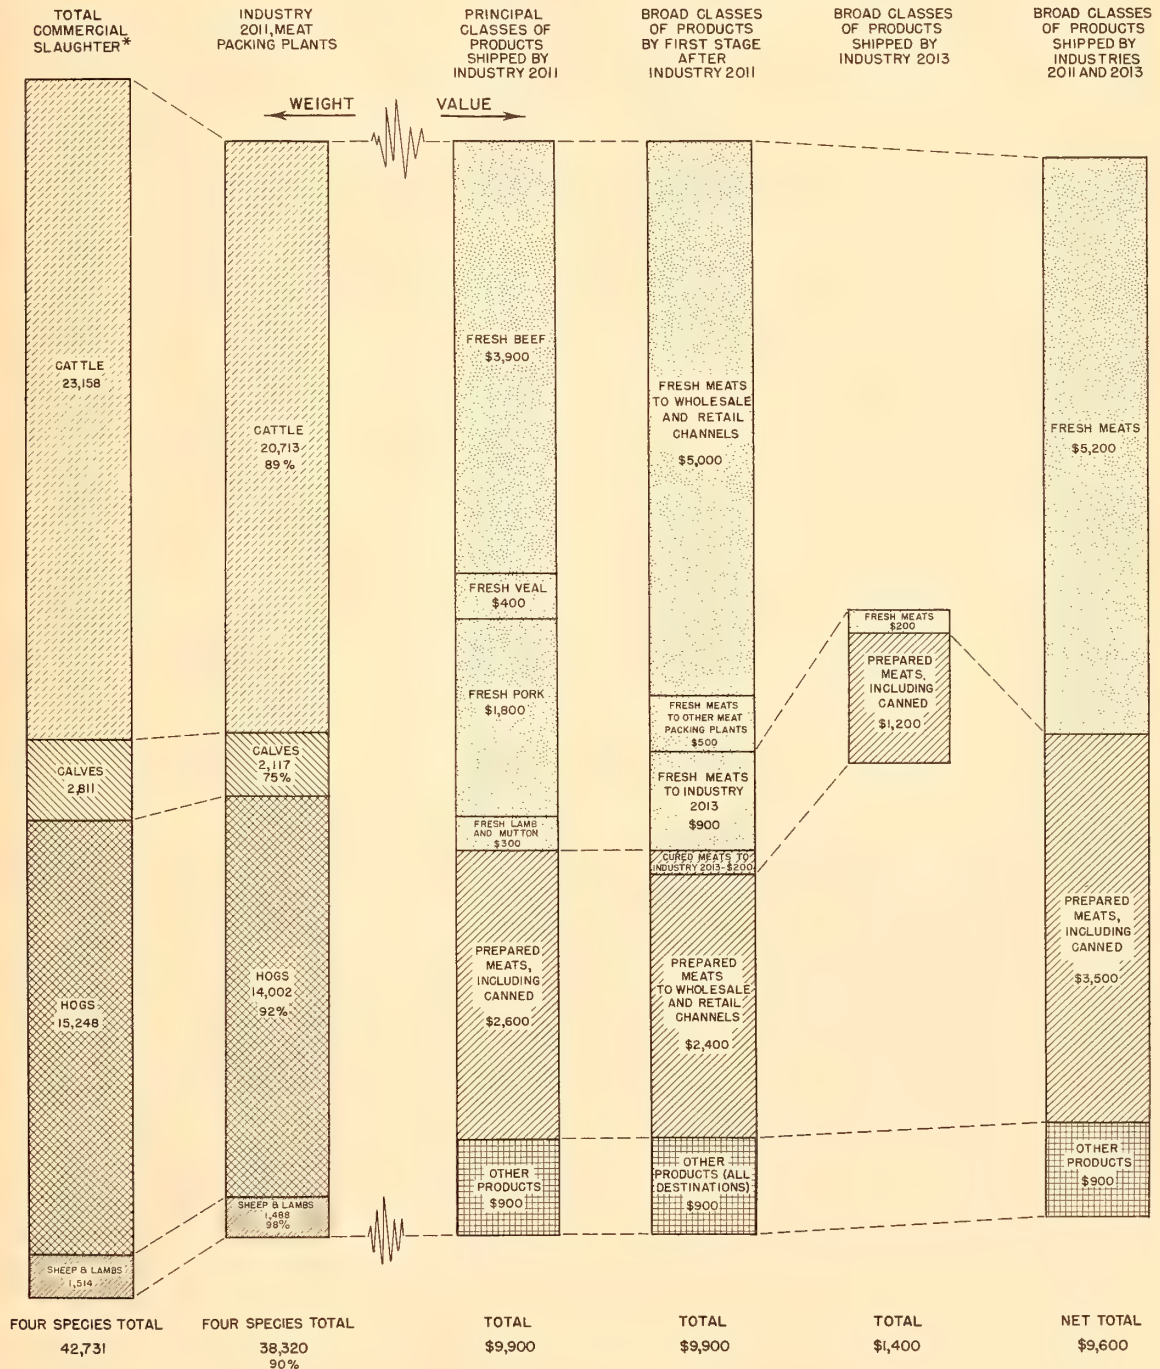

Statistics for poultry and small game killed and dressed at farms, hatcheries, frozen food lockers and wholesale and retail establishments are not included in this report. Comparison with estimates of the United States Department of Agriculture indicates that plants included in the Census of Manufactures accounted for 71 percent of the total commercial broiler production in 1954, including production on farms.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

# COVERAGE OF LIVESTOCK SLAUGHTER, 1954 CENSUS OF MANUFACTURES, AND MOVEMENT OF PRODUCTS SHIPPED BY MEAT PACKING PLANTS (INDUSTRY 2011)

LIVE WEIGHT OF ANIMALS SLAUGHTERED  
(MILLION POUNDS)

VALUE OF PRODUCTS SHIPPED  
(MILLION DOLLARS)

NA Not available.

<sup>1</sup>The number of "All employees" and the number of "Production and related workers" for the period 1949-1954 are based on employment for the payroll periods ended nearest the 15th of March, May, August, and November. However, in the case of the "Poultry dressing plants" industry a different method was used for 1954: All employees represents the average of 12 monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August, and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For Industries 2011 and 2013, the figures represent value of gross shipments (see text for these industries). For Industry 2015, the figures for 1929 and 1951-1954 represent value of shipments and for other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>Industry 2011, Meat Packing Plants, includes Industry 2012, Custom Slaughtering, Wholesale.

<sup>6</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of the 15 percent generally have been omitted from this table.

<sup>7</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$423.2 million for Industry 2011, Meat Packing Plants, and \$23.6 million for Industry 2015, Poultry Dressing Plants. No comparable figures are available for "Prepared Meats" prior to 1939.

<sup>8</sup>Industry 2013, Prepared Meats, include Industry 2014, Sausage Casings.

<sup>9</sup>For 1953 and prior years, separate manufacturers reports were submitted covering the manufacture of prepared meats at manufacturers' wholesale branches, which were classified as manufacturing establishments in Industry 2013, Prepared Meats. For 1954, these establishments submitted a single report covering the entire establishment and were classified in the Wholesale Trade industries, but number of production workers engaged in the manufacture of prepared meats, cost of materials consumed in the manufacture of prepared meats, and shipments of prepared meats manufactured on the premises were reported separately.

<sup>10</sup>Industry 2015, "Poultry dressing plants", was not canvassed in 1927. The figures for 1925 and earlier years are not sufficiently comparable with those for later years to be shown in this table.

## MEAT PRODUCTS

Note: Detailed figures may not add to the totals due to independent rounding.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of data for individual companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2011, Meat Packing Plants: New England—New Hampshire, 4 (20-99); Vermont, 8 (20-99); West North Central—North Dakota, 8 (500-999); South Dakota, 21 (4,016); South Atlantic—Delaware, 9 (20-99); District of Columbia, 3 (100-249).

S.I.C. 2013, Prepared Meats: New England—New Hampshire, 8 (100-249); Rhode Island, 12 (20-99); West North Central—North Dakota, 4 (20-99); South Dakota, 2 (1-19); South Atlantic—Delaware, 5 (100-249); District of Columbia, 5 (250-499); West Virginia, 3 (100-249); East South Central—Kentucky, 9 (100-249); Alabama, 7 (100-249); Mountain—Montana, 1 (1-19); Idaho, 1 (1-19); Wyoming, 2 (1-19); Arizona, 6 (20-99); Nevada, 3 (1-19).

S.I.C. 2015, Poultry Dressing Plants: New England—New Hampshire, 10 (100-249); Vermont, 2 (20-99); Rhode Island, 1 (1-19); West North Central—North Dakota, 4 (100-249); South Dakota, 2 (100-249); South Atlantic—District of Columbia, 1 (1-19); West Virginia, 13 (250-499); East South Central—Kentucky, 13 (100-249); Alabama, 20 (1,431); Mountain—Montana, 2 (1-19); Idaho, 4 (1-19); Wyoming, 4 (1-19); Arizona, 3 (1-19); Nevada, 1 (1-19).

Note: Detailed figures may not add to the totals due to independent rounding.

D Withheld to avoid disclosing figures for individual companies.

1-11 Data for 1954, other than number of establishments, have been grouped into class intervals to avoid disclosure of individual company figures still provide comparability with 1947 statistics. The class intervals indicated are as follows:

Number of Production Workers	Value added by manufacture, cost of materials, etc., and value of shipments (\$1,000)	
100-249	100-249	710,000-24,999
250-499	250-499	25,000-49,999
500-999	500-999	50,000-99,999
1,000-2,499	1,000-2,499	100,000-249,999
2,500-4,999	2,500-4,999	250,000-499,999
5,000-9,999	5,000-9,999

Expenditures for used plant and equipment.....do.....	1,616	2,180	1,919	838
Horsepower rating of power equipment at end of 1954:				
Horsepower of prime movers and electric motors driven by purchased energy, total, 1,000 hp..	897	130	80	66
Engines, etc., driving electric generators.....do.....	98	2	( <sup>3</sup> )	1
Engines, etc., not driving electric generators.....do.....	112	8	5	1
Electric motors driven by purchased energy.....do.....	687	120	75	64
Electric motors driven by energy generated at the establishment.....do.....	62	1	1	( <sup>3</sup> )

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 hp.

## MANUFACTURES--INDUSTRY STATISTICS

Table 4.--SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

Table 5A.--INDUSTRY-PRODUCT ANALYSIS--SUMMARY OF INDUSTRY AND PRIMARY PRODUCT SHIPMENTS, SPECIALIZATION RATIOS AND COVERAGE RATIOS, FOR THE UNITED STATES: 1954 AND 1947

Industry code	Industry and census year	Value of shipments					Value of primary products shipped			
		Total	Primary products	Secondary products	Misce- laneous receipts	Primary product special- ization ratio <sup>1</sup>  Col. B Col. B+C (Percent)	Total (made in all industries)	Made in this industry	Made in other industries	Coverage ratio <sup>2</sup>  Col. G Col. F (Percent)
(\$1,000)	(\$1,000)	(\$1,000)	(\$1,000)	(E)	(\$1,000)	(\$1,000)	(\$1,000)	(I)		
(A)	(B)	(C)	(D)		(F)	(G)	(H)			
2011	Meat packing plants.....1954..	9,905,687	9,641,738	251,996	11,953	398	11,073,073	9,641,738	1,431,335	387
2013	Prepared meats.....1954..	1,415,382	1,176,475	235,442	3,465	383	4,201,019	1,176,475	3,024,544	3,428
2015	Poultry dressing plants.....1954..	1,257,892	1,124,809	51,610	81,473	96	1,165,597	1,124,809	40,788	97
	1947..	478,993	371,136	49,588	58,269	88	420,447	371,136	49,311	88

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Ratios cannot be computed separately for Industries 2011 and 2013 for 1947, owing to lack of necessary data. On a combined basis (Industries 2011 and 2013 taken together) the primary product specialization ratios were as follows: 1954, 98%, 1947, 96%. The combined coverage ratios were: 1954, 99%, 1947, 99%.

<sup>4</sup>The coverage ratio for Industry 2013 is quite low owing to the fact that all of its primary products are also primary to Industry 2011.

MEAT PRODUCTS

20A-11

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between fresh meats, prepared meats, dressed poultry, other products and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. However, all of the product classes of Industry 2013 are also primary to Industry 2011, and product class 20115, Lard, is also primary to Industry 2013. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Meat packing plants (S.I.C. 2011)	Prepared meats (S.I.C. 2013)	Poultry dressing plants (S.I.C. 2015)	Other industries	All industries

## MANUFACTURES—INDUSTRY STATISTICS

Table 6A.—QUANTITY AND VALUE OF PRODUCTS SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, FOR THE UNITED STATES: 1954 AND 1947--Continued

Product code	Product	1954 total shipments including interplant transfers (outgoing), manufacturing industries only (including manufacturers' wholesale branches) (gross shipments)		1947 net shipments from manufacturers' wholesale branches	
		Quantity (1,000 pounds)	Value (\$1,000)	Quantity (1,000 pounds)	Value (\$1,000)
2015---	Poultry and small game (killed and dressed in manufacturing establishments, total) <sup>1</sup> .....	xxx	1,165,597	xxx	420,447
20151	Hens (or fowl) and other chickens.....	xxx	899,317	755,057	304,417
2015111	New York dressed (dressed weight).....	841,149	248,139	605,681	224,658
2015115	Eviscerated or drawn (eviscerated weight).....	1,764,710	651,178	149,376	79,759
20153	Turkeys.....	xxx	203,836	216,513	97,339
2015311	New York dressed (dressed weight).....	111,513	43,981	161,590	69,133
2015315	Eviscerated or drawn (eviscerated weight).....	356,024	159,855	54,923	28,206
20154	Other poultry and small game.....	xxx	25,727	xxx	6,907
2015411	Other poultry and small game killed in the establishments (ducks, geese, rabbits, etc.).....	58,287	21,916	(NA)	6,896
2015498	Poultry and small game, quick frozen but not killed in the establishment.....	9,219	3,811	xxx	1,825
2015000	Poultry not specified by kind.....	xxx	36,717	xxx	11,795

xxx Not applicable.

NA Not available.

<sup>1</sup>In the 1954 Censuses of Manufactures and Business, manufacturers' wholesale branches were classified in wholesale trade, and the production of prepared meats reported separately. In the 1947 Census of Manufactures, and Annual Surveys of Manufactures, separate reports were filed for these establishments covering only the manufacturing activities conducted on the premises and were classified in Industry 2013, Prepared meats.

<sup>2</sup>Substantial quantities of these products are produced at nonmanufacturing establishments and except for those products produced at manufacturers' wholesale branches, are not included in these statistics.

<sup>3</sup>Figures represent the output of establishments classified in Industries 2011, 2013 and 2886. Detailed production information was not obtained from establishments primarily engaged in wool pulling (Industry 3999). Total production for 1954 was 43,500,000 pounds (U.S.D.A. estimate).

<sup>4</sup>"Killing floor offal, inedible meat scraps, and bones (code 2011765)," included with other meat packing plant products, not specified by kind, (code 2011000).

<sup>5</sup>Substantial quantities of fowl and small game are killed and dressed for the commercial market on farms and at retail and wholesale establishments and are not included in these statistics.

<sup>6</sup>Includes small game byproducts (fats, feathers, etc.).

MEAT PRODUCTS

20A-17

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

				West.....	2,578
				California.....	2,215

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 20111, North Dakota and South Dakota; 20112, North Dakota and District of Columbia; 20113, Massachusetts, North Dakota, and South Dakota; 20114, Rhode Island, North Dakota, and Kansas; 20115, Connecticut, North Dakota, and South Dakota; 20116, North Dakota, and South Dakota; 20117, Massachusetts, Ohio, Michigan, Wisconsin, Missouri, South Dakota, and Montana; 20131, South Dakota, North Dakota, Missouri, Delaware, District of Columbia, and West Virginia; 20132, Vermont; 20133, New Hampshire, Connecticut, Massachusetts, Missouri, South Dakota, Mississippi, Oklahoma, and Colorado; 20134, Massachusetts and Kansas; 20140, Virginia; 20151, New Hampshire and Colorado; 20153, South Carolina, Georgia, and Utah; 20154, Connecticut; 20110, Wyoming.

<sup>2</sup>For 1953 and prior years, separate manufacturers reports were submitted covering the manufacture of prepared meats at manufacturers' wholesale branches. For 1954, these establishments were classified in the wholesale trade industries, but number of production workers, cost of materials consumed in the manufacture of prepared meats and quantity and value of shipments of prepared meats manufactured on the premises were reported separately.

<sup>3</sup>Includes an indeterminate value for canned products containing less than 20 percent meat.

<sup>4</sup>Only combined totals are available for previous years; product classes 20151, 20152, 20153, and 20154: 1953, \$767,694 thousand; 1952, \$739,590 thousand; 1951, \$746,378 thousand; 1950, \$575,928 thousand; and 1947, product classes 20151 and 20152, \$304,417 thousand.

<sup>5</sup>Includes value of byproducts (fat, feathers, etc.) from small game dressing.

## MEAT PRODUCTS

20A-21

Table 7A.—LIVESTOCK SLAUGHTERED AND OTHER MATERIALS USED IN THE MEAT PACKING INDUSTRY: 1954 AND 1947

Code	Description of materials	1954				1947			
		Number of head	Delivered cost (\$1,000)	Live weight (1,000 lbs)	Chilled dressed weight (1,000 lbs)	Number of head	Delivered cost (\$1,000)	Live weight (1,000 lbs)	Chilled dressed weight (1,000 lbs)
	INDUSTRY 2011—MEAT PACKING PLANTS								
	Materials, containers, and supplies, total.....	xxx	8,458,758	xxx	xxx	xxx	7,961,274	xxx	xxx
011511	Cattle.....	21,607,392	3,436,874	20,713,315	11,256,590	18,260,251	2,986,313	16,427,945	8,591,108
011515	Calves.....	9,253,696	349,379	2,117,103	1,212,883	10,170,309	400,419	2,084,603	1,177,249
011521	Sheep and lambs.....	15,350,381	282,253	1,487,799	702,594	17,253,990	320,309	1,622,543	742,905
011525	Hogs.....	57,040,617	3,130,533	14,001,593	9,728,470	51,678,047	3,154,899	12,930,703	9,089,433
201111	Meats (fresh or cured), hides and natural casings.....	xxx	608,282	xxx	xxx	xxx	1,099,334	xxx	xxx
970000	All other materials, ingredients, containers, and supplies, including materials etc., not specified by kind <sup>1</sup> .....	xxx	651,437	xxx	xxx				

Note: These statistics represent the year ending October 31, rather than the calendar year, since companies accounting for a high proportion of the total reported on an October 31 fiscal year basis. The differences between fiscal and calendar year slaughter for 1954 were negligible except for hogs, for which the calendar year total exceeded the fiscal year by a little over 2 percent. The differences were negligible for all species for 1947. Department of Agriculture estimates of total commercial slaughter (excluding farm slaughter) for 1954 were as follows: cattle, 25,016 thousand head; calves, 12,746 thousand head; sheep and lambs, 15,920 thousand head; hogs, 63,551 thousand (year ending October 31). The differences between these figures and the corresponding Census totals in this table are accounted for by (1) establishments classified in Industry 2011 which did not report livestock slaughter (see discussion of "materials not specified by kind" in footnote), (2) establishments classified in wholesale and retail trade, which were not included in the Census of Manufactures, such as locker plants, retail butcher shops, and wholesale meat jobbers, (3) establishments with no paid employees, which were excluded from Census coverage, (4) establishments not subject to Social Security payments, such as municipal abattoirs, and (5) manufacturing establishments in which slaughtering was not the primary activity, and which were consequently classified in industries other than 2011 (principally Industry 2013; see Table 7B for that industry).

xxx Not applicable.

<sup>1</sup>"Materials, not specified by kind," includes the total cost of livestock and other materials used by small establishments reporting on "short" forms (see "Introduction") and by a few establishments reporting on standard forms for which the detailed figures on livestock slaughter could not be obtained. "Materials, not specified by kind," as distinguished from "All other materials," could not be determined exactly for 1954 but is believed to be between 2 and 5 percent of the total cost of materials, parts, containers, and supplies. For 1947, "Materials, not specified by kind," amounted to 2 percent of the total.

## MANUFACTURES--INDUSTRY STATISTICS

Table 7B.--SELECTED MATERIALS CONSUMED BY THE PREPARED MEATS INDUSTRY: 1954

(All figures in thousands)

Code	Description of materials	Animals slaughtered and consumption of other materials			
		Number of head	Delivered cost (\$1,000)	Live weight (1,000 lbs)	Chilled dressed weight (1,000 lbs)
	INDUSTRY 2013--PREPARED MEATS				
	Materials, containers, and supplies, total.....	xxx	1,074,672	xxx	xxx
011511	Cattle.....	70,829	8,820	59,800	32,101
011515	Calves.....	27,363	1,109	6,497	3,691
011521	Sheep and lambs.....	8,429	184	824	434
011525	Hogs.....	229,842	12,789	69,185	50,523

## MANUFACTURES—INDUSTRY STATISTICS

Table 9.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>Establishments "specializing" in hides, skins and pelts are custom slaughterers, with hides constituting the principal products sold.

<sup>3</sup>Represents slaughtering plants with sausage and related products constituting the principal products manufactured.

## Dairy Products

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2021--	Creamery Butter
2022--	Natural Cheese
2023--	Concentrated Milk
2024--	Ice Cream and Ices
2025--	Special Dairy Products
2026--	Fluid Milk
2027--	Fluid Milk and Other Dairy Products

This group of industries comprises establishments primarily engaged in the manufacture of dairy products, including fluid milk. The group is characterized by a considerable amount of overlapping production between individual industries; plants primarily engaged in bottling and distributing fluid milk, for example, commonly manufacture other dairy products in substantial quantities, such as ice cream, butter, cottage cheese, chocolate milk, and cultured buttermilk. For this reason, the statistics for individual industries in the dairy group are not closely comparable to the commodities described in the industry titles.

The data for specialized plants shown in Tables 3 and 8 may, however, be used to estimate employment, payrolls, etc., associated with particular commodities or groups of commodities. The estimates shown in the table below were developed by this method, using the data in Table 3 for establishments with 90 percent or more primary product specialization.

These data may be interpreted as directly applicable to the commodity under consideration, without reference to the composition of the industry; for example, it may be stated that an estimated 15,800 employees were engaged in the manufacture of butter in 1954.

Prior to the 1954 Census, dairy plants were not treated statistically as one group. In accordance with the 1945 Standard Industrial Classification definitions, the 1947 Census excluded from manufacturing dairy plants manufacturing dairy products and distributing fluid milk at retail, however, in 1947, supplemental data were presented for plants producing dairy products and engaged in distributing fluid milk and cream. In presenting such data, the establishment was classified on the basis of its principal manufacturing activity, except for fluid milk and cream. Thus a plant with most of its sales volume accounted for by ice cream production and a small part by retail fluid milk sales was classified as "nonmanufacturing," but supplemental data was presented for Industry 2024 (1947 Census industry code

4024) Ice Cream and Ices to show selected statistics for such "nonmanufacturing" establishments. Although the 1947 Census coverage of plants primarily engaged in manufacturing the major dairy products, such as butter, evaporated milk, and ice cream was virtually complete, there is evidence of some undercoverage with respect to some of the minor products such as cottage cheese, chocolate milk, and cultured buttermilk. These products are commonly manufactured in fluid milk plants, and the reason for undercoverage is that the mailing lists for the 1947 Census excluded many fluid milk plants manufacturing such products. The extent of the undercoverage became apparent when all dairy plants, including fluid milk plants, were canvassed for the 1954 Census of Manufactures.

The 1947 data have been retabulated to conform to the 1954 definitions of the industries, except that comparable 1947 statistics could not be developed for the fluid milk industries (SIC 2026 and 2027). Statistics for fluid milk plants are available from the Census of Business for 1948, however, and are shown in Table 1 of this report.

The 1954 Census dairy products industries were defined by agreement with the Standard Industrial Classification Technical Committee of the Bureau of the Budget. Pending revision of the SIC, it was agreed that the Census Bureau would provide additional tabulations showing 1954 selected general statistics for the dairy products industries as defined in the 1945 edition of the Standard Industrial Classification Manual. These statistics are shown in Table A. In addition, Table B presents comparable statistics for the plants classified in nonmanufacturing industries by the 1945 definitions.

### 2021--Creamery Butter

This industry comprises establishments primarily engaged in manufacturing creamery butter.

The value of shipments of Industry 2021, Creamery Butter, in 1954 totaled \$926 million. This included shipments of primary products (creamery butter) valued at \$665 million, shipments of secondary products valued at \$228 million, and miscellaneous receipts (principally shell egg sales) of \$34 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$87 million are excluded from the \$926 million value of shipments of Industry 2021. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but the merchandising activities are reflected in other industry statistics, mainly in employment and inventory.

Industry 2021 shipments of creamery butter in 1954 represented 74 percent of its total product shipments (primary and

Commodity	Estimated industry statistics related to commodity totals, 1954				
	All employees, number	Payroll (Million dollars)	Value added by manufacture (Million dollars)	Cost of materials, etc. (Million dollars)	Value of shipments (Million dollars)
Dairy products, total.....	267,300	1,044	2,231	15,476	17,707
Butter.....	15,800	47	111	748	859
Cheese.....	15,100	43	89	524	613
Concentrated milks.....	16,000	59	228	609	837
Ice cream and ices.....	47,500	178	442	512	954
Special dairy products.....	10,100	37	71	404	475
Fluid milk and cream.....	162,800	680	1,290	2,679	3,969

<sup>1</sup>Totals for the entire dairy group include 10 to 15 percent duplication owing to the use of natural cheese in process cheese production, ice cream mix in ice cream production, etc.

secondary). In 1947, this primary product specialization ratio was 79 percent. Secondary products shipped by this industry in 1954 consisted mainly of dry milk products, \$74 million, and fluid milk and cream, \$76 million.

Industry 2021 shipments of creamery butter in 1954 represented 77 percent of the creamery butter, valued at \$859 million, shipped by all industries. This coverage ratio in 1947 was 84 percent. Other industries shipping creamery butter in 1954 consisted mainly of Industry 2027, Fluid Milk, \$108 million; Industry 2023, Concentrated Milks, \$34 million; and Industry 2022, Natural Cheese, \$24 million.

#### 2022--Natural Cheese

This industry comprises establishments primarily engaged in manufacturing all types of natural cheese and which may produce processed cheese in the same establishment. Establishments primarily engaged in manufacturing processed cheese from purchased natural cheese are classified in Industry 2025. For a detailed list of primary products of Industry 2022, refer to Table 6A, product codes 2022011 to 2022098, and 2025211 to 2025298.

The value of shipments of Industry 2022, Natural Cheese, in 1954 totaled \$551 million. This included shipments of primary products (natural cheese) valued at \$457 million, shipments of secondary products valued at \$94 million.

Industry 2022 shipments of natural cheese in 1954 represented 83 percent of its total product shipments (primary and secondary). In 1947 this primary product specialization ratio was 84 percent. Secondary products shipped by this industry in 1954 consisted mainly of fluid milk and cream, \$43 million, and creamery butter, \$24 million.

Industry 2022 shipments of natural cheese in 1954 represented 74 percent of the natural cheese, valued at \$613 million, shipped by all industries. This coverage ratio in 1947 was 83 percent. Industry 2027 Fluid Milk and Other Products was the principal other industry shipping natural cheese in 1954. These shipments, valued at \$114 million, consisted almost entirely of cottage cheese. The coverage ratio for Industry 2022 in 1954 and 1947 would be over 95 percent if based only on shipments of cheese, other than cottage cheese.

#### 2023--Concentrated Milks (Full Standard Industrial Classification Title: Condensed and Evaporated Milk)

This industry comprises establishments primarily engaged in manufacturing condensed and evaporated milk, and related products such as sweetened condensed milk (case and bulk goods); unsweetened condensed and evaporated milk; condensed and evaporated buttermilk; dried and powdered skim milk, whole milk, whey, and buttermilk; and ice cream mix and ice milk mix made for sale as such. For a detailed list of the primary products of Industry 2023, refer to Table 6A, product codes 2023111 to 2023411.

The value of shipments of Industry 2023 in 1954 totaled \$688 million. This included shipments of primary products (concentrated milk products) valued at \$566 million, and shipments of secondary products valued at \$122 million.

Industry 2023 shipments of concentrated milk products in 1954 represented 82 percent of its total product shipments (primary and secondary). In 1947 this primary product specialization ratio was 84 percent. Secondary products shipped by this industry in 1954 consisted of bulk fluid milk and cream, \$71 million, and butter, \$34 million.

Industry 2023 shipments of concentrated milk products in 1954 represented 68 percent of the concentrated milk products, valued at \$837 million, shipped by all industries. This coverage ratio in 1947 was 77 percent. Other industries shipping concentrated milk products in 1954 consisted mainly of Industry 2027, Fluid Milk and Other Products, \$149 million, and Industry 2021, Creamery Butter, \$85 million.

#### 2024--Ice cream and Ices

This industry comprises establishments primarily engaged in manufacturing ice cream, ice cream cake, ices, and other frozen desserts. For a detailed list of the primary products of Industry 2024, refer to Table 6A, product codes 2024011 to 2024098.

The value of shipments of Industry 2024, Ice Cream and Ices, in 1954 totaled \$727 million. This included shipments of primary products (ice cream and ices) valued at \$671 million, shipments of secondary products valued at \$54 million, and miscellaneous receipts of \$2 million.

Industry 2024 shipments of ice cream and ices in 1954 represented 93 percent of its total product shipments (primary and secondary). In 1947 this specialization ratio was 90 percent. Secondary products shipped by Industry 2024 in 1954 consisted mainly of bottled fluid milk and cream, \$21 million, and ice cream mix and ice milk mix, \$13 million.

Industry 2024 shipments of ice cream and ices in 1954 represented 70 percent of the ice cream and ices, valued at \$954 million, shipped by all manufacturing industries. This coverage ratio in 1947 was 87 percent. The principal other manufacturing industry shipping ice cream and ices in 1954 was Industry 2027, Fluid Milk and Other Products, \$255 million. Excluded from these figures are the ice cream and ices produced in retail ice cream stands, hotels, restaurants, and establishments with no paid employees. Comparison with Department of Agriculture figures for 1954 indicates that manufacturing establishments accounted for slightly over 80 percent of the total commercial production.

#### 2025--Special Dairy Products

This industry comprises establishments primarily engaged in manufacturing special dairy products. Important products of this industry include processed and ladle butter, malted milk, and fermented milk; processed cheese, cheese pastes, and spreads made from purchased natural cheese; instant whip (vegetable oil base), sour cream, and yogurt. Establishments primarily engaged in manufacturing creamery butter are classified in Industry 2021, natural and process cheese produced from natural cheese made in the same establishment in Industry 2022, and dried or powdered milk in Industry 2023. For a detailed list of the primary products of Industry 2025, refer to Table 6A, product codes 2025111 to 2025298.

The value of shipments of Industry 2025, Special Dairy Products, in 1954 totaled \$295 million. This included shipments of primary products (special dairy products) valued at \$265 million, shipments of secondary products valued at \$28 million, and miscellaneous receipts of \$2 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$46 million are excluded from the \$295 million value of shipments of Industry 2025. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but the merchandising activities are reflected in other detailed industry statistics mainly in employment and inventory.

Industry 2025 shipments of special dairy products in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947 this specialization ratio was 91 percent. Secondary products shipped by this industry in 1954 consisted mainly of natural cheese, \$14 million.

Industry 2025 shipments of special dairy products in 1954 represented 56 percent of the special dairy products, valued at \$475 million, shipped by all industries. The corresponding coverage ratio for 1947 is not available. The principal other industry shipping special dairy products in 1954 was Industry 2027, Fluid Milk and Other Products, \$175 million.

#### 2026--Fluid Milk and

#### 2027--Fluid Milk and Other Products

These two industries are described together because of their close relationship. They comprise establishments primarily engaged in processing (pasteurizing, homogenizing, vitaminizing, bottling) and distributing fluid milk and cream. Establishments primarily engaged in processing fluid milk and which are not engaged in the manufacture of other dairy products are classified in Industry 2026, and those primarily engaged in processing fluid milk but also manufacturing other dairy products in Industry 2027. For a detailed list of primary products of these industries, refer to Table 6A product codes 2027111 to 2027251.

The value of shipments of Industries 2026 and 2027, Fluid Milk, in 1954 totaled \$4,587 million. This included shipments of primary products (fluid milk and cream) valued at \$3,742 million, shipments of secondary products valued at \$812 million, and miscellaneous receipts of \$34 million.

## DAIRY PRODUCTS

20B-3

TABLE A.--DAIRY INDUSTRIES AS DEFINED IN THE 1945 EDITION OF S.I.C. (PRIOR TO REVISION): SELECTED GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND 1947

1954 Subindustry code <sup>1</sup>	Description of subindustry	1954					1947	
		All employees, (Number)	Production workers, (Number)	Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)	All employees, (Number)	Value added by manufacture (\$1,000)
Total	Dairy plants not engaged in house-to-house distribution of fluid milk.....	85,104	59,601	736,010	2,249,979	2,985,204	92,693	595,168
2021-00 2021-10 }	Creamery butter plants not engaged in house-to-house distribution of fluid milk.....	17,969	13,050	120,141	697,471	817,512	20,564	107,248
2022-00 2022-10 }	Natural cheese plants not engaged in house-to-house distribution of fluid milk.....	13,202	10,834	84,614	443,934	527,860	12,320	63,257
2023-00 2023-10 }	Concentrated milk plants not engaged in house-to-house distribution of fluid milk.....	12,601	10,463	163,732	495,867	659,601	16,635	148,771
2024-00 2024-10 }	Ice cream and ices plants not engaged in house-to-house distribution of fluid milk.....	34,205	19,552	311,588	376,950	688,539	35,807	228,049
2025-00 2025-10 }	Special dairy products plants not engaged in house-to-house distribution of fluid milk.....	7,127	5,702	55,935	235,757	291,692	7,367	47,843

For footnotes see end of Table B.

TABLE B.--DAIRY PLANTS EXCLUDED FROM "MANUFACTURING" IN THE 1945 EDITION OF S.I.C. (PRIOR TO REVISION): SELECTED GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND 1947

1954 Subindustry code <sup>1</sup>	Description of subindustry	1954					1947	
		All employees, (Number)	Production workers, (Number)	Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)	All employees, (Number)	Value added by manufacture (\$1,000)
Total	Dairy plants engaged in house-to-house distribution of fluid milk.....	198,324	93,592	1,520,826	3,269,293	4,790,101	( <sup>2</sup> )	( <sup>2</sup> )
2021-11	Creamery butter plants engaged in house-to-house distribution of fluid milk.....	3,050	2,010	16,912	91,994	108,902	6,545	30,969
2022-11	Natural cheese plants engaged in house-to-house distribution of fluid milk.....	712	509	4,102	19,198	23,299	432	1,805
2023-11	Concentrated milk plants engaged in house-to-house distribution of fluid milk.....	709	437	6,834	21,779	28,611	1,615	7,968
2024-11	Ice cream and ices plants engaged in house-to-house distribution of fluid milk.....	2,283	1,430	16,310	22,584	38,894	10,850	51,675
2025-11	Special dairy products plants engaged in house-to-house distribution of fluid milk.....	173	145	1,030	2,615	3,645	129	586
2026	Fluid milk only.....	14,086	9,074	98,940	253,827	352,767	( <sup>2</sup> )	( <sup>2</sup> )
2027	Fluid milk with other dairy products.....	177,311	79,987	1,376,698	2,857,296	4,233,983		

Note: The number of establishments is not shown in these tables because it was not possible to determine precisely for many small dairy establishments included in the 1954 Census, whether or not the establishment was engaged in house-to-house distribution of fluid milk (as distinguished from the sale of bulk milk or distribution of bottled milk to grocery stores, etc.). The estimated employment, value added, cost of materials, and value of shipments of such establishments attributable to house-to-house distribution (amounting to between 1 and 10 percent of the totals shown for sub-industries 2021-11 through 2025-11) are included in the statistics in Table B and excluded from those in Table A.

<sup>1</sup>The subindustry codes applied in 1954 processing are defined as follows:--2021-00 through 2025-00: Plants reporting no sales of milk or cream. 2021-10 through 2025-10: Plants reporting some sales of milk or cream, but no sales of milk on retail routes (product code 2027225). Thus the subindustry includes plants reporting milk or cream sales, not specified by kind (product codes 2027000, 2027100, 2027200). The statistics have been adjusted, as described in the Note above, to include the estimated employment, etc., of such plants in Table B rather than in Table A. 2021-11 through 2025-11: Plants reporting sales of milk on retail routes (product code 2027225).

<sup>2</sup>No comparable data available for 1947.

Shipments of fluid milk and cream by these industries in 1954 represented 82 percent of their total product shipments (primary and secondary). The 1947 primary product specialization ratio is not available. Secondary products shipped by these industries in 1954 consisted mainly of ice cream and ices, \$255 million; special dairy products (such as cultured buttermilk and chocolate milk) \$174 million; concentrated milk products, \$150 million; cottage cheese, \$114 million; and butter, \$108 million.

Shipments of fluid milk and cream by Industries 2026 and 2027 in 1954 represented 94 percent of the fluid milk and cream,

valued at \$3,969 million, shipped by all manufacturing industries. The 1947 coverage ratio is not available. Other industries shipping fluid milk and cream in 1954 consisted mainly of Industry 2023, Concentrated Milks, \$75 million; Industry 2022, Natural Cheese, \$43 million; and Industry 2024, Ice Cream and Ices, \$23 million. The total fluid milk and cream figures quoted here include both bulk shipments between plants for processing, and bottled shipments or deliveries for consumption. Bulk shipments comprise about 18 percent of the total of \$3,969 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## DAIRY PRODUCTS

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS—Continued

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Fluid milk (S.I.C. 2026-2027):								
1954.....	6,689	191,397	767,045	89,061	307,834	1,475,638	3,111,123	4,586,750
1948 <sup>10</sup> .....	6,616	149,082	472,886	(NA)	(NA)	(NA)	(NA)	3,704,003
Fluid milk only (S.I.C. 2026):								
1954.....	1,695	14,086	48,085	9,074	27,692	98,940	253,827	352,767
Fluid milk and other dairy products (S.I.C. 2027):								
1954.....	4,994	177,311	718,960	79,987	280,142	1,376,698	2,857,296	4,233,983

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October). For 1948 (Industries 2026 and 2027) the figure represents employment in Mid-November.

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>1947 data have been retabulated to conform with the 1954 definition of the industry. Prior to 1947, the industry was defined to include plants primarily engaged in fluid milk distribution but also making the specified dairy products, as well as plants whose primary activity was manufacture of the specified dairy products. The statistics previously published for 1939 and earlier years are, therefore, not comparable with 1947 and 1954.

<sup>6</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>7</sup>Prior to 1947, establishments distributing fluid milk were included in the industry. Such establishments were instructed, however, to exclude data relating to fluid milk distribution from their census reports. The totals for the second set of 1947 statistics, therefore, and the corresponding figures for earlier years, relate to dairy products other than fluid milk.

<sup>8</sup>Prior to 1904, "Creamery outter," "Natural cheese," and "Concentrated milk" were combined in one industry.

<sup>9</sup>Special dairy products were formerly classified in "Food preparations, n.e.c." Separate figures are therefore not available for years prior to 1937.

<sup>10</sup>Data from 1948 Census of Business; includes establishments formerly classified as "Dairy products distributors." "Dairy-poultry products distributors," and "Retail milk dealers." Plants with no paid employees are excluded.

## DAIRY PRODUCTS

20B-7

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2021, Creamery Butter: New England—Maine, 4 (20-99); New Hampshire, 2 (1-19); Massachusetts, 2 (1-19); Connecticut, 1 (1-19); Middle Atlantic—New Jersey, 11 (20-99); South Atlantic—Maryland, 3 (20-99); Virginia, 10 (100-249); West Virginia, 3 (1-19); North Carolina, 9 (20-99); South Carolina, 4 (1-19); Georgia, 3 (1-19); Florida, 1 (1-19); East South Central—Kentucky, 6 (500-999); Tennessee, 3 (100-249); West South Central—Arkansas, 3 (20-99); Louisiana, 2 (1-19); Mountain—Wyoming, 4 (1-19); New Mexico, 2 (1-19); Arizona, 1 (1-19); Nevada, 1 (1-19).

S.I.C. 2022, Natural Cheese: New England—Maine, 2 (1-19); New Hampshire, 1 (1-19); Connecticut, 6 (20-99); Middle Atlantic—New Jersey, 8 (20-99); West North Central—South Dakota, 4 (20-99); Nebraska, 1 (1-19); South Atlantic—Delaware, 1 (1-19); Maryland, 2 (1-19); District of Columbia, 2 (1-19); Virginia, 1 (1-19); West Virginia, 3 (20-99); North Carolina, 1 (20-99); Georgia, 1 (1-19); East South Central—Alabama, 4 (20-99); West South Central—Arkansas, 7 (100-249); Oklahoma, 2 (20-99); Texas, 4 (20-99); Mountain—Montana, 1 (20-99); Wyoming, 1 (20-99); Colorado, 5 (20-99); Arizona, 3 (20-99); Utah, 8 (20-99); Pacific—Washington, 3 (1-19); Oregon, 23 (250-499).

S.I.C. 2023, Concentrated Milk: New England—Maine, 2 (20-99); Vermont, 2 (1-19); Massachusetts, 2 (1-19); Connecticut, 2 (1-19); Middle Atlantic—New Jersey, 1 (20-99); Pennsylvania, 13 (250-499); West North Central—North Dakota, 1 (1-19); South Dakota, 2 (1-19); Nebraska, 2 (1-19); South Atlantic—Maryland, 2 (100-249); West Virginia, 1 (100-249); North Carolina, 1 (20-99); South Carolina, 1 (20-99); Georgia, 5 (20-99); Florida, 3 (1-19); West South Central—Arkansas, 3 (100-249); Oklahoma, 2 (20-99); Mountain—Colorado, 2 (20-99); Utah, 3 (100-249); Pacific—Washington, 7 (100-249); Oregon, 4 (20-99).

S.I.C. 2024, Ice Cream and Ices: New England—New Hampshire, 9 (20-99); Vermont, 4 (100-249); Rhode Island, 24 (250-499); West North Central—North Dakota, 3 (20-99); South Dakota, 8 (100-249); South Atlantic—Delaware, 6 (100-249); District of Columbia, 9 (500-999); Mountain—Idaho, 8 (20-99); Wyoming, 4 (20-99); New Mexico, 3 (20-99); Nevada, 3 (20-99).

S.I.C. 2025, Special Dairy Products: Northeast—Vermont, 1 (1-19); Massachusetts, 5 (20-99); Rhode Island, 1 (1-19); Connecticut, 1 (1-19); New Jersey, 3 (20-99); Pennsylvania, 12 (100-249); East North Central—Indiana, 3 (100-249); Illinois, 15 (1,558); West North Central—Minnesota, 3 (1-19); Iowa, 1 (1-19); Nebraska, 1 (1-19); Kansas, 1 (1-19); South—Maryland, 3 (1-19); District of Columbia, 1 (1-19); Virginia, 1 (1-19); South Carolina, 1 (1-19); Georgia, 1 (250-499); Florida, 2 (1-19); Kentucky, 3 (1-19); Tennessee, 5 (20-99); Alabama, 2 (20-99); Louisiana, 1 (1-19); Oklahoma, 2 (20-99); Texas, 4 (500-999); Mountain—Idaho, 3 (100-249); Arizona, 1 (1-19); Utah, 1 (1-19); Pacific—Washington, 2 (20-99); California, 12 (100-249).

S.I.C. 2026, Fluid Milk Only: East North Central—Ohio, 51 (250-499); Indiana, 29 (250-499); West North Central—Minnesota, 40 (500-999); Iowa, 33 (250-499); North Dakota, 1 (1-19); South Dakota, 9 (20-99); Nebraska, 10 (20-99); Kansas, 20 (20-99); South—Delaware, 3 (20-99); South Carolina, 14 (20-99); Alabama, 10 (20-99); Arkansas, 15 (20-99); Oklahoma, 14 (20-99); Mountain—Montana, 8 (20-99); Idaho, 8 (20-99); Wyoming, 5 (20-99); Colorado, 17 (20-99); New Mexico, 7 (20-99); Arizona, 7 (1-19); Utah, 7 (1-19); Nevada, 2 (1-19).

<sup>2</sup>Not shown because of the inclusion of a relatively large number of small establishments for which man-hours data were not obtained. The estimated man-hours figure for this industry is included, however, in the totals (shown in state publications and the summary volume) for the 3-digit and 2 digit industry groups.

## MANUFACTURES—INDUSTRY STATISTICS

Materials, supplies, fuel, etc.....do....	31,961	21,322	3,517	62,776	17,362
Expenditures for plant and equipment, total.....do....	28,454	5,825	7,831	95,659	32,753
Capital expenditures, new.....do....	25,733	5,776	7,496	91,414	31,635
New structures and additions to plant.....do....	4,255	2,322	1,222	18,608	5,680
New machinery and equipment.....do....	21,478	3,453	6,274	72,805	25,954
Expenditures for used plant and equipment.....do....	2,721	( <sup>7</sup> )	( <sup>7</sup> )	4,245	1,118
Horsepower rating of power equipment at end of 1954:					
Horsepower of prime movers and electric motors driven by purchased energy, total.....1,000 hp..	223	33	25	556	161
Engines, etc., driving electric generators.....do....	6	3	1	20	2
Engines, etc., not driving electric generators.....do....	4	2	2	28	9
Electric motors driven by purchased energy.....do....	213	28	22	508	150
Electric motors driven by energy generated at the establishment.....do....	( <sup>8</sup> )	1	( <sup>8</sup> )	3	( <sup>8</sup> )

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Table 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Not shown because of the inclusion of a relatively large number of small establishments for which man-hour figures were estimated. The data for this industry are included, however in the totals (shown in State publications and the summary volume) for the 3-digit and 2-digit industry groups. <sup>4</sup>Less than 500 tons. <sup>5</sup>Less than \$5,000. <sup>6</sup>Less than 500 thousand kwh. <sup>7</sup>Less than \$500 thousand. <sup>8</sup>Less than 500 hp.

## MANUFACTURES--INDUSTRY STATISTICS

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

Ind. code	Industry and item	Total, all establishments	Establishments with an average of—									
			1-4 em- ployees	5-9 em- ployees	10-19 em- ployees	20-49 em- ployees	50-99 em- ployees	100-249 employees	250-499 employees	500-999 employees	1,000-2,499 employees	2,500 employees and over

NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

## DAIRY PRODUCTS

20B-15

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between dairy products, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Prod. class code		Creamery butter (S.I.C. 2021)	Natural cheese (S.I.C. 2022)	Concentrated milk (S.I.C. 2023)	Ice cream and ices (S.I.C. 2024)	Special dairy products (S.I.C. 2025)	Fluid milk only (S.I.C. 2026)	Fluid milk and other products (S.I.C. 2027)	Poultry dressing plants (S.I.C. 2015)	Other industries	All industries

xxx Not applicable.

NA Not available.

<sup>1</sup>Code 2024098 has been combined with code 2024011.<sup>2</sup>These products are largely produced by fluid milk plants, only part of which were included in the 1947 Census. Data on the total shipments of these products for 1947 are therefore, not available.<sup>3</sup>The relatively small amount reported under product code 2023215 was combined with product code 2023211 to avoid disclosure of individual company operations.

## DAIRY PRODUCTS

20B-17

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

				California.....	271,319

Note: Data from the Annual Surveys of Manufactures for 1950-1953 have been omitted from this table because the Annual Survey did not include dairy plants engaged in the distribution of fluid milk, and the product statistics are, therefore, not comparable to those for 1947 and 1954.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 20231, Maryland; 20232, New York, Pennsylvania, Minnesota, Iowa, Kansas, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Kentucky, Mississippi, Arkansas, Texas, Idaho, Colorado, Utah, Washington, and California; 20233, Maine, Vermont, and Maryland; 20234, Maryland; 20240, Delaware and South Carolina; 20252, Indiana, Illinois, Georgia, Oklahoma, Texas, Idaho, Washington, and California; 20270, Virginia, Florida, and Texas.

<sup>2</sup>Data for 1947 are incomplete since only part of the fluid milk plants were included in the 1947 Census of Manufactures.

## MANUFACTURES—INDUSTRY STATISTICS

Table 7.—MATERIALS CONSUMED, BY KIND: 1954

Code	Description of materials	Unit of measure	Dairy products industries, total (Group 202)		Industry 2021—Creamery butter	
			Quantity	Delivered cost (\$1,000)	Quantity	Delivered cost (\$1,000)
	Materials, containers and supplies, total.....	.....	xxx	5,583,420	xxx	777,083

xxx Not applicable. <sup>1</sup>These figures represent purchased materials (or materials transferred from other plants of the same company) and do not include materials made and consumed in the same plant.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture	Cost of materials, etc.	Value of shipments
			Number	Payroll	Number	Man-hours	Wages

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>Represents establishments distributing fluid milk only.

<sup>3</sup>Not shown because of the inclusion of a relatively large number of small establishments for which man-hours figures were estimated. The data for this industry are included, however, in the totals (shown in State publications and the summary volume) for the 3-digit and 2-digit industry groups.

<sup>4</sup>Represents establishments distributing fluid milk and manufacturing other dairy products.

## Canning, Preserving, and Freezing

This report shows 1954 Census of Manufactures statistics for establishments primarily engaged in canning, preserving, and freezing of all foods except canned meats, included in Industry Group 201 Meat Products; dairy products, Industry Group 202 Dairy Products, and the relatively small amounts of precooked foods classified in Miscellaneous Prepared Foods, N.E.C., Industry 2099. Establishments primarily engaged in canning, preserving and freezing foods have been classified in each of the following seven industries, described in detail below:

Code	Title
2031--Canned Sea Foods	
2032--Cured Fish	
2033--Canned Fruits and Vegetables	
2034--Dehydrated Fruits and Vegetables	
2035--Pickles and Sauces	
2036--Packaged Seafood	
2037--Frozen Fruits and Vegetables	

Establishments classified in the canning and preserving industries usually are located in the growing areas, and specialize in the processing of the products grown in the vicinity of the plant. Although individual establishments tend to specialize, companies in these industries usually produce a more or less complete line of products through the ownership and operation of a number of establishments.

Employment in many of these establishments is characterized by sharp seasonal fluctuations, reaching a peak during the harvest season. Employment data, as shown in the Census of Manufactures tables, represents the average of all employees on the payroll at any time during twelve payroll periods, and will always be greater than the average number of persons at work (See Introduction). Labor fluctuations and turnover are quite pronounced in this group of industries and since these are the two factors contributing most to the spread between persons actually at work and the average annual employment, the difference in these industries is greater than for manufacturing establishments generally. The man-hour statistics shown in Tables 2 and 3 represent the total hours actually worked by production workers, and consequently are more reliable as a measure of labor input than are the figures on average number of employees.

In most sections of the country, the crop is usually harvested and processed within a calendar year. However, in the relatively few instances where this period extends beyond the end of the calendar year, reports were based on a crop year and cover a twelve month period ending early in 1955.

Products canned or frozen at farm produce assembly or purchasing stations, at frozen food lockers, at wholesale or retail establishments, or on farms, whether for home consumption or for resale, are not included in the Census of Manufactures statistics.

Because of the difficulty of securing adequate data on shipments from most establishments included in this group of industries, value of production rather than value of shipments was called for on the 1954 Census of Manufactures questionnaires (except for Industry 2034, Dehydrated Fruits and Vegetables). Production data, rather than shipments, were also reported in the 1947 Census of Manufactures.

### 2031--Canned Seafood

This industry comprises establishments primarily engaged in cooking and canning fish, shrimps, oysters, clams, and other seafoods. Establishments primarily engaged in shucking and packing fresh oysters in non-sealed containers, or freezing and packaging fresh fish are included in Industry 2036, Pack-

aged Seafood; frozen cooked fish are classified in Industry 2099, Food Preparations, N.E.C. For a detailed list of the primary products of Industry 2031, refer to Table 6A, product codes 2031011 to 2031051.

The value of production of Industry 2031, Canned Seafood, in 1954 totaled \$238 million. This included production of primary products (canned seafood) valued at \$225 million, production of secondary products valued at \$11 million, and miscellaneous receipts of \$3 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$27 million are excluded from the \$238 million value of shipments of Industry 2031. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2031 production of canned seafood in 1954 represented 96 percent of its total production (primary and secondary). In 1947, this primary product specialization ratio was 91 percent.

Industry 2031 production of canned seafood in 1954 represented 94 percent of the canned seafood valued at \$238 million produced by all industries. This coverage ratio in 1947 was 96 percent. Other industries producing canned seafood included Industry 2033, Canned Fruits and Vegetables, \$7 million, and Industry 2036, Packaged Seafood, \$4 million.

### 2032--Cured Fish

This industry comprises establishments primarily engaged in smoking, salting, drying, or otherwise curing fish for the trade. The products of the industry consist chiefly of smoked salmon, herring, whitefish, chub, cisco, etc., and salted and pickled fish for further processing, in addition to that produced ready for consumption. For a detailed list of primary products of this industry, refer to Table 6A, product codes 2032011 to 2032098.

The value of production of Industry 2032, Cured Fish, in 1954 totaled \$36 million. This included production of primary products (cured fish) valued at \$35 million, and production of secondary products valued at \$1 million.

Industry 2032 production of cured fish in 1954 represented 97 percent of its total production (primary and secondary). In 1947, this specialization ratio was also 97 percent.

Industry 2032 production of cured fish in 1954 represented 91 percent of the cured fish, valued at \$38 million, produced by all industries. This coverage ratio in 1947 was 88 percent.

2033--Canned Fruits and Vegetables (Full Standard Industrial Classification Title: Canned Fruits, Vegetables, Poultry, and Soups; Preserves, Jams, and Jellies)

This industry comprises establishments primarily engaged in canning fruits, vegetables, and poultry, and fruit and vegetable juices (including soups), and in manufacturing preserves, jams, and jellies. Important products of this industry include canned vegetables (including canned baked beans, and tomato cocktail); fruit and vegetable juices (canned, bottled, and in bulk); canned spaghetti; canned soups (except seafoods--Industry 2031); canned fruits (including fruit salad and fruit cocktail); preserves; jams, jellies; baby food, except meats; fruit butters; and maraschino cherries. For a detailed list of primary products of Industry 2033, refer to Table 6A, product codes 2033111 to 2033898.

The SIC title and definition for Industry 2033 have been amended by the Bureau of the Budget to include canned poultry in this industry rather than Industry 2015, Poultry Dressing Plants. The 1947 Census and subsequent Annual Survey of Manufactures classifications also reflect this change in definition.

The value of production of Industry 2033, Canned Fruits and Vegetables, in 1954 totaled \$2,229 million. This included production of primary products (canned fruits and vegetables) valued at \$1,990 million, production of secondary products valued at \$225 million, and miscellaneous receipts of \$14 million.

Industry 2033 production of canned fruits and vegetables in 1954 represented 90 percent of its total production (primary and secondary). In 1947, this primary product specialization ratio was 91 percent. Secondary products produced by this industry in 1954 consisted mainly of catsup and other tomato sauces, \$68 million; frozen fruits and vegetables, \$55 million; and pickles and sauces, except tomato, \$24 million.

Industry 2033 production of canned fruits and vegetables, in 1954 represented 94 percent of the canned fruits and vegetables, valued at \$2,113 million, shipped by all industries. This coverage ratio in 1947 was also 94 percent.

**2034—Dehydrated Fruits and Vegetables** (Full Standard Industrial Classification Title: Dried and Dehydrated Fruits and Vegetables)

This industry comprises establishments primarily engaged in sundrying or artificially dehydrating fruits and vegetables, including packaged soup mix prepared from dehydrated ingredients. Important products of this industry include dried dates, dried olives, dried prunes, dried raisins, and other dried fruits and vegetables. Establishments which purchase dried fruits and grade and package them for market are classified in Wholesale Trade, S.I.C. 5059.

Since a large proportion of the total commercial production of dried fruits is accounted for by wholesale establishments not included in the Census of Manufactures, no detailed figures on production or shipments were obtained for Industry 2034. Dried fruits, vegetables, and soup mix are grouped under product code 2034011 in Table 6A.

The value of shipments of Industry 2034, Dehydrated Fruits and Vegetables, in 1954 totaled \$192 million. This included shipments of primary products (dehydrated fruits and vegetables) valued at \$180 million, shipments of secondary products valued at \$10 million, and miscellaneous receipts of \$2 million.

Industry 2034 shipments of dehydrated fruits and vegetables in 1954 represented 95 percent of its total product shipments (primary and secondary). In 1947, this specialization ratio was 96 percent.

Industry 2034 shipments of dehydrated fruits and vegetables in 1954 represented 97 percent of the dehydrated fruits and vegetables, valued at \$185 million, shipped by all manufacturing industries. This coverage ratio in 1947 was 90 percent. (These coverage ratios would be decreased substantially if total commercial production, rather than shipments by manufacturing industries, were taken as the base.)

**2035—Pickles and Sauces** (Full Standard Industrial Classification Title: Pickled Fruits and Vegetables, Vegetable Sauces and Seasonings; Salad Dressing)

The industry comprises establishments primarily engaged in pickling, brining fruits and vegetables, and in manufacturing salad dressings, vegetable relishes, sauces, and seasonings. Important products of this industry include pickles; ketchup (canned, bottled, and in bulk); brined fruits and vegetables; prepared horseradish; sauerkraut in bulk; prepared mustard; tomato chili sauce, and other vegetable sauces; mayonnaise; cooked salad dressings and raw salad dressings, such as French, Thousand-Island, and Russian; and sandwich spread, salad dressing base.

The SIC definition for this industry has been amended by the Bureau of the Budget to include "sandwich spread, salad dressing base" in this industry rather than in Industry 2099, Miscellaneous Food Preparations, N.E.C. 1947 Census and subsequent Annual Survey of Manufactures classifications also reflect this change in definition.

Establishments primarily engaged in manufacturing canned and bottled olives; canned sauerkraut, tomato paste, tomato pulp,

and tomato puree are classified in Industry 2033, Canned Fruits and Vegetables.

For a detailed list of the primary products of Industry 2035 refer to Table 6A, product codes 2035111 to 2035511.

The value of production of Industry 2035, Pickles and Sauces, in 1954 totaled \$482 million. This included production of primary products (pickles and sauces) valued at \$385 million, production of secondary products valued at \$94 million, and miscellaneous receipts of \$3 million.

Industry 2035 production of pickles and sauces in 1954 represented 80 percent of its total production (primary and secondary). In 1947, this primary product specialization ratio was 84 percent. Secondary products produced by this industry in 1954 included shortening and cooking oils, \$16 million; jams, jellies, and preserves, \$10 million; and canned fruits and vegetables, \$20 million.

Industry 2035 production of pickles and sauces in 1954 represented 75 percent of the pickles and sauces, valued at \$517 million, produced by all industries. This coverage ratio in 1947 was 69 percent. Other industries producing pickles and sauces consisted mainly of Industry 2033, Canned Fruits and Vegetables, \$90 million; and Industry 2099, Miscellaneous Food Preparations, N.E.C., \$25 million.

It should be noted that the coverage ratio for Industry 2035 is reduced because of the significant production of catsup and other tomato sauces (product class 20351) in other industries, mainly Industry 2033. In 1954, Industry 2035 accounted for less than half of the production of this class of products.

**2036—Packaged Seafood** (Full Standard Industrial Classification Title: Fresh or Frozen Packaged Fish)

The new industry classification, Fresh or Frozen Packaged Fish, was established by the Bureau of the Budget just prior to the 1954 Census. It comprises establishments primarily engaged in preparing fresh or frozen packaged fish and other seafood formerly included in Industry 2037. Industry 2036 also includes establishments primarily engaged in shucking and packing fresh oysters in nonsealed containers, which were formerly classified in wholesale trade. Establishments primarily engaged in manufacturing canned seafood are classified in Industry 2031, Canned Seafood and cured fish in Industry 2032, Cured Fish. Also excluded from Industry 2036 are cold storage warehouses, frozen food locker plants, and retail stores freezing or packaging fresh seafood.

For a detailed list of the primary products of Industry 2036, refer to Table 6A, product codes 2036111 to 2036211.

The value of production of Industry 2036, Packaged Seafood, in 1954 totaled \$165 million. This included production of fresh and frozen packaged seafood (primary products) valued at \$151 million, production of secondary products valued at \$10 million, and miscellaneous receipts of \$5 million.

Industry 2036 production of fresh and frozen packaged seafood (primary products) in 1954 represented 94 percent of its total production (primary and secondary). Secondary products produced by this industry in 1954 consisted mainly of canned and cured seafood products, \$6 million.

Industry 2036 production of fresh and frozen packaged seafood in 1954 represented 95 percent of the fresh and frozen packaged seafood, valued at \$158 million, produced by all manufacturing industries. The principal other industry producing fresh and frozen packaged seafood was Industry 2031, Canned Seafood, \$4 million.

**2037—Frozen Fruits and Vegetables** (Full Standard Industrial Classification Title: Frozen Fruits, Fruit Juices, and Vegetables)

This industry comprises establishments primarily engaged in quick-freezing and cold packing (freezing) vegetables, fruits, and fruit juices.

Establishments primarily engaged in manufacturing canned and bottled fruits, fruit juices, and vegetables are classified in Industry 2033, Canned Fruits and Vegetables; and concentrated

fruit juice products (not frozen) for fountain use, in Industry 2095, Flavorings.

The SIC title and definition for Industry 2037 have been amended by the Bureau of the Budget to exclude plants primarily engaged in preparing frozen packaged seafoods. Frozen packaged seafood, formerly included in this industry, is now part of Industry 2036, Fresh or Frozen Packaged Fish. The 1947 statistics for Industry 2037 have not been retabulated to reflect this change in definition. The noncomparability due to the change in definition is between 10 and 20 percent of the 1947 figures.

Excluded from this industry, in 1954 and earlier years, are establishments primarily engaged in packing fruits and vegetables for freezing but not freezing the product; cold storage warehouses freezing foods for others, frozen food locker and other establishments freezing for individual consumers or farms and ranches producing frozen fruits and vegetables.

For a detailed list of primary products of Industry 2037 refer to Table 6A, product codes 2037111 to 2037298.

The value of production of Industry 2037, Frozen Fruits and Vegetables, in 1954 totaled \$417 million. This included production of primary products (frozen fruits and vegetables) valued at \$363 million, production of secondary products valued at \$50 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$4 million.

Industry 2037 production of frozen fruits and vegetables (primary products) in 1954 represented 88 percent of its total production (primary and secondary). Secondary products produced in this industry in 1954 consisted mainly of canned fruits, fruit juices, and vegetables, \$29 million.

Industry 2037 production of frozen fruits and vegetables and frozen fruit juices in 1954 represented 84 percent of the frozen fruits and vegetables and frozen fruit juices, valued at \$431 million, produced by all manufacturing industries. Other industries producing frozen fruits and vegetables and frozen fruit juices consisted mainly of Industry 2033, Canned Fruits and Vegetables, \$55 million; and 2099, Food Preparations, N.E.C., \$8 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES—INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup>	Cost of materials, etc. <sup>3</sup>	Value of shipments <sup>4</sup>

NA Not available.

<sup>1</sup>For 1954, the all employees figure represents the average number on the payroll at any time during the pay periods ended nearest the fifteenth of each month; the number of production workers was calculated by subtracting from the "all employees" total, the average number of nonproduction employees for the four mid-month pay periods for which such information was collected: The pay periods ending nearest the 15th of March, May, August and November. For the period 1949-1953, both figures are based on employment for these four months. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction employees for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1949-1953, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>"Canned sea food" and "Cured fish" formerly constituted one industry. Separate figures are, therefore, not available prior to 1937.

<sup>7</sup>The figures for 1939 and 1937 were obtained by combining the figures for industries formerly designated "Canned and dried fruits and vegetables" and "Preserves, jams and jellies." The figures for 1939 are not entirely comparable with those for 1937. Value added by manufacture for 1939 on a basis comparable with 1937 was \$242.4 million.

<sup>8</sup>Canning and preserving, except fish, "Pickles and sauces," and "Frozen foods" formerly constituted one industry. Separate figures are, therefore, not available prior to 1937.

<sup>9</sup>A substantial part of the total commercial output of dried fruits is packed in establishments classified in Wholesale Trade (S.I.C. 5049) and included in the Census of Business. See Introductory text for industry. No comparable figures are available for years prior to 1947.

<sup>10</sup>The figures for 1939 and 1937 were obtained by combining the figures for the former industries "Pickled fruits and vegetables, etc.," and "Salad dressings."

<sup>11</sup>Industry 2036 includes establishments formerly classified in Wholesale Trade (S.I.C. 5046) and no comparable figures are available for years prior to 1954. See Introductory text for industry.

<sup>12</sup>Previously published figures for 1939 have been revised to include statistics for 25 establishments primarily engaged in cold-packing fruits and vegetables. Value added for 1939, before revision and on a basis comparable with 1937, was \$3.9 million.

## MANUFACTURES—INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see Introduction "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2031, Canned Seafood: Northeast and North Central—Massachusetts, 4 (20-99); Rhode Island, 1 (20-99); Connecticut, 2 (1-19); New York, 9 (100-249); Pennsylvania, 1 (1-19); Ohio, 2 (1-19); Wisconsin, 1 (1-19); South—Delaware, 1 (20-99); Florida, 4 (20-99); Alabama, 2 (100-249); Oklahoma, 1 (20-99).

S.I.C. 2032, Cured Fish: Northeast and North Central—Maine, 8 (20-99); Massachusetts, 3 (20-99); Rhode Island, 1 (20-99); New Jersey, 1 (1-19); Pennsylvania, 3 (20-99); Ohio, 3 (1-19); Michigan, 4 (20-99); Wisconsin, 4 (20-99); Minnesota, 1 (1-19); South Atlantic—Virginia, 3 (20-99); North Carolina, 3 (20-99); Florida, 2 (1-19); West South Central—Louisiana, 8 (20-99); Pacific—Washington, 5 (20-99); Oregon, 1 (20-99).

S.I.C. 2033, Canned Fruits and Vegetables: New England—New Hampshire, 2 (20-99); Vermont, 4 (20-99); Rhode Island, 1 (1-19); Connecticut, 7 (100-249); West North Central—Missouri, 13 (250-499); Kansas, 2 (100-249); South Atlantic—South Carolina, 8 (20-99); Georgia, 25 (1,390); East South Central—Alabama, 2 (250-499); Mississippi, 7 (250-499); Mountain—Montana, 6 (20-99); New Mexico, 3 (1-19); Arizona, 8 (100-249).

S.I.C. 2034, Dehydrated Fruits and Vegetables: Northeast and North Central—New York, 15 (250-499); New Jersey, 3 (100-249); Pennsylvania, 1 (1-19); Indiana, 1 (1-19); Illinois, 8 (250-499); Nebraska, 1 (1-19); South and West—Virginia, 1 (1-19); Georgia, 1 (250-499); Mississippi, 1 (1-19); Louisiana, 1 (1-19); Idaho, 4 (100-249); Arizona, 1 (1-19); Oregon, 2 (20-99).

S.I.C. 2035, Pickles and Sauces: New England—Maine, 2 (20-99); Rhode Island, 2 (20-99); North Central—Indiana, 26 (1,000-2,499); Minnesota, 14 (100-249); Iowa, 13 (250-499); Nebraska, 3 (20-99); Kansas, 6 (100-249); South Atlantic—Delaware, 5 (100-249); District of Columbia, 3 (20-99); West Virginia, 1 (1-19); Florida, 7 (20-99); East South Central—Kentucky, 3 (250-499); Tennessee, 6 (20-99); Mississippi, 2 (100-249); West South Central—Arkansas, 4 (100-249); Oklahoma, 7 (20-99); Mountain—Montana, 1 (1-19); Idaho, 1 (1-19); New Mexico, 1 (1-19); Arizona, 1 (20-99); Utah, 4 (100-249); Pacific—Washington, 15 (250-499); Oregon, 9 (100-249).

S.I.C. 2036, Fresh or Frozen Packaged Fish: New England—Maine, 9 (250-499); New Hampshire, 2 (20-99); Rhode Island, 1 (20-99); Middle Atlantic—New Jersey, 10 (250-499); Pennsylvania, 5 (250-499); North Central—Ohio, 3 (20-99); Wisconsin, 3 (20-99); Minnesota, 1 (1-19); South Atlantic—North Carolina, 8 (20-99); South Carolina, 2 (1-19); East South Central—Kentucky, 1 (1-19); Tennessee, 1 (1-19); Alabama, 2 (20-99); Mississippi, 7 (20-99).

S.I.C. 2037, Frozen Fruits and Vegetables: New England—Maine, 2 (20-99); Massachusetts, 4 (20-99); Middle Atlantic—New Jersey, 6 (1,543); Pennsylvania, 11 (500-999); North Central—Ohio, 1 (100-249); Indiana, 1 (1-19); Illinois, 3 (1-19); Wisconsin, 2 (20-99); Minnesota, 2 (500-999); Iowa, 1 (1-19); Missouri, 4 (1-19); South Atlantic—Virginia, 4 (250-499); North Carolina, 1 (20-99); South Carolina, 1 (1-19); Georgia, 2 (20-99); East South Central—Kentucky, 3 (20-99); West South Central—Louisiana, 4 (250-499); Oklahoma, 1 (20-99); Idaho, 2 (500-999); New Mexico, 1 (1-19); Utah, 2 (20-99).

Note: Detailed figures may not add to the totals because of independent rounding.   xxx Not applicable.   NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%.

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Less than 500 tons.

<sup>4</sup>Less than 500 thousand kwh.

<sup>5</sup>Less than \$500 thousand.

<sup>6</sup>Less than 500 hp.

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.<sup>3</sup>1947 data for Industry 2036, Packaged Seafood, included with Industry 2037, Frozen Fruits and Vegetables. See Table 1, footnote 11. The 1947 shipments figures for Industry 2037 are overstated by about 20 percent due to this change in definition (see text for industry). The coverage and specialization ratios for 1947 are, however, approximately the same as those which would have been derived had the 1947 data been retabulated to reflect the changed definition of Industry 2037.<sup>4</sup>The coverage ratios for this industry would be substantially smaller if total commercial production, including production in wholesale establishments, were compared to shipments of Industry 2034 (see text for industry).

## CANNING, PRESERVING, AND FREEZING

20C-13

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

2037000	Frozen fruits and vegetables, not specified by kind.....	.....	xxx	6,622	xxx	3,836

xxx Not applicable.

NA Not available.

D Withheld to avoid disclosure of figures for individual companies. Where a (D) appears for a particular can size, the value is included in the "Miscellaneous tin or glass" category for the product.

<sup>1</sup>Data from Fish and Wildlife Service, Department of the Interior. The total value differs slightly from the corresponding Census of Manufactures figures shown in Tables 5A and 5B, owing to differences in coverage, between the Fish and Wildlife Service survey and the Census of Manufactures.

<sup>2</sup>No. 2 1/2 glass combined with No. 2 1/2 tin.

<sup>3</sup>No detailed statistics were collected for this category owing to the fact that a large part of the total commercial output is packed in establishments classified in Wholesale Trade (S.I.C. 5049) and included in the Census of Business. See Introductory Text for Industry 2034.

<sup>4</sup>Not including products frozen on farms. Comparison with data published by the National Association of Frozen Food Packers indicates that farm production was of some importance for frozen fruits and vegetables but negligible for juices.

<sup>5</sup>Figures are subject to revision after further review. Revisions to this table will be issued as a supplementary report.

## MANUFACTURES—INDUSTRY STATISTICS

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1.)

North Central.....	192			Washington.....	27,508
				Oregon.....	15,533
				California.....	45,907

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 20331, Massachusetts and West Virginia; 20332, Alabama; 20333, Maine, Massachusetts, Nebraska, Kansas, and Mississippi; 20334, Massachusetts, Ohio, Arkansas, and Texas; 20335, Delaware; 20338, Michigan, Wisconsin, Tennessee, Alabama, Arkansas, and Colorado; 20352, Minnesota, Kentucky, Alabama, Mississippi, Arkansas, Texas, and Colorado; 20354, Massachusetts, Virginia, South Carolina, Louisiana, and Washington; 20361, Maine; 20362, Maine; 20371, Virginia; 20372, Maine, New Jersey, Pennsylvania, Michigan, Minnesota, Virginia, Florida, Tennessee, Arkansas, and Idaho.

<sup>2</sup>This product was not covered in the Census of Manufactures prior to 1954.

## MANUFACTURES—INDUSTRY STATISTICS

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

	75-89% specialization.....	21	2,828	7,316	2,477	4,599	5,719	19,335	23,320	42,655

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

## Grain Mill Products

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

Code	Title
2041--	Flour and Meal
2042--	Prepared Animal Feeds
2043--	Cereal Breakfast Foods
2044--	Rice Milling
2045--	Flour Mixes

This group includes the principal grain-consuming industries. Statistics on grains used (Table 7) are presented separately for each of the industries included in the group; similar data for other industries using grain (Industry 2094, Corn Wet Milling, and Group 208, Beverages) are shown in other reports.

Establishments in this group of industries, particularly Industries 2041 and 2042, frequently are engaged in supplementing their manufacturing activities with sales of grain and other commodities produced elsewhere. The value of such resales has been excluded from the value of shipments, cost of materials, and value added by manufacture; however, these activities are reflected in other industry statistics mainly employment and inventories. Establishments engaged both in manufacturing and resale activities were included in the Census of Manufactures if the value added by manufacturing exceeded the value added by resales.

The titles for Industries 2043, 2044 and 2045 have been revised from those shown in reports of the 1947 Census. The definitions of the industries, however, have not been changed.

2041--Flour and Meal (Full Standard Industrial Classification Title: Flour and Other Grain-Mill Products)

This industry comprises establishments primarily engaged in milling flour or meal from grain, except rice (Industry 2044, Rice Milling). Such flour and grain mills may also produce cracked grain used as cereal or stock dry feed, or blended and prepared flours, principally from products ground in the same establishment. Important products of this industry include wheat flour (white; semolina; farina; granular; graham; whole-wheat-blended, phosphated, enriched, self-rising, and other prepared flour); rye, buckwheat, corn, and other flour; prepared flour mixes and corn meal; corn grits and flakes for brewers' use; and bran and middlings.

Establishments primarily engaged in manufacturing prepared flour mixes are classified in Industry 2041 if the principal raw material is flour milled in the same establishment; if the flour is milled elsewhere, such blending plants are classified in Industry 2045, Blended and Prepared Flour. Establishments primarily engaged in manufacturing prepared animal feeds from grain are classified in Industry 2042, Prepared Animal Feeds. Establishments primarily engaged in custom milling and other agricultural services are not included in the Census of Manufactures.

For a detailed list of primary products of Industry 2041, refer to Table 6A, product codes 2041111 to 2041498 and codes 2045011 to 2045049.

The value of shipments of Industry 2041, Flour and Meal, in 1954 totaled \$1,859 million. This included shipments of primary products (flour and meal) valued at \$1,734 million, shipments of secondary products valued at \$119 million, and miscellaneous receipts (mainly custom milling of grain owned by others) of \$6 million. Excluded from these totals are \$143 million of products bought and resold without further processing (merchandising).

Industry 2041 shipments of flour (including flour mixes) and meal (primary products) in 1954 represented 94 percent of its total manufactured product shipments (primary and secondary). In 1947, this primary product specialization ratio was 92 percent. Secondary products shipped by Industry 2041 in 1954 consisted principally of prepared animal feed (except dog and cat food), \$106 million.

Industry 2041 shipments of flour and meal in 1954 represented 84 percent of these products valued at \$2,056 million shipped by all industries. In 1947, this coverage ratio was 92 percent. In 1954, the total value of flour mixes produced in manufacturing industries amounted to \$403 million. Of this total, 48 percent or \$194 million was produced in flour mills; the remaining 52 percent was produced from purchased flour,<sup>1</sup> mainly in Industry 2045, Flour Mixes. The 1954 Census coverage ratio for Industry 2041 would be increased from 84 percent to 93 percent if applied only to flour and meal made in flour and grain mills. The comparable ratio for 1947 would be 95 percent. Other industries shipping flour and meal in 1954 consisted mainly of Industry 2042, Prepared Animal Feeds, \$79 million; and Industry 2043, Cereal Breakfast Foods, \$44 million.

2042--Prepared Animal Feeds (Full Standard Industrial Classification Title: Prepared Feeds for Animals and Fowls)

This industry comprises establishments primarily engaged in manufacturing prepared feeds for animals and fowls. Prepared feeds include those made from milled grains; animal, marine, and vegetable proteins; alfalfa meal, bone meal, calcium carbonate, manganese, and other mineral supplements; fish liver oils, distillers' solubles, and other vitamin supplements. Mills primarily engaged in the custom grinding of feeds or other agricultural services are excluded from the scope of the Census of Manufactures. For a detailed list of primary products of Industry 2042, refer to Table 6A, product codes 2042111 to 2042498.

The value of shipments of Industry 2042, Prepared Animal Feeds, in 1954 totaled \$2702 million. This included shipments of primary products (prepared animal feeds) valued at \$2546 million, shipments of secondary products valued at \$125 million, and miscellaneous receipts of \$2 million. Excluded from these totals are \$279 million of grain and other commodities bought and resold without further processing (merchandising). Establishments engaged both in manufacturing and resale activities were included in the Census of Manufactures only if the value added by manufacturing exceeded the value added by resales.

Industry 2042 shipments of prepared animal feeds (primary products) in 1954 represented 95 percent of its total manufactured product shipments (primary and secondary). In 1947, this primary product specialization ratio was also 95 percent. Secondary products shipped by this industry in 1954 consisted principally of wheat flour, corn meal, flour mixes, cereal preparations, and other grain-mill products, valued at \$69 million.

Industry 2042 shipments of prepared animal feeds in 1954 represented 90 percent of these products valued at \$2843 million shipped by all manufacturing industries. In 1947, this coverage ratio was 89 percent. Other industries shipping prepared animal feeds in 1954 consisted mainly of Industry 2041, Flour and Meal, \$106 million; Industry 2883, Soybean Oil Mills, \$60 million; Industry 2011, Meat Packing Plants, \$56 million; and Industry 2043, Cereal Breakfast Foods, \$30 million.

<sup>1</sup>The term "purchased" includes transfers from other manufacturing plants owned by the same company.

**2043—Cereal Breakfast Foods** (Full Standard Industrial Classification Title: Cereal Preparations)

This industry comprises establishments primarily engaged in manufacturing breakfast foods, coffee substitutes, and other cereal preparations from grain. Principal products of the industry are breakfast cereals made of wheat, corn, or rice, and cereal preparations to be cooked before serving, such as farina and oatmeal. Establishments primarily engaged in manufacturing cracked grain for human consumption are classified in Industry 2041, Flour and Meal, and those engaged chiefly in grinding, cracking or rolling grains for animal feed in Industry 2042, Prepared Animal Feeds. For a detailed list of primary products of Industry 2043, refer to Table 6A, product codes 2043011 to 2043098.

The value of shipments of Industry 2043, Cereal Breakfast Foods, in 1954 totaled \$346 million. This included shipments of primary products (cereal breakfast foods) valued at \$265 million, shipments of secondary products valued at \$80 million, and miscellaneous receipts of \$1 million.

Industry 2043 shipments of cereal breakfast foods (primary products) in 1954 represented 77 percent of its total manufactured product shipments (primary and secondary). In 1947, this primary product specialization ratio was 68 percent. Secondary products shipped in this industry in 1954 consisted mainly of prepared animal feeds, \$30 million; and flour and meal, \$44 million.

Industry 2043 shipments of cereal breakfast foods in 1954 represented 80 percent of these products valued at \$331 million shipped by all manufacturing industries. In 1947, this coverage ratio was 87 percent. Other industries shipping cereal breakfast foods in 1954 consisted mainly of Industry 2045, Flour Mixes, and Industry 2042, Prepared Animal Feeds.

**2044—Rice Milling** (Full Standard Industrial Classification Title: Rice Cleaning and Polishing)

This industry comprises establishments primarily engaged in cleaning and polishing rice, and in manufacturing rice flour or meal. Important products of this industry include brown rice, milled rice (including polished rice), rice polish, rice bran, and rice flour. For a detailed list of primary products of Industry 2044, refer to Table 6A, product codes 2044011 to 2044098.

The value of shipments of Industry 2044, Rice Milling, in 1954 totaled \$267 million and consisted almost entirely of primary products (milled rice and byproducts). In 1947, the primary product specialization ratio was also 100 percent. Industry 2044 accounted for all of the milled rice and byproducts manufactured and shipped by manufacturing industries in 1954. In 1947, this coverage ratio was also 100 percent.

**2045—Flour Mixes** (Full Standard Industrial Classification Title: Blended and Prepared Flour)

This industry comprises establishments primarily engaged in the preparation of self-rising or blended flour from purchased flour. Important products of this industry include plain blended flour, and phosphated, self-rising, and other kinds of prepared flour such as biscuit, cake, doughnut, and pancake flour. Establishments primarily engaged in milling flour from grain are classified in Industry 2041, Flour and Meal. For a detailed list of primary products of Industry 2045, refer to Table 6A, product codes 2045011 to 2045049.

The value of shipments of Industry 2045, Flour Mixes, in 1954 totaled \$254 million. This included shipments of primary products (flour mixes) valued at \$180 million and shipments of secondary products valued at \$74 million. Excluded from these totals are \$13 million of products bought and resold without further processing (merchandising).

Industry 2045 shipments of flour mixes (primary products) in 1954 represented 71 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 81 percent. Secondary products shipped by this industry in 1954 consisted mainly of cereal preparations and grain-mill products, \$51 million.

Industry 2045 shipments of flour mixes in 1954 represented 45 percent of the flour mixes valued at \$403 million, shipped by all industries. In 1947, this coverage ratio was 17. As indicated in the text for Industry 2041, flour mills accounted for 48 percent of these products shipped by manufacturing industries. The 1954 Census coverage ratio for Industry 2045 would be increased from 45 percent to 86 percent if applied to flour mixes made only from purchased flour (excluding flour mills). The comparable ratio for 1947 would be 67 percent. The principal other industry shipping flour mixes, in 1954, consisted of Industry 2043, Cereal Breakfast Foods, \$13 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## GRAIN-MILL PRODUCTS

20D-3

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)

## MANUFACTURES—INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Industry and census year	Establish- ments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Rice milling—Con.								
1914.....	59	1,691	1,284	1,253	646	2,423	20,616	23,039
1909.....	71	1,739	1,177	1,239	564	2,870	19,501	22,371
1904.....	74	1,928	1,189	1,492	641	2,982	13,315	16,297
1899.....	80	820	448	651	266	1,148	7,576	8,724
Flour mixes (S.I.C. 2045):								
1954.....	131	5,585	25,446	4,366	16,982	103,134	151,001	254,136
1947.....	123	3,120	8,953	2,364	5,245	24,249	54,193	78,442
1939.....	78	1,105	1,419	706	593	3,928	13,966	17,894
1937 <sup>12</sup> .....	41	(NA)	(NA)	408	373	3,909	9,725	13,634

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. (However, in the case of the "Rice milling" industry a different method was used for 1954: All employees represents the average of 12 monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November). For 1947, figures represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the all employees figure represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>The figures for 1939 include data for two establishments making soy flour. Although soy flour is now classified in the "Soybean oil mills" industry, the data for these two establishments have been included in the 1939 figures for "Flour and meal" to avoid disclosure of their figures.

<sup>7</sup>The figures for 1899-1925 are not strictly comparable with those for later years because they include data for establishments which make prepared animal feeds from grain ground in the same establishment. Such establishments have been classified in "Prepared animal feeds" since 1927.

<sup>8</sup>The figures for years prior to 1927 are not sufficiently comparable with those for later years to be shown in this table because they do not include data for manufacturers of prepared feeds who grind the grain consumed.

<sup>9</sup>This industry contains a number of small establishments some of which may have been misclassified as to industry. This would not affect the statistics other than the number of establishments.

<sup>10</sup>The figures for 1937-1954 exclude data for self-rising flour, whereas the figures for earlier years include data for this product. Value added in 1937, including data for self-rising flour, was \$69.6 million.

<sup>11</sup>Prior to 1914, "Cereal preparations" was combined with "Food preparations, n.e.c."

<sup>12</sup>The figures for 1937 are for self-rising flour only. Blended flour made from purchased flour was not classified as a manufactured product prior to 1937. No comparable figures are available prior to 1937.

## GRAIN-MILL PRODUCTS

20D-5

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2041, Flour and Meal: Northeast—New Hampshire, 1 (20-99); Rhode Island, 2 (1-19); Connecticut, 1 (1-19); New Jersey, 1 (20-99); East North Central—Indiana, 33 (1,220); Illinois, 26 (2,500-4,999); Wisconsin, 12 (250-499); West North Central—North Dakota, 4 (100-249); South Dakota, 3 (100-249); South Atlantic—District of Columbia, 1 (20-99); Virginia, 69 (500-999); West Virginia, 4 (20-99); South Carolina, 20 (100-249);

Georgia, 28 (250-499); Florida, 3 (20-99); East South Central—Tennessee, 64 (1,000-2,499); Mississippi, 3 (1-19); West South Central—Arkansas, 3 (1-19); Louisiana, 2 (20-99); Oklahoma, 16 (500-999); Mountain—Wyoming, 2 (20-99); New Mexico, 4 (20-99); Arizona, 1 (20-99); Nevada, 1 (1-19).

S.I.C. 2042, Prepared Animal Feeds: New England—New Hampshire, 4 (20-99); Vermont, 9 (500-999); Rhode Island, 2 (20-99); Connecticut, 4 (100-249); West North Central—North Dakota, 3 (1-19); Kansas, 68 (1,000-2,499); South Atlantic—District of Columbia, 1 (1-19); West Virginia, 5 (100-249);

West South Central—Louisiana, 24 (500-999); Oklahoma, 43 (500-999); Mountain—Montana, 6 (100-249); Idaho, 12 (100-249); Arizona, 18 (250-499); Utah, 17 (100-249); Nevada, 1 (1-19).

S.I.C. 2043, Cereal Preparations: Northeast—Vermont, 1 (20-99); Massachusetts, 2 (100-249); Middle Atlantic—New Jersey, 1 (20-99); Pennsylvania, 3 (20-99); East North Central—Ohio, 1 (500-999); Indiana, 2 (100-249); Illinois, 1 (1-19); West North Central—Iowa, 3 (1,000-2,499); Missouri, 4 (500-999); Nebraska, 2 (250-499); Kansas, 2 (1-19); West—Montana, 1 (1-19); Washington, 2 (20-99); California, 6 (250-499).

S.I.C. 2044, Rice Milling: South—Tennessee, 1 (20-99); Arkansas, 15 (500-999).

S.I.C. 2045, Flour Mixes: New England—Massachusetts, 3 (20-99); Rhode Island, 1 (1-19); Connecticut, 3 (20-99); Middle Atlantic—New Jersey, 3 (100-249); Pennsylvania, 3 (100-249); East North Central—Ohio, 4 (500-999); Indiana, 1 (1-19); Wisconsin, 1 (1-19); West North Central—Iowa, 1 (1-19); Missouri, 7 (100-249); Nebraska, 5 (250-499); South—Virginia, 1 (1-19); West Virginia, 1 (1-19); South Carolina, 1 (1-19); Georgia, 1 (1-19); Florida, 4 (1-19); Tennessee, 6 (20-99); Mississippi, 1 (1-19); Louisiana, 2 (1-19); West—Idaho, 2 (1-19); Utah, 1 (20-99); Washington, 3 (20-99); California, 17 (500-999).

## GRAIN-MILL PRODUCTS

20D-7

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954  
(For explanation of line captions see Introduction)

Item	Flour and meal (S.I.C. 2041) all establishments	Prepared animal feeds (S.I.C. 2042) all establishments	Cereal breakfast foods (S.I.C. 2043)	
			All establishments	Establishments with 90% or more primary product specialization
Primary product specialization ratio <sup>1</sup> .....	94	95	77	xxx
Coverage ratio <sup>2</sup> .....	84	90	80	xxx
Number of establishments, total.....	803	2,292	46	31
With 1-19 employees.....	543	1,607	19	15
With 20-99 employees.....	175	544	13	9
With 100 employees and over.....	85	141	14	7
All employees:

Capital expenditures, new.....do...	3,538	5,353	2,944
New structures and additions to plant.....do...	1,605	1,452	756
New machinery and equipment.....do...	1,932	3,901	2,188
Expenditures for used plant and equipment.....do...	( <sup>4</sup> )	982	894
Horsepower rating of power equipment at end of 1954:			
Horsepower of prime movers and electric motors driven by pur-			
chased energy, total.....1,000 hp..	58	25	7
Engines, etc. driving electric generators.....do...	5	( <sup>5</sup> )	...
Engines, etc. not driving electric generators.....do...	7	1	( <sup>5</sup> )
Electric motors driven by purchased energy.....do...	46	24	7
Electric motors driven by energy generated at the establishment.....do...	1	( <sup>5</sup> )	...

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. xxx Not applicable.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than \$500 thousand. <sup>5</sup>Less than 500 hp.

## GRAIN-MILL PRODUCTS

2043	Cereal breakfast foods.....1954..	345,843	264,751	80,365	727	77	330,970	264,751	66,219	80
	1947..	284,666	193,917	89,891	858	68	221,758	193,917	27,841	87
2044	Rice milling.....1954..	266,861	264,750	207	1,904	99	264,750	264,750	...	100
	1947..	224,741	224,162	...	579	100	224,162	224,162	...	100
2045	Flour mixes.....1954..	254,136	179,720	74,217	199	71	402,643	179,720	222,923	45
	1947..	78,442	61,437	13,947	3,058	81	363,999	61,437	302,562	17

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Includes prepared flour and flour mixes which are primary both to Industry 2041 and Industry 2045.

## GRAIN-MILL PRODUCTS

20D-11

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between grain-mill products, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. However, product class 20450 is primary to Industry 2041 as well as to Industry 2045. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Flour and meal (S.I.C. 2041)	Prepared animal feeds (S.I.C. 2042)	Cereal breakfast foods (S.I.C. 2043)	Rice milling (S.I.C. 2044)	Flour mixes (S.I.C. 2045)	Meat packing, plants (S.I.C. 2011)	Canned fruits and vegetables (S.I.C. 2033)	Soybean oil mills (S.I.C. 2883)	Other industries	All industries

2045049	Other prepared flour mixes.....	...do.....	5,782	84,645		

xxx Not applicable.

NA Not available.

<sup>1</sup>Code 2041351 has been combined with code 2041311.<sup>2</sup>Estimate based on value.<sup>3</sup>Does not include prepared feeds manufactured in retail and wholesale establishments (see text on industry).<sup>4</sup>Code 2042100 combined with code 2042200 for 1947.<sup>5</sup>Includes rabbit and other small animal feeds (except dog and cat food).<sup>6</sup>Estimate based on tonnage.<sup>7</sup>Includes miscellaneous feed materials not classified elsewhere, such as dried citrus pulp; also feed for birds, fish and other pets (except dog and cat food).<sup>8</sup>Includes cereal coffee substitute.

## MANUFACTURES—INDUSTRY STATISTICS

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Missouri.....	5,464				
Kansas.....	7,632				

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 20411, New Jersey, Pennsylvania, Iowa, North Dakota, South Dakota, Kentucky, Alabama, Idaho, Wyoming, Colorado, and Arizona; 20413, Iowa, Nebraska, and California; 20421, Maine, and South Dakota; 20422, New Hampshire, West Virginia, and Idaho; 20423, Maine, Massachusetts, Nebraska, South Carolina, Montana, and Utah; 20424, Vermont and Montana; 20430, Massachusetts, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Minnesota, Missouri, Nebraska, and Washington; 20450, Massachusetts, Connecticut, Indiana, Michigan, Iowa, Missouri, Nebraska, South Carolina, Alabama, Mississippi, Colorado, and Utah.

<sup>1</sup>Data for 1947 are available only for Industry 2042, Prepared Animal Feeds.<sup>2</sup>Included in "All other materials, etc.", code 970000.<sup>3</sup>"Materials, not specified by kind" as distinguished from "all other materials" could not be determined exactly for 1954 but is estimated at \$200 to \$250 million. The corresponding 1947 figure is \$102 million.

## GRAIN-MILL PRODUCTS

20D-17

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>Represents flour mills in which the primary product is blended and prepared flour.

<sup>3</sup>Represents establishments specializing in the production of blended and prepared flour from purchased flour (including flour transferred from other plants of the same company).

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Includes small amounts reported by industries 2043 and 2045 (added to the figures shown for industry 2041). Represents manufacturing establishment storage capacity for small grains other than rice, except capacity in Industry 2094, Corn Wet-Milling and the alcoholic beverage industries (Group 208).

## Bakery Products

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

CODE	TITLE
2051--	Bread and Related Products
2052--	Biscuit and Crackers

Statistics from the 1954 Census of Business are also included for the retail trade classification "Bakeries, with baking on premises," code 5462.

2051--Bread and Related Products (Full Standard Industrial Classification Title: Bread and Other Bakery Products, Except Biscuit, Crackers and Pretzels).

This industry comprises establishments primarily engaged in manufacturing bread, cakes, sweet yeast goods, hand-made cookies, doughnuts, pies, pastries, and similar perishable bakery products, for off-premise sale. Establishments primarily engaged in producing "dry" bakery products such as biscuit, crackers, and pretzels are classified in Industry 2052, Biscuit and Crackers. For a detailed list of the primary products of Industry 2051, refer to Table 6A, product codes 2051111 to 2051711.

For 1954, all establishments producing bakery products primarily for direct sale to consumers on the premises were classified in retail trade, Industry 5462, and not in Industry 2051. The definition followed in the 1947 Census differed slightly in that an establishment producing for sale on the premises was included in Industry 2051 if it was part of a chain of such bakeries, but excluded if it was a single-unit bakery. The 1947 statistics have not been revised to reflect this change in definition. Comparability between 1947 and 1954 is not significantly affected for Industry 2051, but the effect on the statistics for the subindustry, "Retail Multi-Outlet Bakeries," is greater. The apparent decreases in the sub-industry from 1947 to 1954 are believed to be due largely to this change in definition.

Subindustries: The Standard Industrial Classification does not provide for separate industry data for the different types of bakeries included in Industry 2051. In order to provide additional detail to reflect the differences among bakeries, i.e., interrelationships of value and type of bakery products shipped, materials used, value added by manufacture, employment, etc., Industry 2051 has been divided into 4 subindustries as follows:

Wholesale Bakeries: Bakeries selling chiefly at wholesale to other business concerns, including grocers, restaurants, hotels, institutions and other establishments buying the products for resale. The principal products of this group of establishments are bread, bread type rolls, and cakes. The values reported are the wholesale selling prices received by the manufacturer.

Grocery Chain Bakeries: Bakeries owned and operated by grocery chain store companies and distributing their product through retail grocery stores owned by the same company. The values reported by this group of establishments are based on a transfer price which is nearly equivalent to the wholesale price.

House-to-house Bakeries: Bakeries selling chiefly through retail house-to-house routes. The values were reported generally at the retail price, although in a few instances, transfers of goods between establishments of some of the larger companies were expressed in terms of wholesale prices.

Retail multi-outlet Bakeries: Retail bakeries selling chiefly through nonbaking outlets operated by the same company. Statistics relating to the retail outlets are not included, except in those cases where one retail unit was at the same location as the bakery and included as a part of the manufacturing establishment. Bakeries operated by restaurant chains are included in this subindustry. The value of products reported is largely based on the retail prices received for the product. However, some of the larger concerns reported a "transfer value," the nearest available equivalent to a wholesale price.

This subindustry as defined for 1947 included establishments of multiunit enterprises with baking on the premises at each location; such establishments were classified in Retail Trade (SIC 5462) for 1954. Thus the 1947 figures for "retail multi-outlet bakeries" are not closely comparable to the 1954 figures.

The value of shipments of Industry 2051, Bread and Related Products, in 1954 totaled \$3,067 million. This included shipments of primary products (bread and related products) valued at \$2,995 million, shipments of secondary products valued at \$54 million, and miscellaneous receipts (mainly sale of scrap and refuse) of \$18 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$278 million are excluded from the \$3,067 million value of shipments of Industry 2051. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but are included in other industry statistics, mainly employment and inventories.

Industry 2051 shipments of bread and related products in 1954 represented 98 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was also 98 percent. Secondary products shipped by this industry in 1954 consisted mainly of biscuit, cracker and pretzel products, \$37 million, and other food products such as potato chips and other food preparation, \$17 million.

Industry 2051 shipments of bread and related products in 1954 represented 99 percent of these products, valued at \$3,012 million, shipped by all manufacturing industries. In 1947, this coverage ratio was also 99 percent.

2052--Biscuit and Crackers (Full Standard Industrial Classification Title: Biscuit, Crackers and Pretzels).

This industry comprises establishments primarily engaged in manufacturing biscuit (except raised biscuit), crackers, sponge goods, dry sweet goods, machine-made cookies, pretzels, and similar "dry" bakery products, such as cracker meal, matzoth, sugar wafers and zwieback and rusk (machine-made). Establishments primarily engaged in producing "perishable" bakery products are classified in Industry 2051, Bread and Related Products. For a detailed list of the primary products of Industry 2052, refer to Table 6A, product codes 2052011 to 2052051.

The value of shipments of Industry 2052, Biscuit and Crackers, in 1954 totaled \$757 million. This included shipments of primary products (biscuit and crackers) valued at \$735 million, shipments of secondary products valued at \$21 million, and miscellaneous receipts of \$1 million. Receipts for merchandising (products bought and resold without further manufacture

or processing) valued at \$50 million are excluded from the \$757 million value of shipments of Industry 2052. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but are included in other detailed industry statistics, mainly employment and inventories.

Industry 2052 shipments of biscuit, crackers and pretzels in 1954 represented 97 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 96 percent. Secondary products shipped by this industry in 1954 consisted mainly of bread and related products, \$7 million, and dog and cat food and other food and confectionery products valued at \$14 million.

Industry 2052 shipments of primary products (biscuit, crackers and pretzels) in 1954 represented 93 percent of these products, valued at \$787 million, shipped by all industries. In 1947, this coverage ratio was also 93 percent. The principal other industry shipping biscuit, crackers, and pretzels in 1954 was Industry 2051, Bread and Related Products, \$38 million.

5462--Retail Bakeries (Bakery Products Stores) with Baking on Premises.

These are retail establishments primarily engaged in selling bakery products, such as bread, cakes, or pies, over the counter. Stores, with baking on the premises at each location, which are operated by multiunit organizations are also included in Retail Trade in 1954.

Data for retail bakeries with baking on the premises were collected in the 1954 Census of Business. The information contained in Tables 6B and 7B of this report for such establishments is based on a probability sample of all establishments in this classification. Sampling techniques used are described in "The Sample Survey of Retail Stores" (Bureau of the Census Technical Paper No. 1) available from the Superintendent of Documents, Government Printing Office, Washington 25, D. C., for 20 cents per copy. Approximately 75 percent of the establishments in the sample supplied some or all of the information required for these tabulations. Totals were derived by assuming that the experience of those establishments which did not report the requested information was the same as those which did report such data.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments in other industries.

## BAKERY PRODUCTS

20E-3

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments <sup>3</sup> (\$1,000)

NA Not Available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>Excludes 3,932 "bakery products stores" with no paid employees and with sales of \$59,668,000.

<sup>5</sup>Includes 73,440 employees reported by retail bakeries covered in the 1954 Census of Business. This figure represents the number of employees as of the week ended nearest November 15, 1954 rather than the average for the year.

<sup>6</sup>No comparable figures available for earlier years.

<sup>7</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>8</sup>Figures were obtained from a retabulation of 1939 Census reports classified in accordance with present industry definitions and, except for production workers, are comparable with the figures for 1947-1954.

<sup>9</sup>Estimated by applying to retabulated data on number and wages of production workers the following ratios, respectively, computed from published 1939 statistics: (1) Total number of employees to number of production workers in establishments classified as "Wholesale" and "Wholesale and Retail" and (2) Wages paid to all employees to wages paid to production workers in the same categories.

<sup>10</sup>Figures are for wage earners, including driver-salesmen, and are not comparable with later years. Analysis of a sample of 1939 returns indicates that somewhat over 40 percent of these wage earners were driver-salesmen.

## MANUFACTURES - INDUSTRY STATISTICS

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Disclosure of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2051 and 5462, Bakery Products (including Retail Bakeries): New England—Maine, 117 (1,000-2,499); New Hampshire, 79 (500-999); Vermont, 46 (500-999); West North Central—North Dakota, 73 (500-999); South Dakota, 94 (500-999); South Atlantic—Delaware, 33 (250-499); West South Central—Arkansas, 91 (1,000-2,499).

S.I.C. 2051, Bread and Related Products: East North Central—Wisconsin, 138 (5,398); West North Central—North Dakota, 28 (500-999); South Dakota, 41 (500-999); Nebraska, 49 (1,000-2,499); Kansas, 85 (1,000-2,499).

Bread and Related Products: Selling Chiefly at Wholesale to Other Business Concerns (Groceries, Restaurants, Hotels, Institutions, etc.): New England—New Hampshire, 23 (250-499); Vermont, 17 (250-499); West North Central—North Dakota, 27 (250-499); Nebraska, 47 (1,000-2,499); South Atlantic—District of Columbia, 17 (1,000-2,499); South Carolina, 29 (1,000-2,499); Mountain—New Mexico, 26 (250-499); Utah, 29 (500-999); Nevada, 11 (100-249).

Bread and Related Products, Grocery Chain Bakeries: New England—Maine, 2 (100-249); New Hampshire, 1 (1-19); Vermont, 1 (20-99); Rhode Island, 2 (250-499); Connecticut, 2 (250-499); East North Central—Indiana, 2 (250-499); Wisconsin, 5 (250-499); West North Central—Minnesota, 3 (250-499); Iowa, 1 (20-99); North Dakota, 1 (20-99); South Dakota, 1 (20-99); Nebraska, 2 (20-99); Kansas, 2 (20-99); South Atlantic—Maryland, 2 (250-499); District of Columbia, 2 (100-249); North Carolina, 2 (250-499); Georgia, 2 (250-499); Florida, 5 (250-499); East South Central—Kentucky, 3 (250-499); Tennessee, 3 (100-249); Mississippi, 1 (20-99); West South Central—Arkansas, 1 (20-99); Louisiana, 2 (20-99); Texas, 6 (250-499); West—Montana, 1 (1-19); Colorado, 2 (100-249); Arizona, 1 (20-99); Utah, 1 (20-99); Washington, 2 (100-249); Oregon, 1 (20-99).

Bread and Related Products, Selling Chiefly at Retail Through House-to-house Routes: New England—Maine, 2 (500-999); New Hampshire, 3 (100-249); Rhode Island, 2 (100-249); East North Central—Indiana, 9 (250-499); Wisconsin, 3 (250-499); West North Central—Minnesota, 2 (250-499); Missouri, 4 (1,141); Kansas, 4 (100-249); South—District of Columbia, 1 (250-499); Virginia, 2 (250-499); Georgia, 1 (100-249); Kentucky, 1 (20-99); Oklahoma, 1 (100-249); Texas, 1 (500-999); West—Colorado, 1 (1-19); New Mexico, 1 (20-99); Arizona, 1 (20-99); Washington, 5 (100-249); Oregon, 2 (100-249).

Bread and Related Products: Retail Multi-outlet Bakeries: New England—Maine, 1 (20-99); New Hampshire, 1 (1-19); Rhode Island, 3 (20-99); Connecticut, 10 (100-249); West North Central—Iowa, 3 (20-99); Missouri, 3 (20-99); South Dakota, 1 (1-19); Kansas, 2 (1-19); South—Maryland, 8 (250-499); District of Columbia, 1 (20-99); Virginia, 4 (20-99); North Carolina, 3 (20-99); South Carolina, 2 (20-99); Florida, 2 (20-99); Kentucky, 2 (20-99); Tennessee, 1 (20-99); Mississippi, 4 (20-99); Arkansas, 4 (20-99); Louisiana, 7 (250-499); Oklahoma, 5 (20-99); Mountain—Montana, 3 (20-99); Colorado, 6 (100-249); New Mexico, 1 (1-19); Arizona, 3 (20-99); Utah, 1 (20-99); Nevada, 1 (20-99); Pacific—Washington, 5 (250-499); Oregon, 4 (250-499).

S.I.C. 2052, Biscuit and Crackers: New England—Maine, 1 (20-99); Rhode Island, 1 (20-99); Connecticut, 2 (20-99); East North Central—Indiana, 6 (500-999); Wisconsin, 3 (500-999); West North Central—Iowa, 2 (250-499); North Dakota, 1 (100-249); South Dakota, 1 (250-499); Nebraska, 1 (500-999); Kansas, 2 (500-999); South Atlantic—Virginia, 1 (500-999); West Virginia, 1 (1-19); North Carolina, 4 (100-249); East South Central—Alabama, 4 (100-249); Mississippi, 2 (20-99); West South Central—Arkansas, 2 (100-249); Louisiana, 2 (100-249); Mountain—Colorado, 5 (500-999); Utah, 1 (100-249); Pacific—Washington, 8 (500-999); Oregon, 3 (500-999).

<sup>2</sup>This subindustry as defined for 1947 included establishments of multi-unit enterprises with baking on the premises at each location; such establishments were classified in retail trade (S.I.C. code 5462) for 1954. Therefore the 1947 figures for "retail multi-outlet bakeries" are not closely comparable to the 1954 figures.

Electric motors driven by energy generated at the establishment.....do....	...	...	...	...	...	1

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (See tables 5A and 5B.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. (See tables 5A and 5B.)

<sup>3</sup>Less than 500,000 kwh.

## BAKERY PRODUCTS

	1947..	540,222	519,950	19,835	437	96	557,805	519,950	37,855	93

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products (The primary products are listed in Tables 5B and 6A; the first 4 digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Excludes products of retail bakeries (S.I.C. 5462).

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between bakery products, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Bread and related products (S.I.C. 2051)					Biscuit and crackers (S.I.C. 2052)	Other industries <sup>1</sup>	All industries <sup>1</sup>

<sup>1</sup>Comparable statistics for all commercial bakeries, including retail bakeries, are shown in Table 6B below.

<sup>2</sup>This subindustry as defined for 1947 included establishments of multi-unit enterprises with baking on the premises at each location; such establishments were classified in retail trade (S.I.C. code 5462) for 1954. Therefore the 1947 figures for "retail multi-outlet bakeries" are not closely comparable to the 1954 figures.

Table 6B.—QUANTITY AND VALUE OF BAKERY PRODUCTS SOLD BY MANUFACTURING AND RETAIL BAKERIES, 1954 AND 1939

Product code	Product	Unit of quantity	1954						1939 <sup>3</sup> total	
			Total <sup>1</sup>		Made in manufacturing bakeries (S.I.C. 2051) <sup>2</sup>		Made in retail bakeries, with baking on premises (S.I.C. 5462)

xxx Not applicable.

<sup>1</sup>Represents total commercial production, except for production in bakeries with no paid employees (family enterprises). In 1954, there were 3,932 "bakery products stores" with no paid employees represented in the Census of Business, with sales of \$59,668 thousand. "Value" represents factory value for wholesale bakeries, retail value for retail bakeries.

<sup>2</sup>Including small amounts made in other manufacturing industries (principally the Biscuit and Cracker Industry, S.I.C. 2052).

<sup>3</sup>Represents total commercial production except for production in bakeries with annual sales of less than \$5 thousand.

## MANUFACTURES - INDUSTRY STATISTICS

Table 6C.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

209911	Frozen eggs.....			9,944					9,139		
970000	All other materials, ingredients, etc.....										
971000	Materials, ingredients, etc., not specified by kind.....			xxx					xxx		

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Includes consumption by multi-unit enterprises with baking on the premises at each location, which were classified in retail trade in 1954. For this reason, the 1947 data for retail multi-outlet bakeries are not directly comparable to 1954 (see introductory text).

<sup>2</sup> The amounts "not specified by kind" as distinguished from "all other materials" could not be determined exactly for 1954, but were approximately the following: Industry 2051, total - 10-15%; Wholesale Bakeries, 10-15%; Grocery Chain Bakeries, 1-5%; House-to-House Bakeries, 5-10%; Retail Multi-Outlet Bakeries, 15-20%; and Industry 2052, 1-5%. The percentages are applicable to the total cost of materials, etc., on the first line of the table.

<sup>3</sup>Comparable statistics for all commercial bakeries, including retail bakeries, are shown in Table 7B below.

## BAKERY PRODUCTS

20E-19

Table 7B.—SELECTED INGREDIENTS USED BY MANUFACTURING AND RETAIL BAKERIES: 1954 AND 1939

Ingredient code	Ingredient	1954						1939 <sup>2</sup> total

	Other ingredients and supplies.....	xxx	787,498	xxx	<sup>3</sup> 683,627	xxx	103,871	xxx	<sup>3</sup> 254,889

xxx Not applicable.

<sup>1</sup>Represents total consumption in commercial bakeries, except biscuit and cracker bakeries, and except for consumption in bakeries with no paid employees (family enterprises). (See footnote 1 to Table 6B.)<sup>2</sup>Represents total consumption in commercial bakeries, except biscuit and cracker bakeries, and except for consumption in bakeries with annual sales of less than \$5 thousand.<sup>3</sup>Including containers. For 1939, cost of containers was \$62,138 thousand.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

	Establishments with:									
20517	90% or more specialization.....	5	21	49	21	31	40	98	109	208

<sup>1</sup>This class includes data for establishments with less than 50% specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

## Sugar, Confectionery, and Related Products

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

<u>Code</u>	<u>Title</u>
2061	Raw Cane Sugar
2062	Cane-Sugar Refining
2063	Beet Sugar
2071	Confectionery Products
2072	Chocolate And Cocoa Products
2073	Chewing Gum

Sugar excise taxes are not included in the cost of materials, value of shipments, or value added by manufacture for the sugar producing industries (2061, 2062 and 2063).

2061—Raw Cane Sugar (Full Standard Industrial Classification title: Cane Sugar (Except Refining))

Industry 2061, Raw Cane Sugar, comprises establishments primarily engaged in manufacturing raw sugar, sirup, or finished (granulated or clarified) cane sugar from sugar cane. Establishments primarily engaged in refining sugar from purchased raw cane sugar and sugar sirup are classified in Industry 2062, Cane Sugar Refining, and corn sirup in Industry 2094, Corn products. For a detailed list of products of Industry 2061, refer to Table 6A, product codes 2061211 to 2061298.

The value of shipments of Industry 2061 in 1954 totaled \$65 million. This included shipments of raw cane sugar and other cane sugar mill products (primary products) valued at \$62 million, and shipments of other products and miscellaneous receipts valued at \$3 million.

Industry 2061 shipments of raw cane sugar and sugar mill products (primary products) in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, the percentage was 97. Industry 2061 accounted for 97 percent of the raw cane sugar and cane sugar mill products shipped by United States producers in 1954.

Sugar cane grown on plantations during the first nine months of the year is usually harvested and processed during the last three. In some instances the processing carries over to the early months of the following year. Establishments in Industry 2061 reported on the basis of the 1954 crop year rather than the calendar year where the two did not coincide, except for employment and payroll data which were reported for the calendar year in all cases.

### 2062—Cane-Sugar Refining

Industry 2062, Cane Sugar Refining, comprises establishments primarily engaged in refining purchased raw cane sugar and liquid sugar. Establishments primarily engaged in manufacturing flavoring sirups or extracts are classified in Industry 2095, Flavorings. For a detailed list of products of Industry 2062 refer to Table 6A, product codes 2062111 to 2062251.

The value of shipments of Industry 2062 in 1954 totaled \$864 million. This included shipments of refined cane sugar and other cane-sugar refinery products (primary products) valued at \$861 million, and shipments of other products (secondary products) and miscellaneous receipts of \$3 million. Negligible amounts of cane-sugar refinery products were shipped by other industries.

Industry 2062 is largely dependent for its raw material on imports from foreign countries and shipments from Hawaii and

Puerto Rico. Only about 6 percent of its total supply comes from mainland sugar mills (Industry 2061).

### 2063—Beet Sugar

Industry 2063, Beet Sugar, comprises establishments primarily engaged in the manufacture of beet sugar from sugar beets. For a detailed list of products of Industry 2063, refer to Table 6A, product codes 2063111 to 2063298.

The value of shipments of Industry 2063 in 1954 totaled \$291 million, which consisted almost entirely of beet sugar and other beet sugar factory products (primary products). No other industries produced beet sugar.

Beet sugar production is highly seasonal, with the processing of sugar beets starting in the late summer and generally running into the early months of the following year. Establishments in this industry reported for the 1954 crop year rather than the calendar year where the two did not coincide, but employment and payroll data were always reported for the calendar year.

2071—Confectionery Products (Full Standard Industrial Classification title: Candy and Other Confectionery Products)

Industry 2071, Confectionery Products, comprises establishments primarily engaged in manufacturing candy and other confections such as chocolate candies (fancy-package, bulk, or count), chocolate covered bars, marshmallows, lozenges, fudge, candied and crystallized fruits, candy-covered nuts, salted nuts, stuffed dates, popcorn balls, and related products. Establishments primarily engaged in manufacturing solid chocolate bars are classified in Industry 2072, Chocolate and cocoa products; chewing gum in Industry 2073; Chewing Gum, and cough drops selling at retail for more than 10 cents in Industry 2834, Pharmaceutical Preparations. Establishments primarily manufacturing confectionery for sale at retail on the same premises, and establishments primarily engaged in shelling and roasting nuts are included in trade industries. For a detailed list of products of Industry 2071, refer to Table 6A, product codes 2071111 to 2071698.

The value of shipments of Industry 2071 in 1954 totaled \$993 million. This included shipments of confectionery products (primary products) valued at \$940 million, shipments of other products (secondary products) valued at \$44 million, and miscellaneous receipts of \$9 million.

Industry 2071 shipments of confectionery products (primary products) in 1954 represented 95 percent of its total product shipments (primary and secondary). In 1947 this ratio was 97 percent.

Industry 2071 shipments of confectionery products (primary products) in 1954 represented 96 percent of the confectionery products valued at \$983 million shipped by all manufacturing industries. This ratio in 1947 was 97 percent.

### 2072—Chocolate and Cocoa Products

Industry 2072, Chocolate And Cocoa Products, comprises establishments primarily engaged in manufacturing chocolate and cocoa butter from cocoa beans, and in the further manufacture of cocoa, solid chocolate bars, and chocolate coatings. Important products of this industry include solid chocolate, chocolate coatings, powdered cocoa, and cocoa butter. Establishments primarily engaged in manufacturing chocolate candies from purchased chocolate are classified in Industry 2071, Confectionery Products; and instant chocolate and cocoa from purchased chocolate and cocoa in Industry 2099, Food Preparations, N.E.C. For a detailed list of products of Industry 2072, refer to Table 6A, product codes 2072111 to 2072298. 20F-1

The value of shipments of Industry 2072 in 1954 totaled \$433 million.

This included shipments of chocolate and cocoa products (primary products) valued at \$422 million, shipments of other products (secondary products) valued at \$10 million, and miscellaneous receipts of \$1 million. Industry 2072 shipments of chocolate and cocoa products (primary products) in 1954 represented 98 percent of its total product shipments (primary and secondary). In 1947 this ratio was 99 percent.

Industry 2072 shipments of chocolate and cocoa products (primary products) in 1954 represented 89 percent of the chocolate and cocoa products valued at \$472 million shipped by all manufacturing industries. This ratio in 1947 was 100 percent. The chocolate and cocoa products made in other industries (valued at \$50 million in 1954) consisted almost entirely of products made from chocolate or cocoa purchased from Industry 2072 plants; the \$472 million value of shipments thus contains some duplication due to this reprocessing of chocolate and cocoa. The decrease in the "coverage ratio" (100 percent in 1947 to 89 percent in 1954) is due partly to an increase in the reprocessing of chocolate and cocoa, and partly to a change in definition (some of the products, such as reprocessed chocolate sirup, were not classified as primary to Industry 2072 in 1947).

#### 2073--Chewing Gum

Industry 2073, Chewing Gum, comprises establishments primarily engaged in the manufacture of non-medicated chewing gum and chewing gum base. Establishments primarily engaged in the manufacture of gum pharmaceutical preparations (medicated chewing gum) are classified in Industry 2834, Pharmaceutical Preparations.

The value of shipments of Industry 2073 in 1954 totaled \$158 million. This included shipments of chewing gum and chewing gum base (primary products) valued at \$150 million, and shipments of secondary products and miscellaneous receipts valued at \$8 million. Industry 2073 shipments of chewing gum and chewing gum base (primary products) in 1954 represented 95 percent of its total product shipments (primary and secondary).

Industry 2073 shipments of chewing gum and chewing gum base (primary products) in 1954 represented 98 percent of the chewing gum and chewing gum base, valued at \$153 million, shipped by all industries. The principal industry manufacturing chewing gum, other than Industry 2073, was the confectionery products industry (2071).

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## SUGAR; CONFECTIONERY AND RELATED PRODUCTS

20F-3

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Industry and census year	Establish- ments, number	All employees		Production workers		Value added by manufacture <sup>2</sup>	Cost of materials, etc. <sup>3</sup>	Value of shipments <sup>4</sup>
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Raw cane sugar <sup>5</sup> (S.I.C. 2061):								
1954.....	49	3,078	8,949	2,719	7,307	15,431	49,156	64,588

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ending nearest the 15th of March, May, August and November. (However, in the case of the "Raw cane sugar," "Refined cane sugar" and "Beet sugar" industries a different method was used for 1954; all employees represents the average of 12 monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November.) For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the all employees figure represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Raw cane sugar," "Refined cane sugar" and "Beet sugar" industries 1947 value added by manufacture does not equal the published value of products shipped less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of products shipped. Since the 1949-1952 figures are estimates derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Excise taxes are not included in cost of materials or value of products for the sugar industries. Previously published figures for these industries for 1935, 1937 and 1939 have been adjusted to exclude estimated excise tax.

<sup>4</sup>For 1929 and 1947-1954, value of shipments, except in the case of the sugar industries for 1929 where they represent value of production; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1947-1954 generally cover the calendar year except that some producers reported for the seasons beginning in the respective years. (See text on industry.) The figures for 1931-1939 cover the seasons beginning in the respective census years, and for prior years for the seasons ending in those years. Thus the figures given for 1939 cover the season 1939-40, whereas, the figures for 1921 apply to the season 1920-21. In 1925, 1927 and 1929, however, most of the establishments in "Raw cane sugar" and a few establishments in "Beet sugar," reported for the seasons 1925-26, 1927-28, and 1929-30, instead of 1924-25, 1926-27, and 1928-29.

<sup>6</sup>No comparable figures are available for earlier years. Prior to 1909, "Raw cane sugar" and "Cane sugar refining" constituted a single industry.

<sup>7</sup>The figures for 1949-1954 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>8</sup>"Confectionery products" and "Chewing gum" formerly were combined in one industry. Separate statistics for each are therefore not available for years prior to 1914.

## SUGAR, CONFECTIONERY AND RELATED PRODUCTS

20F-5

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> D Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2061, Raw Cane Sugar: South—Florida, 3 (500-999); Louisiana, 46 (1,000-2,499).

S.I.C. 2062, Cane-sugar Refining: Northeast—Massachusetts, 2 (1,000-2,499); Pennsylvania, 2 (1,000-2,499); North Central—Indiana, 1 (20-99); Illinois, 1 (20-99); Missouri, 1 (20-99); South and West—Maryland, 1 (1,000-2,499); Georgia, 1 (500-999); Louisiana, 7 (2,500-4,999); Texas, 1 (500-999); California, 1 (1,000-2,499).

S.I.C. 2063, Beet Sugar: North Central—Ohio, 2 (250-499); Michigan, 5 (500-999); Minnesota, 3 (250-499); Iowa, 1 (100-249); South Dakota, 1 (100-249); Nebraska, 5 (500-999); Kansas, 1 (100-249); West—Idaho, 5 (500-999); Wyoming, 3 (250-499); Washington, 2 (250-499); Oregon, 1 (250-499).

S.I.C. 2071, Confectionery Products: New England—New Hampshire, 2 (1-19); Rhode Island, 3 (250-499); Connecticut, 10 (250-499); East North Central—Ohio, 100 (1,000-2,499); Michigan, 33 (500-999); Wisconsin, 31 (1,000-2,499); West North Central—South Dakota, 1 (100-249); Nebraska, 4 (250-499); South and West—Delaware, 1 (1-19); District of Columbia, 1 (1-19); West Virginia, 9 (20-99); Tennessee, 24 (500-999); Mississippi, 5 (20-99); Montana, 1 (1-19); Idaho, 3 (20-99); New Mexico, 2 (1-19); Washington, 21 (500-999); Oregon, 15 (100-249).

S.I.C. 2072, Chocolate and Cocoa Products: Northeast and North Central—Massachusetts, 3 (1,056); New Jersey, 5 (100-249); Illinois, 3 (250-499); Wisconsin, 2 (250-499); Pacific—Washington, 1 (1-19); California, 3 (100-249).

S.I.C. 2073, Chewing Gum: Northeast and North Central—Massachusetts, 3 (100-249); New Jersey, 2 (20-99); Ohio, 2 (20-99); Illinois, 2 (1,000-2,499); Michigan, 1 (1-19); South and West—Tennessee, 2 (100-249); Pacific—California, 3 (20-99).

## SUGAR; CONFECTIONERY AND RELATED PRODUCTS

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than 500 thousand kwh. <sup>5</sup>Less than \$500 thousand.

## MANUFACTURES--INDUSTRY STATISTICS

Table 4.--SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Miscellaneous receipts included with secondary products.

## SUGAR; CONFECTIONERY AND RELATED PRODUCTS

20F-9

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

NA Not available.

<sup>1</sup>Sugar production figures differ slightly from data published by the Department of Agriculture largely because, (1) some establishments submitted Census reports on a fiscal year basis; (2) the inclusive Census data of some refined cane sugar produced at cane sugar mills, and excluded from the Department of Agriculture figures; (3) the exclusion from Census data of raw cane sugar produced at establishment classified as forms for Census purposes, and (4) the exclusion from Census data of establishment operated by State governments (see general explanations).

<sup>2</sup>Includes only sirup made in raw sugar and commercial sirup mills. Farm sirup mills were considered to be outside the scope of the Census.

<sup>3</sup>Excludes liquid sugar and sugar sirups produced by confectionery and beverage base manufactures for their own use.

<sup>4</sup>Filtered blackstrap included with refiners blackstrap and barrel sirup.

<sup>5</sup>Liquid beet sugar and edible beet sirup and molasses are included with "Other beet sugar factory products and byproducts." Value understated because of inclusion of a substantial amount of interplant transfers at nominal values.

<sup>6</sup>Quantity for 1947 taken from reports of the Bureau of Agricultural Economics, U. S. Department of Agriculture. Quantities were not uniformly reported to the Census Bureau.

<sup>7</sup>Does not include confectionery type solid chocolate (solid chocolate bars and other molded chocolate confections) shown under product codes 2072231, 2072241, and 2072245.

<sup>8</sup>Includes small quantities not specified by kind or retail price class.

<sup>9</sup>Includes 245,085 thousand pounds of confectionery type solid chocolate products valued at \$108,707,000.

<sup>10</sup>Sweetened chocolate for baking, cooking, etc. (code 2072221) included with dark chocolate (code 2072231).

<sup>11</sup>Figures for 1947 represent the output of plants classified in Industry 2072, Chocolate and cocoa products.

## SUGAR; CONFECTIONERY AND RELATED PRODUCTS

20F-13

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

## SUGAR; CONFECTIONERY AND RELATED PRODUCTS

20F-15

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

To consumers from factory (including mail).....	6,198	1	5,998	1	200	(Z)
Direct export shipments.....	4,612	(Z)	3,136	(Z)	1,476	1

NA Not available.

Z Less than 0.5 percent.

<sup>1</sup>Represents sales through 1,540 retail stores or outlets.<sup>2</sup>Includes companies with 2 or 3 stores.

## Beverages

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

<u>Code</u>	<u>Title</u>
2081--	Bottled Soft Drinks
2082--	Beer and Ale
2083--	Malt
2084--	Wines and Brandy
2085--	Distilled Liquor

Shipments of each of these industries 1954-1947 consisted almost entirely of the primary products of each of the particular industries with only negligible amounts of these products produced in other industries. Because of the nearly 100 percent primary product specialization and coverage for each of the five industries included in this report there is an unusually close relationship between the industry data shown in Tables 1-4 and the product statistics shown in Table 6A.

2081--Bottled Soft Drinks (Full Standard Industrial Classification Title: Bottled Soft Drinks and Carbonated Waters)

This industry comprises establishments primarily engaged in manufacturing bottled or canned soft drinks (nonalcoholic beverages) and carbonated waters. Establishments primarily engaged in manufacturing fruit and vegetable juices are classified in Industry 2033, Canned Fruits and Vegetables; fruit sirups for flavoring in Industry 2095, Flavorings; and cider in Industry 2099, Food Preparations, N.E.C. Establishments primarily engaged in bottling natural spring waters are classified in Trade industries.

For a detailed list of primary products of Industry 2081, refer to Table 6A, product codes 2081010 to 2081098.

The value of shipments of Industry 2081, Bottled Soft Drinks, in 1954 totaled \$1113 million. This included shipments of primary products (bottled soft drinks) valued at \$1087 million, shipments of secondary products valued at \$18 million, and miscellaneous receipts of \$8 million. Excluded from these totals are \$76 million of products bought and resold without further processing (merchandising). Data relating to merchandising receipts are also excluded from the cost of materials and value added; however, the merchandising activity is reflected in other industry statistics, principally payrolls and inventories.

For the most part, the value of shipments figures for Industry 2081 represent delivered value rather than value f.o.b. plant, since most of the manufacturers operate their own delivery service. This fact is reflected in the large number of "other workers," which includes delivery personnel, in relation to the total number of employees, as shown in Tables 1-3.

2082--Beer and Ale (Full Standard Industrial Classification Title: Malt Liquors)

This industry comprises establishments primarily engaged in manufacturing all kinds of malt liquors such as ale, beer, porter, stout, and malt extract. Establishments primarily engaged in bottling purchased malt liquors are classified in trade industries.

For a detailed list of primary products of Industry 2082, refer to Table 6A, product codes 2082111 to 2082255.

The value of shipments of Industry 2082, Beer and Ale in 1954 totaled \$1857 million. This included shipments of primary products (beer and ale, and brewery byproducts) valued at \$1851 million, shipments of secondary products valued at \$4 million, and miscellaneous receipts of \$2 million.

### 2083--Malt

This industry comprises establishments primarily engaged in manufacturing malt or malt byproducts, such as malt sprouts, screening, chaff, and skimmings, from barley or other grains.

For a detailed list of primary products of this industry, refer to Table 6A, product codes 2083111 to 2083211.

The value of shipments of Industry 2083, Malt, in 1954 totaled \$202 million. This included shipments of primary products (malt and malt byproducts) valued at \$193 million, and miscellaneous receipts of \$9 million.

2084--Wines and Brandy (Full Standard Industrial Classification Title: Wines, Brandy, and Brandy Spirits)

This industry comprises establishments primarily engaged in manufacturing wines, brandy, and brandy spirits. Bonded storerooms which engaged in blending wines are also included in this industry. Establishments primarily bottling purchased wines, brandy and brandy spirits but which do not manufacture or blend wines and brandy are classified in trade industries.

For a detailed list of primary products of Industry 2084, refer to Table 6A, product codes 2084011 to 2084071, 2084X11, and 2084X31.

The value of shipments and cost of materials data for Industry 2084 contain a considerable amount of duplication, which arises from the transfer of wine between establishments within the industry. Both finished and unfinished wines are shipped from wineries "in bond" to establishments which age, blend, clarify, bottle or otherwise process the product, pay the Federal tax and ship the finished wine to dealers. The quantity and value of a given lot of wine may therefore be reported in the census by two or more establishments, first in bond and later as tax-paid.

Manufacturers and others processing wines and brandy are licensed by the Bureau of Internal Revenue as wineries, fruit distilleries, bonded wine storerooms, bonded field warehouses, and rectifying plants. Frequently, however, two or more licensed premises are under the same ownership at the same location, and were counted in the census as one establishment. A substantial number of the establishments holding licenses were located on farms, had no employees, were primarily engaged in nonmanufacturing activities, or for other reasons were outside the scope of the Census of Manufactures. Consequently, the number of licensed premises shown in the annual reports of the Commissioner of Internal Revenue is considerably larger than the number of establishments shown in this report. Comparison with Bureau of Internal Revenue production figures indicates that establishments not included in the Census of Manufactures accounted for a substantial proportion of the total output of wines and brandies.

2085--Distilled Liquor (Full Standard Industrial Classification Title: Distilled, Rectified, and Blended Liquors)

This industry comprises establishments primarily engaged in manufacturing alcoholic liquors by distillation and rectification, and in manufacturing cordials and alcoholic cocktails by blending processes, or by mixing liquors and other ingredients. Important products of this industry include grain alcohol (neutral spirits), straight and blended whiskies, rum, gin, cordials, liqueurs, and prepared alcoholic cocktails. Establishments primarily engaged in manufacturing industrial alcohol are classified in Industry 2829, Organic Chemicals, N.E.C., and those only bottling purchased liquors in Trade industries.

For a detailed list of primary products of Industry 2085, refer to Table 6A, product codes 2085111 to 2085381.

The value of shipments of Industry 2085, Distilled Liquor, Except Brandy, in 1954 totaled \$711 million. This included shipments of primary products (distillery products and bottled liquors) valued at \$683 million, shipments of secondary products valued at \$8 million, and miscellaneous receipts of \$21 million. Excluded from these totals are \$43 million of products bought and resold without further processing (merchandising). Data relating to merchandising receipts are also excluded from cost of materials and value added; however, this activity is reflected in other industry statistics, principally payrolls and inventories.

Manufacturers and bottlers of alcoholic beverages are licensed by the Bureau of Internal Revenue as registered distillers, tax paid bottling houses, rectifying plants, and bonded warehouses. Frequently two or more of the premises licensed by the Bureau of Internal Revenue are under the same owner-

ship at the same location, and are counted in the Census of Manufactures as one establishment. Other establishments licensed by the Bureau of Internal Revenue are primarily engaged in nonmanufacturing activities and are, therefore, classified in Trade industries. For these reasons, the number of licensed premises shown in the annual reports of the Commissioner of Internal Revenue is considerably larger than the number of establishments classified in this industry in the Census of Manufactures. Comparison with Bureau of Internal Revenue production figures indicates, however, that establishments included in the Census of Manufactures accounted for a very high proportion of the total output of distilled liquors.

There is some duplication in the value of shipments and cost of materials figures for Industry 2085. Some of the products of distillers (chiefly spirits) are used, in the same year in which produced, as raw materials of rectifying and bottling plants and therefore are included in the value of shipments more than once.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. (However, in the case of the "Wines and brandy" industry and the "Distilled liquors, except brandy" industry, a different method was used for 1954: All employees represents the average of 12 monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).)

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Malt" industry, 1947 value added by manufacture does not equal the published value of products shipped less cost of materials etc., because an estimated value of production was used in the calculation in place of value of products shipped. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>For 1929, 1947 and 1954 value of shipments, except in the case of "Distilled liquors, except brandy, in 1947 where they represent value of production; for all other years, value of production. Value figures do not include Federal or State excise taxes, except as noted in footnote 8. See Introduction, "Value of Shipments."

<sup>4</sup>Add standard footnote on "very small plants may have been misclassified."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>For "Bottled soft drinks" and "Malt liquors," the comparability of the figures for "All employees" and "Production workers" is affected by the fact that for 1939-1954 manufactures were asked to report the total number of employees on the payrolls, including truck drivers engaged in distribution, whereas in earlier years they were asked to report employees engaged, directly or indirectly in manufacturing activities.

<sup>7</sup>Data for establishments primarily engaged in making "near beer" are included in the figures for "Malt liquors" for 1899-1921 and 1947-1954 and in the figures for "Bottled soft drinks" for 1923-1939. In 1921 the output of the former industry consisted almost entirely of "near beer."

<sup>8</sup>Data for establishments primarily engaged in production of grape juice are included in the figures for 1899-1933 but not for later years.

<sup>9</sup>For "Malt liquors," the figures for 1933-1954 but not for earlier years, include data for establishments primarily engaged in the manufacture of malt extracts and syrup.

<sup>10</sup>Data for malt houses operated by breweries are included in the figures for "Malt liquors" for 1899-1933 and in the figures for "Malt" for 1935-1954.

<sup>11</sup>For "Malt liquors," the figures for 1899-1909 and 1919-1921 include Internal Revenue taxes, whereas the figures for other years do not include these taxes.

<sup>12</sup>1914 was the last normal pre-prohibition year covered by the census.

<sup>13</sup>The figures for 1914 do not include Internal Revenue taxes amounting to \$62.1 million.

<sup>14</sup>Value of products shipped and cost of materials, etc., are omitted for this industry because each of these measures contains extensive duplication. The duplication arises because the products of some establishments are used as materials by other establishments classified in the same industry. (See text on industry).

<sup>15</sup>The statistics previously published for 1939 which do not cover the bottling of unrectified liquors, are not sufficiently comparable to the statistics for other years to be shown in this table.

<sup>16</sup>Since the rectifying and blending of distilled liquors was first canvassed in 1935, the figures for prior years, which cover only the production of distilled liquors, are not sufficiently comparable to those for later years to be shown in this table.

## MANUFACTURES--INDUSTRY STATISTICS

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2081, Bottled Soft Drinks: New England—Maine, 44 (250-499); Rhode Island, 37 (500-999); East North Central—Indiana, 136 (2,500-4,999); Wisconsin, 150 (1,000-2,499); West North Central—Minnesota, 86 (1,383); Iowa, 87 (1,000-2,499); Kansas, 78 (500-999); South Atlantic—Delaware, 13 (100-249); District of Columbia, 8 (500-999); West Virginia, 81 (1,000-2,499); North Carolina, 144 (2,500-4,999); South Carolina, 87 (1,000-2,499); Georgia, 148 (2,500-4,999); East South Central—Kentucky, 93 (1,000-2,499); Tennessee, 99 (1,000-2,499); West South Central—Louisiana, 78 (2,500-4,999); Oklahoma, 100 (1,000-2,499); West—Idaho, 24 (250-499); Wyoming, 15 (100-249); Colorado, 56 (500-999); Arizona, 31 (250-499); Utah, 24 (250-499); Nevada, 9 (100-249); Oregon, 48 (250-499).

S.I.C. 2082, Beer and Ale: New England—Rhode Island, 2 (500-999); Connecticut, 2 (100-249); South Atlantic—Delaware, 1 (1-19); District of Columbia, 1 (100-249); Virginia, 3 (100-249); West Virginia, 1 (20-99); North Carolina, 1 (20-99); Georgia, 1 (20-99); Florida, 7 (500-999); East South Central—Kentucky, 5 (1,000-2,499); Tennessee, 1 (20-99); West South Central—Oklahoma, 1 (20-99); Texas, 6 (1,000-2,499); Mountain—Idaho, 2 (20-99); Wyoming, 1 (1-19); Arizona, 1 (100-249); Utah, 2 (100-249); Nevada, 1 (20-99); Pacific—Washington, 8 (1,000-2,499); Oregon, 1 (100-249).

S.I.C. 2083, Malt: Middle Atlantic—New York, 6 (100-249); New Jersey, 1 (20-99); East North Central—Ohio, 1 (20-99); Illinois, 5 (250-499); Michigan, 1 (20-99); West North Central—Minnesota, 11 (250-499); Missouri, 1 (20-99); Pacific—Washington, 1 (20-99); California, 2 (20-99).

S.I.C. 2084, Wines and Brandy: Northeast—Massachusetts, 1 (20-99); New York, 43 (1,000-2,499); New Jersey, 10 (250-499); North Central—Ohio, 18 (100-249); Indiana, 1 (1-19); Illinois, 1 (20-99); Wisconsin, 1 (1-19); Missouri, 3 (20-99); South—Maryland, 1 (100-249); Virginia, 2 (20-99); North Carolina, 1 (1-19); South Carolina, 1 (1-19); Georgia, 1 (20-99); Florida, 2 (1-19); Oklahoma, 1 (1-19); Texas, 1 (1-19); West—Colorado, 1 (1-19); Washington, 8 (100-249); Oregon, 3 (20-99).

S.I.C. 2085, Distilled Liquors: Northeast—Maine, 1 (1-19); Massachusetts, 7 (500-999); Connecticut, 7 (100-249); North Central—Ohio, 5 (500-999); Michigan, 5 (100-249); Iowa, 1 (100-249); Missouri, 2 (20-99); Kansas, 1 (20-99); South—Maryland, 8 (1,000-2,499); Virginia, 1 (20-99); Kentucky, 45 (7,955); Tennessee, 1 (250-499); Louisiana, 1 (1-19); Pacific—Washington, 1 (1-19); California, 11 (250-499).

<sup>2</sup>Omitted because of duplication in cost of materials and value of shipments (see introductory text for industry).

## MANUFACTURES--INDUSTRY STATISTICS

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954

(For explanation of line captions see Introduction)

Expenditures for used plant and equipment.....do..	2,576	1,789	( <sup>3</sup> )	( <sup>3</sup> )	1,147
Horsepower rating of power equipment at end of 1954:					
Horsepower of prime movers and electric motors driven by purchased energy, total.....1,000 hp..	148	446	83	38	134,226
Engines, etc. driving electric generators.....do..	3	122	14	( <sup>6</sup> )	21,640
Engines, etc. not driving electric generators.....do..	5	52	2	2	18,807
Electric motors driven by purchased energy.....do..	140	272	67	36	93,779
Electric motors driven by energy generated at the establishment.....do..	( <sup>6</sup> )	64,034	19	...	23,715

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>Not shown because of significant duplication in value of shipments and cost of material within the industry. (See introductory text.) <sup>3</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>4</sup>Less than 500 tons. <sup>5</sup>Less than \$500 thousand. <sup>6</sup>Less than 500 hp.

## BEVERAGES

## MANUFACTURES--INDUSTRY STATISTICS

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries". Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

Prod. class code	Bottled soft drinks industry	Bottled soft drinks (S.I.C. 2081)	Other industries	All industries	Prod. class code	Malt industry	Malt (S.I.C. 2083)	Other industries	All industries

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5A and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)<sup>2</sup>The coverage ratio measures the extent to which the products primary to the given industry are shipped by establishments classified in that industry.<sup>3</sup>The value of shipments is not shown because of significant duplication of such shipments within the industry. (See introductory text.) The specialization ratios on an unduplicated basis are estimated as more than 90 percent.<sup>4</sup>Percentages are based on figures containing significant duplication; however, coverage ratios based on estimated unduplicated totals would approximate these percentages.

Table 6A.--QUANTITY AND VALUE OF PRODUCTS SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, FOR THE UNITED STATES: 1954 AND 1947

NA Not available.

<sup>1</sup>In the product code numbering system used to identify soft drinks, the sixth digit identifies the type and size of container and the seventh digit identifies the flavor. (X) indicates that the container type and size or the flavor was not reported and (-) indicates a summation of the container types and sizes or flavors as specified in the table stub titles.

<sup>2</sup>Includes a computed number of cases for soft drinks sold in bulk (product code 20810EX) of 2,207 cases, arrived at by assuming 1.5 gallons equal to one case.

<sup>3</sup>Number of cases estimated by applying average unit price per case of all bottle sizes and flavors reported to the value reported.

<sup>4</sup>Includes a small number of 64 oz. bottles sold 6 to a case.

<sup>5</sup>Includes an indeterminate amount of non-dairy drinks other than orange.

<sup>6</sup>Includes small quantities reported by flavor but not by size of bottle. The cases and values reported by flavor are included under the flavor reported on the lines showing all bottle sizes by flavor (product codes 20810-0 to 20810-9).

<sup>7</sup>Over 9% barley malt; rye and wheat malt combined to avoid disclosure of figures for individual companies.

<sup>8</sup>Both the 1954 and 1947 figures contain extensive duplication arising because the products of some establishments are used as materials in other establishments in the same industry. The extent of duplication for 1954 is indicated in the columns showing the quantity and value of purchaser and transfers from other establishments of the same company.

<sup>9</sup>Includes a small amount of distillers grains, not specified by kind.

## MANUFACTURES--INDUSTRY STATISTICS

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954,  
AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Product class, region, and State <sup>1</sup>	Value of shipments	Product class, region, and State <sup>1</sup>	Value of shipments

<sup>1</sup>Sugar (code 206011) consumed by Industry 2081, Bottled Soft Drinks, amounted to 8,837,861 cwt. valued at \$82,643,000 in 1954 (not including the sugar content of purchased flavoring sirups). Data on flavoring sirups consumed were collected from soft drink bottlers for 1954, but did not meet publication standards.

## MANUFACTURES--INDUSTRY STATISTICS

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or prod- uct class No.	Industry or product class by percent of specialization	Estab- lish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2085	DISTILLED LIQUOR (entire industry).....	133	21,505	89,367	17,117	32,892	65,504	356,741	354,571	711,313
	Establishments with:									
	90% or more specialization.....	124	20,827	86,181	16,664	32,003	63,977	348,435	345,310	693,746
	75-89% specialization.....	4	474	2,459	340	698	1,211	7,143	6,574	13,717
20851	Distilled liquor except brandy:									
	All establishments specializing in product class	36	2,507	10,106	2,026	4,199	7,270	19,995	35,682	55,678

Amusements-theaters, ball parks, bowling alleys, etc.....	25,916	23,872	3
Roadside stands and other outlets selling primarily for on-premise consumption	62,994	57,438	7

<sup>1</sup>Includes 139,051,000 cases valued at \$133,766,000, sold through coin-operated vending machines. Establishments reporting class-of-customer data owned and operated 331,922 vending machines in 1954, and also serviced an additional number (unknown) of machines owned by the retailer.

## Miscellaneous Food Preparations

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

<u>Code</u>	<u>Title</u>
2091--	Leavening Compounds
2092--	Shortening and Cooking Oils
2093--	Margarine
2094--	Corn Wet Milling
2095--	Flavorings
2097--	Manufactured Ice
2098--	Macaroni and Spaghetti
2099--	Miscellaneous Food Preparations, Not Elsewhere Classified

2091--Leavening Compounds (Full Standard Industrial Classification Title: Baking Powder, Yeast, and Other Leavening Compounds)

This industry comprises establishments primarily engaged in the manufacture of baking powder, yeast, and other compounds used for leavening purposes. Establishments primarily engaged in manufacturing yeast tablets for human use are classified in Industry 2834, Pharmaceutical Preparations. For a detailed list of primary products of Industry 2091, refer to Table 6A, product codes 2091111 to 2091271.

The value of shipments of Industry 2091, Leavening Compounds, in 1954 totaled \$71 million. This included shipments of primary products (leavening compounds) valued at \$63 million, and shipments of secondary products valued at \$8 million. Industry 2091 shipments of leavening compounds (primary products) in 1954 represented 89 percent of its total product shipments (primary and secondary).

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$6 million are excluded from the \$71 million value of shipments of Industry 2091. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2091 shipments of leavening compounds in 1954 represented 90 percent of the leavening compounds valued at \$70 million shipped by all industries.

2092--Shortening and Cooking Oils (Full Standard Industrial Classification Title: Shortening and Other Cooking and Edible Fats and Oils Not Elsewhere Classified)

This industry comprises establishments primarily engaged in manufacturing edible vegetable and compound shortenings, vegetable cooking oils, salad oils, and other refined table oils not elsewhere classified, by further processing of purchased animal and vegetable oils. Refined salad or cooking oils include those which have been bleached, deodorized, or winterized. Other products included in this industry are mono- and di-glycerides, olive oil, and refined vegetable oils. Establishments primarily engaged in producing oleomargarine are classified in Industry 2093, Oleomargarine; corn oil in Industry 2094, Corn Wet Milling; and cottonseed, linseed, soybean, marine, and other animal and vegetable oils in Group 288, Vegetable and Animal Oils.

For a detailed list of primary products of Industry 2092, refer to Table 6A, product codes 2092011 to 2092071.

The value of shipments of Industry 2092, Shortening and Cooking Oils in 1954 totaled \$935 million. This included shipments of primary products (shortening and cooking oils) valued at \$795 million, shipments of secondary products valued at \$139 million, and miscellaneous receipts of \$2 million.

Industry 2092 shipments of shortening and cooking oils (primary products) in 1954 represented 85 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 82 percent. Secondary products shipped by this industry in 1954 consisted mainly of

margarine, \$78 million; cottonseed oil mill products, \$22 million; and other vegetable and animal oils, \$11 million.

Industry 2092 shipments of shortening and cooking oils in 1954 represented 89 percent of these products valued at \$888 million shipped by all industries. This coverage ratio was 96 percent in 1947. Other industries shipping shortening and cooking oils consisted mainly of Industry 2884, Vegetable Oil Mills, N.E.C., \$21 million, and Industry 2011, Meat Packing Plants, \$19 million.

2093--Margarine (Full Standard Industrial Classification Title: Oleomargarine)

This industry comprises establishments primarily engaged in manufacturing oleomargarine, margarine, nut margarine, etc. For a detailed list of primary products of this industry, refer to Table 6A, product codes 2093011 to 2093019.

The value of shipments of Industry 2093, Margarine, in 1954 totaled \$192 million. This included shipments of primary products (margarine) valued at \$172 million, and shipments of secondary products valued at \$20 million.

Industry 2093 shipments of margarine (primary products) in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 81 percent. Secondary products shipped by this industry in 1954 consisted mainly of shortening and salad oils, \$9 million; and salad dressings, including mayonnaise, \$6 million.

Industry 2093 shipments of margarine in 1954 represented 62 percent of the margarine, valued at \$278 million, shipped by all industries. This coverage ratio was 73 percent in 1947. Other industries shipping margarine consisted mainly of Industry 2092, Shortening and Cooking Oils, \$78 million.

2094--Corn Wet Milling (Full Standard Industrial Classification Title: Corn Sirup, Corn Sugar, Corn Oil, and Starch)

This industry comprises establishments primarily engaged in manufacturing sirup, sugar, oil, and starch from corn (wet-process corn milling). Establishments primarily engaged in manufacturing potato, rice, wheat, root, and other starches are also included in this industry. Establishments primarily engaged in manufacturing mixed or blended sweetening sirups containing corn sirup are classified in Industry 2099, Miscellaneous Food Preparations, N.E.C., and those primarily engaged in manufacturing corn meal and grits are classified in Industry 2041, Flour and Meal.

For a detailed list of primary products of Industry 2094 refer to Table 6A, product codes 2094111 to 2094551.

The value of shipments of Industry 2094, Corn Wet Milling, in 1954 totaled \$458 million. This included shipments of primary products (corn wet milling products and starch) valued at \$419 million, and shipments of secondary products valued at \$39 million. The value of shipments of Industry 2094 contains 5 to 10 percent duplication owing to the reprocessing of starch and corn oil within the industry.

Industry 2094 shipments of primary products in 1954 represented 91 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 88 percent. Secondary products shipped by this industry in 1954 consisted mainly of sweetening sirup and molasses, mixed or blended, \$26 million.

Industry 2094 shipments of primary products (corn wet milling products and starch) in 1954 represented 96 percent of these products valued at \$436 million shipped by all industries. This coverage ratio was also 96 percent in 1947.

2095--Flavorings (Full Standard Industrial Classification Title: Flavoring Extracts and Flavoring Sirups, Not Elsewhere Classified)

This industry comprises establishments primarily engaged in manufacturing flavoring extracts, sirups, and fruit juices, not elsewhere classified, for soda fountain use or for the manufacture of soft drinks, and colors for bakers' and confectioners' use. Important products of this industry include flavoring extracts, flavoring concentrates; flavoring powders and pastes; burnt-sugar and other food colors; flavoring sirups; and crushed fruit for fountain use. Establishments primarily engaged in manufacturing frozen concentrated fruit juices are classified in Industry 2037, Frozen Fruits and Vegetables; chocolate sirups in Industry 2072, Chocolate and Cocoa Products; mixed or blended sweetening sirups and molasses in Industry 2099, Miscellaneous Food Preparations, N.E.C., and synthetic food dyes and colors in Industry 2822, Intermediate Coal Tar Products.

For a detailed list of primary products of Industry 2095 refer to Table 6A, product codes 2095111 to 2095481.

The value of shipments of Industry 2095, Flavorings, in 1954 totaled \$446 million. This included shipments of primary products (flavorings) valued at \$406 million, shipments of secondary products valued at \$38 million, and miscellaneous receipts of \$2 million.

Industry 2095 shipments of flavorings in 1954 represented 91 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 93 percent. Secondary products shipped by this industry in 1954 consisted mainly of chocolate and cocoa products, \$11 million; canned fruit juices, \$5 million; and bottled soft drinks, \$3 million.

Industry 2095 shipments of flavorings in 1954 represented 87 percent of these products valued at \$464 million shipped by all industries. This coverage ratio was 89 percent in 1947.

#### 2097--Manufactured Ice

This industry comprises establishments primarily engaged in manufacturing ice for sale. Establishments primarily engaged in manufacturing dry ice are classified in Industry 2896, Compressed and Liquified Gases. Establishments primarily engaged in harvesting and storage of natural ice for sale and cold storage warehouses manufacturing ice are excluded from the Census of Manufactures. For a detailed list of primary products of Industry 2097, refer to Table 6A, product codes 2097011 to 2097051.

The value of shipments of Industry 2097, Manufactured Ice, in 1954 totaled \$143 million. This included shipments of primary products (manufactured ice) valued at \$128 million, and miscellaneous receipts (mainly for cold storage rental) of \$14 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$27 million are excluded from the \$143 million value of shipments of Industry 2097. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2097 shipments of manufactured ice in 1954 represented virtually 100 percent of its total product shipments (primary and secondary). In 1947 this primary product specialization ratio was also 100.

Industry 2097 shipments of manufactured ice in 1954 represented 97 percent of the manufactured ice valued at \$133 million shipped by all manufacturing industries. This coverage ratio was 98 percent in 1947.

2098--Macaroni and Spaghetti (Full Standard Industrial Classification Title: Macaroni, Spaghetti, Vermicelli, and Noodles)

This industry comprises establishments primarily engaged in manufacturing macaroni, spaghetti, vermicelli, and noodles. Establishments primarily engaged in manufacturing packaged macaroni or spaghetti dinners with cheese or sauce, except

canned, are also included in this industry. Establishments primarily engaged in manufacturing canned spaghetti are classified in Industry 2033, Canning and Preserving, Except Fish.

For a detailed list of primary products of Industry 2098 refer to Table 6A, product codes 2098011 to 2098051.

The value of shipments of Industry 2098, Macaroni and Spaghetti, in 1954 totaled \$150 million. This included shipments of primary products (macaroni products) valued at \$144 million, shipments of secondary products valued at \$3 million, and miscellaneous receipts of \$3 million.

Industry 2098 shipments of macaroni products in 1954 represented 98 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio also was 98 percent.

Industry 2098 shipments of macaroni products in 1954 represented 95 percent of these products valued at \$151 million shipped by all industries. This coverage ratio was 99 percent in 1947.

#### 2099--Miscellaneous Food Preparations, Not Elsewhere Classified

This industry comprises establishments primarily engaged in manufacturing prepared foods and miscellaneous food specialties not elsewhere classified, such as baked beans (not canned); bakers' confectioners', and household supplies (including chili pepper and powder, desiccated and shredded coconut, marshmallow creme, pie and cake fillings, and powdered sugar); bouillon cubes; brown bread (canned, Boston, and other); coffee; instant chocolate and cocoa; ready-to-mix desserts; egg albumen; eggs (dehydrated, desiccated, processed, canned, liquid and frozen); "health foods;" ice-cream cones and wafers; Italian, Spanish, Mexican, and Chinese cakes and other "native" preparations; meat pies; mincemeat; molasses (mixed or blended); peanut products (except peanut candy and salted peanuts); pectin; potato chips; ravioli; spices and meat seasonings; sweetening sirups (including honey, maple sirup, and sorghum); tea, packaged and blended; vinegar and cider. Establishments primarily engaged in manufacturing instant chocolate and cocoa from purchased chocolate are included in this industry; but they are classified in Industry 2072, Chocolate and Cocoa products, if the establishment also manufactures chocolate primarily from cocoa beans.

The SIC definition for Industry 2099 has been amended by the Bureau of the Budget to include former SIC Industry 2096, Vinegar and Cider.

An important segment of Industry 2099 comprises establishments primarily engaged in coffee roasting. As indicated in Table 8, the value of shipments of this segment of the industry in 1954 was \$2,007 million, or 61 percent of the total value of shipment of Industry 2099. Value added by manufacture in coffee roasting plants was \$341 million, or 42 percent of the Industry 2099 total.

For a detailed list of primary products of Industry 2099, refer to Table 6A, product codes 2099111 to 2099798, and 2072211 to 2072295.

The value of shipments of Industry 2099, Miscellaneous Food Preparations, Not Elsewhere Classified, in 1954 totaled \$3,256 million. This included shipments of primary products (miscellaneous food preparations, not elsewhere classified) valued at \$3,057 million, shipments of secondary products valued at \$169 million, and miscellaneous receipts of \$30 million.

Industry 2099 shipments of miscellaneous food preparations not elsewhere classified in 1954 represented 94 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 91 percent. Secondary products shipped by this industry in 1954 included salad dress-

# MISCELLANEOUS FOOD PREPARATIONS

20H-3

ings, \$12 million; canned soups and poultry products, \$11 million; and jams, jellies, and preserves, \$10 million.

Industry 2099 shipments of primary products (miscellaneous food preparations, not elsewhere classified), in 1954 represented 86 percent of these products, valued at \$3,549 million shipped

by all industries. This coverage ratio was 89 percent in 1947. Other industries shipping products of Industry 2099 included Industry 2072, Chocolate and Cocoa Products, \$295 million, Industry 2033, Canned Fruits and Vegetables, \$33 million, Industry 2094, Corn Wet Milling, \$27 million, and Industry 2015, Poultry Dressing Plants, \$24 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. (However, in the case of the "Shortening and cooking oils," "Oleomargarine," "Manufactured ice" and "Food preparations, n.e.c." industries a different method was used for 1954: all employees represents the average of 12 monthly figures and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November.) For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Shortening and cooking oils" and "Oleomargarine" industries, 1947 value added by manufacture does not equal the published value of products shipped less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of products shipped. Since the 1949-1952 figures are estimates derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1947-1954, value of shipments, except in the case of "Shortening and cooking oils" for 1929, where the data represent value of production; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$31.9 million for "Shortening and cooking oils."

<sup>7</sup>The figures for 1927-1954 include, whereas those for 1914-25 exclude, data for establishments primarily engaged in the manufacture of vegetable oils.

<sup>8</sup>"Shortening and cooking oils" and "Macaroni and spaghetti" were formerly included with "Food preparations, n.e.c." separate figures are, therefore, not available prior to 1914.

<sup>9</sup>The figures for "Flavorings" for 1931 and earlier years are not sufficiently comparable with those for later years to be shown in this table because they include data for malt extracts and exclude data for certain dairymen's supplies.

<sup>10</sup>Part of the apparent decline in the ice industry from 1954 to 1947 may be attributed to the fact that in 1947 a number of small establishments in which the primary activity was the resale of non-manufactured products, such as coal, were included in the Census of Manufactures. In the 1954 Census, such establishments were classified in retail or wholesale trade and included in the Census of Business, owing to the adoption of more stringent classification practices. This difference between the 1947 and 1954 Censuses, it is believed, had a substantial effect on the number of establishments but a much smaller effect on other statistics for the ice industry.

<sup>11</sup>No comparable figures are available for other years.

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2091, Leavening Compounds: Northeast—Massachusetts, 1 (20-99); Rhode Island, 1 (20-249); Pennsylvania, 3 (20-99); Ohio, 4 (1-19); Illinois, 4 (500-999); Michigan, 1 (1-19); Wisconsin, 3 (250-499); Minnesota, 2 (1-19); Iowa, 2 (1-19); Missouri, 2 (100-249); South—Maryland, 1 (20-99); District of Columbia, 1 (100-249); Louisiana, 2 (20-99); Texas, 1 (20-99); Pacific—Washington, 1 (20-99); California, 3 (20-99).

S.I.C. 2092, Shortening and Cooking Oils: Northeast—Massachusetts, 1 (1-19); New York, 13 (500-999); Pennsylvania, 1 (20-99); East North Central—Ohio, 3 (500-999); Indiana, 2 (250-499); Michigan, 1 (1-19); Wisconsin, 1 (1-19); South Atlantic—Maryland, 1 (1-19); Virginia, 2 (100-249); North Carolina, 2 (20-99); Florida, 2 (20-99); East South Central—Kentucky, 1 (100-249); Tennessee, 5 (1,000-2,499); Alabama, 1 (100-249); Mississippi, 1 (1-19); West South Central—Arkansas, 2 (20-99); Oklahoma, 1 (100-249).

S.I.C. 2093, Margarine: Northeast and North Central—New Jersey, 2 (100-249); Ohio, 3 (250-499); Indiana, 1 (250-499); Illinois, 3 (250-499); Michigan, 1 (100-249); Missouri, 2 (20-99); Nebraska, 1 (1-19); Kansas, 1 (20-99); South—Maryland, 1 (100-249); South Carolina, 1 (20-99); Alabama, 1 (20-99); Arkansas, 1 (20-99); Pacific—Oregon, 1 (1-19); California, 4 (100-249).

S.I.C. 2094, Corn Wet Milling: Northeast—Maine, 18 (100-249); Massachusetts, 1 (1-19); Rhode Island, 1 (1-19); New York, 2 (1-19); New Jersey, 2 (20-99); Pennsylvania, 2 (20-99); East North Central—Ohio, 4 (20-99); Indiana, 2 (1,000-2,499); Michigan, 1 (1-19); West North Central—Iowa, 4 (2,994); Missouri, 3 (1,103); South and West—North Carolina, 1 (1-19); Florida, 1 (1-19); Tennessee, 1 (1-19); Alabama, 1 (1-19); Texas, 2 (250-499); Idaho, 5 (100-249); California, 2 (20-99).

S.I.C. 2095, Flavorings: New England—Maine, 3 (20-99); New Hampshire, 1 (1-19); Vermont, 2 (1-19); Rhode Island, 8 (20-99); Connecticut, 2 (1-19); East North Central—Wisconsin, 7 (20-99); West North Central—Minnesota, 5 (20-99); Iowa, 4 (20-99); North Dakota, 1 (1-19); Nebraska, 3 (1-19); Kansas, 5 (20-99); South Atlantic—District of Columbia, 1 (1-19); North Carolina, 4 (1-19); South Carolina, 1 (1-19); Florida, 14 (20-99); East South Central—Kentucky, 2 (20-99); Alabama, 3 (20-99); Mississippi, 3 (1-19); West South Central—Arkansas, 2 (20-99); Louisiana, 8 (20-99); Oklahoma, 3 (1-19); Mountain—Colorado, 3 (20-99); Arizona, 2 (20-99); Utah, 1 (1-19); Pacific—Washington, 5 (20-99); Oregon, 5 (100-249).

S.I.C. 2097, Manufactured Ice: New England—Maine, 2 (1-19); New Hampshire, 1 (1-19); Vermont, 4 (1-19); Rhode Island, 10 (20-99); Connecticut, 14 (100-249); East North Central—Wisconsin, 7 (20-99); West North Central—Minnesota, 2 (20-99); South Dakota, 3 (1-19); South Atlantic—Delaware, 9 (20-99); Maryland, 25 (250-499); District of Columbia, 3 (100-249); Virginia, 43 (500-999); South Carolina, 45 (500-999); West South Central—Oklahoma, 72 (250-499); Texas, 228 (2,284); Mountain—Montana, 4 (20-99); Idaho, 4 (1-19); Wyoming, 3 (1-19); Utah, 4 (20-99); Nevada, 3 (20-99); Pacific—Oregon, 6 (20-99).

S.I.C. 2098, Macaroni and Spaghetti: New England—Massachusetts, 11 (250-499); Rhode Island, 3 (1-19); Connecticut, 5 (100-249); East North Central—Indiana, 1 (100-249); Michigan, 5 (100-249); Wisconsin, 2 (100-249); West North Central—Nebraska, 3 (250-499); Kansas, 1 (20-99); South and West—Maryland, 5 (20-99); District of Columbia, 1 (1-19); Virginia, 1 (1-19); Florida, 3 (20-99); Kentucky, 1 (100-249); Tennessee, 1 (100-249); Louisiana, 6 (100-249); Texas, 6 (20-99); Colorado, 1 (20-99); Arizona, 1 (1-19); Utah, 1 (20-99); Oregon, 2 (20-99).

S.I.C. 2099, Food Preparations, N.E.C.: New England—New Hampshire, 6 (20-99); Vermont, 6 (100-249); South Atlantic—West Virginia, 11 (20-99); South Carolina, 20 (20-99); Mountain—Montana, 6 (20-99); Idaho, 8 (500-999); Wyoming, 2 (1-19); New Mexico, 13 (20-99); Arizona, 19 (100-249); Nevada, 3 (1-19).

Electric motors driven by purchased energy.....do.	30	407	27	163
Electric motors driven by energy generated at the establishment.....do.	3	3	( <sup>6</sup> )	2

Note: Detailed figures may not add to the totals because of independent rounding.

NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than 500 thousand kwh. <sup>5</sup>Less than \$500 thousand. <sup>6</sup>Less than 500 hp.

D Withheld to avoid disclosing information for individual companies. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Percentage of value of primary products to total shipments, including primary and secondary products, and miscellaneous receipts.

## MISCELLANEOUS FOOD PREPARATIONS

20H-13

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries.)

	Shell egg sales <sup>16</sup> .....	10,536	xxx	xxx	xxx	
	Other miscellaneous receipts.....	3,368	xxx	xxx	xxx	

xxx Not applicable.

<sup>1</sup>Includes the following: \$19,410 thousand shipped by plants classified in Industry 2011, Meat Packing Plants; \$15,710 thousand shipped by plants classified in Industry 2035, Pickles and Sauces; \$8,959 thousand shipped by plants classified in Industry 2093, Margarine; and \$20,944 thousand shipped by plants classified in Industry 2884, Vegetable Oil Mills, N.E.C.

<sup>2</sup>Includes the following: \$78,059 thousand shipped by plants classified in Industry 2092, Shortening and Cooking Oils.

<sup>3</sup>Of this figure, 50 percent consists of the following product classes: Desserts, ready to mix, code 20991; Synthetic resins, except protective coating, code 28235; Other synthetic organic chemicals, code 28294.

<sup>4</sup>Less than \$100 thousand.

<sup>5</sup>Includes \$5,946 thousand shipped by plants classified in Industry 2081, Bottled Soft Drinks.

<sup>6</sup>Includes \$4,084 thousand shipped by plants classified in Industry 2081, Bottled Soft Drinks.

<sup>7</sup>Represents resales for which the cost of goods sold was not reported separately; this figure is not included in the "resales" item in Table 3.

<sup>8</sup>Includes \$7,709 thousand shipped by plants classified in Industry 2051, Bread and Related Products.

<sup>9</sup>Includes \$3,369 thousand shipped by plants classified in Industry 2035, Pickles and Sauces.

<sup>10</sup>Includes the following: \$17,805 thousand shipped by plants classified in Industry 2015, Poultry Dressing Plants and \$5,357 thousand shipped by plants classified in Industry 2021, Creamery Butter.

<sup>11</sup>Includes \$4,620 thousand shipped by plants classified in Industry 2035, Pickles and Sauces.

<sup>12</sup>Includes the following: \$6,584 thousand shipped by plants classified in Industry 2015, Poultry dressing plants; \$10,121 thousand shipped by plants classified in Industry 2035, Pickles and Sauces; \$8,560 thousand shipped by plants classified in Industry 2037, Frozen Fruits and Vegetables; \$4,238 thousand shipped by plants classified in Industry 2051, Bread and Related Products; \$13,873 thousand shipped by plants classified in Industry 2071, Confectionery products; \$2,240 thousand shipped by plants classified in Industry 2072, Chocolate and Cocoa Products; and \$3,496 thousand shipped by plants classified in Industry 2095, Flavorings.

<sup>13</sup>Product class 20722, chocolate and cocoa products (except coatings) is treated as "primary" both to Industry 2072, Chocolate and Cocoa Products, and Industry 2099, Food Preparations, N.E.C. Establishments primarily engaged in making these chocolate and cocoa products were classified in Industry 2099 if the products were made from purchased cocoa powder and in Industry 2072 if made from cocoa beans. Detailed statistics on the shipments of chocolate and cocoa products are shown in Bulletin MC-20F, Sugar, Confectionery and Related Products.

<sup>14</sup>Includes the following: \$4,027 thousand shipped by plants included in Industry 2071, Confectionery products; \$293,038 thousand shipped by plants included in Industry 2072, Chocolate and Cocoa products and \$10,650 thousand shipped by plants included in Industry 2095, Flavoring.

<sup>15</sup>Of this figure, 16 percent consists of the following product classes: Frozen vegetables, product code 20372; Other industrial organic chemicals, product code 28296.

<sup>16</sup>Represents resales for which cost of goods sold was not reported separately; this figure not included in "resales" item in Table 3.

xxx Not applicable.

NA Not available.

<sup>1</sup>Does not include substantial quantities of baking powder manufactured by wholesale grocers classified in S.I.C. Industry Group 504, Groceries and Food Specialties; no statistics were obtained in the 1954 Censuses on the amount of baking powder manufactured in such establishments.<sup>2</sup>Quantity of active dry yeast reported was converted to compressed yeast equivalent at the rate of one pound of dry yeast to two pounds of compressed yeast.<sup>3</sup>Includes a small amount of inedible hydrogenated oil.<sup>4</sup>Code 2094181 has been combined with codes 2094111 and 2094115 for 1947.<sup>5</sup>Total includes a large amount of duplication, because of interplant shipments of crude oil.<sup>6</sup>Code 2094511 has been combined with code 2094598.<sup>7</sup>Code 2094521 has been combined with code 2094598; the combined figure also includes miscellaneous byproducts not specified by kind.<sup>8</sup>Code 2095311 has been combined with code 2095453.<sup>9</sup>Frozen fruit and berry juices are classified in product codes 2037171-179.<sup>10</sup>Codes 2099721, 25, 63, 65, 67, 68, 71, and 75 have been combined with code 2099798.<sup>11</sup>Includes "specialties" such as frozen waffles, pies, and combinations not classifiable elsewhere. Does not include frozen meats (product codes 2011111-411), dairy products (codes 2024011-098), seafood (code 2036111) or fruits and vegetables (codes 2037111-298).<sup>12</sup>Code 2072221 has been combined with code 2072231.<sup>13</sup>Detailed statistics for these products are shown in the report for Industry 2072.

## MANUFACTURES--INDUSTRY STATISTICS

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Product class, region, and State <sup>1</sup>	Value of shipments	Product class, region, and State <sup>1</sup>	Value of shipments	Product class, region, and State <sup>1</sup>	Value of shipments

1954 United States, total.....	1,886,736	Minnesota.....	10,805	California.....	271,012
1953 United States, total.....	1,683,458	Missouri.....	81,204		
1952 United States, total.....	1,568,927				
1951 United States, total.....	1,500,034				

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 20920, New York, Pennsylvania, Indiana, Wisconsin, Minnesota, Iowa, Missouri, Nebraska, Kansas, North Carolina, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and California; 20951, Virginia and Georgia; 20953, Massachusetts, Connecticut, New York, New Jersey, Missouri, Maryland, Georgia, Kentucky, Tennessee, Alabama, Louisiana, Texas, Oregon, and California; 20954, Massachusetts, Kansas, Arkansas, Louisiana, Texas, Arizona, Oregon, and California; 20991, Indiana and California; 20992, Maine, Massachusetts, Rhode Island, Maryland, District of Columbia, Kentucky, Tennessee, Alabama, Colorado, Utah, Washington, and Oregon; 20993, Vermont, Massachusetts, New York, New Jersey, Illinois, Maryland, North Carolina, Georgia, Alabama, Texas, and California; 20994, New York, New Jersey, Michigan, Minnesota, Oklahoma, and California; 20995, Connecticut, Nebraska, Kansas, North Carolina, South Carolina, Kentucky, Alabama, and Mississippi.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2091	LEAVENING COMPOUNDS (entire industry).....	43	2,685	12,246	1,987	3,840	8,696	45,350	25,834	71,185

	Less than 50% specialization.....	32	4,244	13,493	2,777	5,026	6,884	31,587	46,024	77,611
20722	Other chocolate and cocoa products: <sup>2</sup>									
	All establishments specializing in product class.	20	271	1,054	193	402	591	2,286	5,223	7,510
	Establishments with:									
	90% or more specialization.....	11	144	500	120	249	334	1,125	2,247	3,373

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>These establishments were primarily engaged in manufacturing chocolate and cocoa products from purchased cocoa powder rather than from cocoa beans and were therefore classified in Industry 2099 rather than in Industry 2072. Product Class 20722 was treated as "primary" to both industries.

## Major Group 21.—Tobacco Manufactures

This major group includes establishments engaged in manufacturing cigarettes, cigars, smoking and chewing tobacco, and snuff, and in stemming and redrying tobacco. The manufac-

ture of insecticides from tobacco byproducts is included in Major Group 28, Chemicals and Products.

Table 1.—GENERAL STATISTICS FOR THE INDUSTRY GROUP: 1954 AND EARLIER YEARS

NA Not available.

S Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

<sup>1</sup>In addition to data for operating establishments, manufacturers' central administrative offices and auxiliary units reported 7,204 employees with a payroll of \$36,615 thousand in 1954. Similar data are shown for the years 1949-1953 in the Annual Survey of Manufactures volumes. Data for these units are not available for the years prior to 1949.

<sup>2</sup>The figures for 1939 through 1954 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

<sup>3</sup>Value of products less costs of materials, supplies, fuel, electricity, and contract work. For 1899-1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

<sup>4</sup>Driven by purchased energy.

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

<sup>6</sup>The figures for value added by manufacture are omitted because they include Internal Revenue taxes.

## MANUFACTURES—INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS FOR INDUSTRY GROUPS BY REGIONS AND STATES: 1954 AND 1947

NOTE: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Each producing State not shown separately has been withheld either (a) to avoid disclosing figures for individual companies; or (b) because the State has less than 100 employees in the industry group. Such State figures are included, however, in the appropriate regional and United States totals.<sup>2</sup>Less than \$500 thousand.<sup>3</sup>This industry sub-group consists of a single four-digit industry. Detailed data by States are included in the four-digit industry tables.

<sup>1</sup>The total inventories, reported in the 1954 Census for Industry 2141 were allocated by type of inventory on the basis of the distribution reported in the 1953 Annual Survey of Manufactures.

## Tobacco Manufactures

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2111	Cigarettes
2121	Cigars
2131	Chewing and Smoking Tobacco
2141	Tobacco Stemming and Redrying

All tobacco products produced by manufacturing establishments are produced at establishments classified in this major group of industries. The principal companies operating establishments in this major group produce tobacco products of more than one of the tobacco industries. However, for the most part, tobacco products are made at separate establishments of these companies which specialize in the products of a particular industry. Consequently, there is a relatively high degree of primary product specialization within each tobacco industry.

All tobacco products manufactured for sale in this country are subject to a manufacturers' excise tax, except for stemmed and/or redried leaf tobacco which, although classified as "manufactured" tobacco products in the Census, are not defined as "manufactured" tobacco products for taxation purposes. In reporting to the Census of Manufactures, respondents were instructed to report the gross value of each product, f.o.b. plant, exclusive of excise tax, and to report separately the excise taxes paid. The costs reported for materials consumed also exclude any excise taxes paid on these materials. This corresponds to the reporting methods followed in the 1947 Census.

In the 1954 and 1947 Censuses, production rather than shipments data were secured from tobacco manufacturers, because some large manufacturers stated that they could not provide accurate information on the value of shipments from their factories. Since most of the products of Industry 2141, Tobacco Stemming and Redrying, are consumed as raw materials in one of the other tobacco industries, there is duplication in the aggregate value of production for the major group.

The number of establishments shown in this report for the tobacco group falls below the corresponding number shown in the reports of the Commissioner of Internal Revenue. The difference is due to the following causes: (1) Under the licensing system of the Bureau of Internal Revenue, the same establishment may apply for and report under more than one license—whereas for census purposes such an establishment generally would make only one report. (2) A considerable number of establishments licensed to manufacture tobacco products sold all the tobacco products produced at retail (particularly in the cigar and smoking tobacco industries) and, therefore, were not covered by the Census of Manufactures. (See Introduction.) (3) A number of manufacturers of cigarette making and tobacco processing machinery are licensed to manufacture tobacco products, which they do only on an experimental basis; most of these establishments reported no production in 1954, however.

As a result of (2) above, the quantities of cigarettes, cigars, chewing and smoking tobacco and snuff, as shown in this report, vary slightly from the corresponding quantities published by the Bureau of Internal Revenue. Although all of these products produced by manufacturing establishments are included in the Census statistics, the small amounts produced at retail or wholesale establishments are excluded. Another circumstance that causes variance from the quantities published by the

Bureau of Internal Revenue is the reporting to the Census by some establishments on a fiscal rather than a calendar year basis.

### 2111—Cigarettes

This industry comprises establishments primarily engaged in the manufacture of cigarettes.

The value of production of Industry 2111, Cigarettes, in 1954 totaled \$1,641 million (exclusive of excise taxes). This production consisted almost entirely of cigarettes with only one percent accounted for by products primary to other industries, such as chewing and smoking tobacco and cigars. In 1947 the primary product specialization ratio was also close to 100 percent. Almost all of the cigarettes produced both in 1954 and 1947 were produced by establishments in this industry. Plants primarily engaged in producing chewing and smoking tobacco and snuff and cigars also produced a small amount of cigarettes.

### 2121—Cigars

This industry comprises establishments primarily engaged in the manufacture of cigars. Retail stores producing cigars are classified in Trade industries.

The value of production of Industry 2121, Cigars, in 1954 totaled \$339 million (exclusive of excise taxes). This included production of primary products (cigars) valued at \$333 million (virtually all of the cigar production in all manufacturing industries), secondary products valued at \$4 million, and miscellaneous receipts (mainly scrap and salable refuse) of \$2 million.

Industry 2121 production of cigars in 1954 represented 99 percent of its total production of all products (primary and secondary). In 1947, this primary product specialization ratio was also 99 percent. Secondary products produced by Industry 2121 in 1954 consisted of stemmed and/or redried leaf tobacco and relatively small quantities of chewing and smoking tobacco.

2131--Chewing and Smoking Tobacco (Full Standard Industrial Classification title: Tobacco, Chewing and Smoking, and Snuff)

This industry comprises establishments primarily engaged in the manufacture of chewing and smoking tobacco and snuff. For a detailed list of primary products of Industry 2131, refer to Table 6, product codes 2131011 to 2131055.

The value of production of Industry 2131, Chewing and Smoking Tobacco, was \$162 million in 1954. This included production of primary products (chewing and smoking tobacco and snuff) valued at close to \$155 million, production of secondary products (cigarettes and stemmed and/or redried leaf tobacco) valued at \$6 million, and miscellaneous receipts of \$1 million.

Industry 2131 production of chewing and smoking tobacco and snuff (primary products) in 1954 represented 96 percent of its total production of all manufactured products (primary and secondary). In 1947, this primary product specialization ratio was 98 percent.

Industry 2131 production of chewing and smoking tobacco and snuff in 1954 represented 89 percent of the chewing and smoking tobacco and snuff, valued at \$174 million, produced by all manufacturing industries. In 1947, this coverage ratio was 86. Other industries shipping chewing and smoking tobacco and snuff in 1954 were Industry 2111, Cigarettes, \$19 million; and small quantities from Industries 2121, Cigars, and 2141, Tobacco Stemming and Redrying.

2141—Tobacco Stemming and Redrying

This industry comprises establishments primarily engaged in the stemming and/or redrying of tobacco. Establishments primarily engaged in producing scrap filler for cigars are also included in the industry. Establishments which primarily buy and sell leaf tobacco as merchant wholesalers, agents or brokers, or whose principal source of receipts is for warehousing tobacco, are not included in this industry, although they may also be engaged in stemming and/or redrying tobacco; such establishments are classified in Wholesale Trade. For a detailed list of products of Industry 2141, refer to Table 6A, product codes 2141111 to 2141231.

Production of Industry 2141, Tobacco Stemming and Redrying, in 1954 totaled \$1,043 million. This included production of redried tobacco and/or stemmed tobacco (primary products) valued at \$1,012 million, and \$31 million of miscellaneous receipts for contract work, etc. (mainly commissions for stemming, packing and redrying of leaf tobacco owned by others). The primary product specialization ratio for both 1954 and 1947 was 100 percent.

Excluded from the \$1,043 million value of production in 1954 are receipts for merchandising valued at \$179 million. Receipts for merchandising (products bought and resold without

further manufacture, i.e., tobacco not removed from original packages or processed, etc.) are excluded from value of shipments, cost of materials, and value added, but these activities are reflected in other industry statistics, mainly employment and inventory statistics.

Industry 2141's production of stemmed and redried tobacco for sale or interplant transfer was \$1,012 million and represented 99 percent of these products, valued at \$1,019 million, produced for sale or interplant transfer by all manufacturing industries. In 1947, this coverage ratio was 98 percent. Other manufacturing industries producing stemmed and/or redried tobacco for sale or interplant transfer in 1954 consisted mainly of Industry 2121, Cigars, \$3.4 million; and Industry 2131, Chewing and Smoking Tobacco, \$3.6 million. These figures exclude the market value (estimated at about \$500 million) of tobacco stemmed and/or redried on a commission basis by plants classified in Industry 2141. The commissions received for processing this tobacco are included in the miscellaneous receipts of Industry 2141. Excluded from these figures are the value of stemmed and redried tobacco produced in plants classified in Retail or Wholesale Trade, such as warehouses or merchant wholesalers, data for which are not available.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments in other industries.

## TOBACCO MANUFACTURES

NA Not available.

<sup>1</sup>For 1954, all employees represents the average number for the payroll period ended nearest the fifteenth of each month; production workers was calculated by subtracting from this all employees total the average number of nonproduction employees for the four months for which such information was collected: March, May, August and November. For the period 1949-1953, both figures are based on average employment for these four months. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction employees for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. Internal Revenue taxes are not included in value added by manufacture. See Introduction "Value Added by Manufacture."

<sup>3</sup>The figures for cost of materials, etc., exclude Internal Revenue taxes for all years.

<sup>4</sup>For all years except 1929, value of production; for 1929, value of shipments. Internal Revenue taxes are not included. See Introduction "Value of shipments."

<sup>5</sup>The decrease in number of establishments from 1947 to 1954 reflects, in part, combined reports in 1954 for operations at a single location which had been reported separately in 1947, as well as the inclusion in retail or wholesale trade of certain small establishments, producing cigarettes on a custom basis in addition to their other activities (these establishments were included in manufacturing for 1947).

<sup>6</sup>The figures for 1949 to 1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>7</sup>The figures for value added by manufacture and value of products for 1929 and earlier years have been omitted because they contain Internal Revenue taxes.

<sup>8</sup>The coverage of Industry 2121, Cigars, was incomplete in 1933.

## MANUFACTURES - INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2111, Cigarettes: All Other Divisions--New York, 4 (100-249); New Jersey, 1 (500-999); Pennsylvania, 1 (100-249).

S.I.C. 2121, Cigars: New England--New Hampshire, 3 (250-499); Massachusetts, 20 (250-499); Rhode Island, 1 (1-19); Middle Atlantic--New York, 92 (100-2499); New Jersey, 10 (2,500-4,999); North Central--Ohio, 9 (1,000-2,499); Indiana, 8 (500-999); Illinois, 28 (100-249); Michigan, 6 (250-499); Minnesota, 1 (1-19); Missouri, 6 (20-99); South and West--Maryland, 2 (100-249); Virginia, 2 (500-999); West Virginia, 5 (500-999); North Carolina, 1 (100-249); South Carolina, 1 (1,000-2,499); Georgia, 2 (500-999); Florida, 56 (8524); Kentucky, 3 (500-999); Tennessee, 1 (100-249); Alabama, 2 (500-999); Louisiana, 3 (500-999); Texas, 3 (250-499); California, 13 (250-499).

S.I.C. 2131, Chewing and Smoking Tobacco: Northeast--Massachusetts, 1 (1-19); New Jersey, 2 (250-499); Pennsylvania, 12 (100-249); Ohio, 5 (100-249); Michigan, 3 (100-249); Wisconsin, 2 (1-19); Missouri, 4 (500-999); South and West--Delaware, 1 (20-99); Virginia, 4, (1,000-2,499); West Virginia, 1 (250-499); North Carolina, 3 (1,000-2,499); California, 1 (1-19).

S.I.C. 2141, Tobacco Stemming and Redrying: Northeast--Connecticut, 2 (1-19); New York, 1 (1-19); South Atlantic--South Carolina, 4 (250-499); Georgia, 1 (20-99); Florida, 3 (250-499); East South Central--Kentucky, 31 (3037); Tennessee, 3 (100-249).

## TOBACCO MANUFACTURES

Electric motors driven by energy generated at the establishment.....	19	...	3	...

NOTE: Detailed figures may not add to totals because of independent rounding.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Detail not available due to reporting difficulties.

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size class to the left).

<sup>1</sup>The specialization ratio compares the given industry's production of its primary products to its total production of all products (the primary products are listed in Tables 5B and 6A; the first 4 digits of the product code represents the industry to which the product is primary).

<sup>2</sup>The coverage ratio measures the extent to which the products primary to the given industry are made in the industry.

<sup>3</sup>Includes a negligible amount of miscellaneous receipts.

<sup>4</sup>Excludes tobacco stemmed and used in manufactured products in the same plant.

<sup>5</sup>Includes data for packing leaf, which were shown as "secondary products" in the 1947 chapter for these industries, but treated as "miscellaneous receipts" for 1954.

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—VALUE OF PRODUCTION BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between tobacco products, other products and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry.

Prod. class code	Class of products and miscellaneous receipts	Value of production				
		Cigarettes (S.I.C. 2111)	Cigars (S.I.C. 2121)	Chewing and smoking tobacco (S.I.C. 2131)	Tobacco stemming and redrying (S.I.C. 2141)	All manufacturing industries

xxx Not applicable.

NA Not available.

D Withheld to avoid disclosing figures for individual companies.

4,274 thousand pounds of tobacco stemmed and/or redried and used in establishments primarily engaged in manufacturing cigarettes, cigars, and chewing and smoking tobacco was reported in 1954. The reporting form for 1947 did not request that information.

## Major Group 22.—Textile Mill Products

This major group includes establishments engaged in performing any of the following operations regardless of the type of fiber used: (1) manufacturing yarn, thread, cordage, and twine (2) manufacturing woven fabric, carpets and rugs, braids, laces, knit fabric, knit garments, carpets and rugs, and other products from yarn (3) dyeing and finishing fibers, yarn, and fabrics; (4) coating, waterproofing and otherwise treating fabric; and (5) manufacturing hard surface floor covering. Establishments weaving or knitting fabrics and also manufacturing finished apparel or other fabricated textile products in the same establishment are included in this major group; those manufacturing apparel and other fabricated textile products from

fabrics knit or woven elsewhere are classified in Major Group 23, Apparel and Related Products. Knitwear converters, buying raw materials, arranging for the knitting and finishing, and selling the final product are included as manufacturers in Group 225, Knitting Mills; however, other textile converters, jobbers, or dealers are classified in Trade Industries. Establishments primarily engaged in sponging, shrinking, burling or mending of cloth for the trade or employing home workers for hand-knitting or hand-weaving of textile products, are included in Industry 2399, Fabricated Textile Products, Not Elsewhere Classified. The rubberizing of fabrics is classified in Major Group 30, Rubber Products.

Table 1.—GENERAL STATISTICS FOR THE INDUSTRY GROUP: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

NA Not available.

<sup>1</sup>In addition to data for operating establishments, manufacturers' central administrative offices and auxiliary units reported 12,782 employees with a payroll of \$81,094 thousand in 1954. Similar data are shown for the years 1949-1953 in the Annual Survey of Manufactures volumes. Data for these units are not available for the years prior to 1949.

<sup>2</sup>The figures for 1939 through 1954 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

<sup>3</sup>Value of products less cost of materials, supplies, fuel, electricity, and contract work. For 1899-1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

<sup>4</sup>Driven by purchased energy.

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in The Annual Survey of Manufactures volumes for this period.

<sup>6</sup>The figures for 1939 and 1937 include data for establishments that cut and stitch products from knit cloth made in separate mills of integrated companies. For other years, data for these establishments are included in the figures for the apparel and related products industries.

NOTE: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> D Withheld to avoid disclosing figures for individual companies.<sup>2</sup> Each producing state not shown separately has been withheld either (a) to avoid disclosing figures for individual companies; or (b) because the state had less than 100 employees in the industry group. Such state figures are included, however, in the appropriate divisional and United States totals.<sup>3</sup> Less than \$500 thousand.<sup>4</sup> The Census industries in the textile area are in greater detail than the Standard Industrial Classification. In order to provide this additional detail, sub-industries were established which are comparable to the S.I.C. in total. Some of the textile industries were also renumbered to provide totals for woolen and worsted manufactures, and cotton and related manufactures. The Census industry groups are shown below together with the comparable Census and S.I.C. industries.

Census Group	Census Industry	Standard Industrial Classification Industry
221 Woolen and Worsted Manufacture	2211 Scouring and Combing Plants	2211 Scouring and Combing Plants
	2212 Yarn Mills, Wool, Except Carpet	2221 (Part) Yarn Mills
	2213 Woolen and Worsted Fabrics	2232 Woolen and Worsted Fabrics
	2216 Finishing Wool Textiles	2262 Finishing Wool Textiles
222 Yarn and Thread Mills	2222 Yarn Throwing Mills	2222 Yarn Throwing Mills
	2223 Thread Mills	2223 Thread Mills
	2224 Yarn Mills, Cotton System	2221 (Part) Yarn Mills
223 Broad-Woven Fabrics	2233 Cotton Broad-Woven Fabrics	2231 Broad-woven fabric mills (cotton, silk, and synthetic fibers)
	2234 Synthetic Broad-Woven Fabrics	
226 Finishing Textiles, Except Wool	2261 Finishing Textiles, Except Wool	2261 Finishing Textiles, Except Wool

<sup>4</sup> This industry sub-group consists of a single four-digit industry. Detailed data by state are included in the four-digit industry tables.

## MANUFACTURES--INDUSTRY STATISTICS

Note: Detailed figures may not added to totals because of independent rounding.

## Woolen and Worsted Manufactures

This report shows 1954 Census of Manufactures statistics for establishments primarily engaged in the various manufacturing processes required to produce woolen and worsted yarns and broad-woven woolen and worsted fabrics and classified into each of the following four industries:

Code	Title
2211--	Scouring and Combing Plants
2212--	Yarn Mills, Wool, Except Carpet
2213--	Woolen and Worsted Fabrics
2216--	Finishing Wool Textiles

These industries represent the four major stages of fabrication of woolen and worsted cloth: fiber preparation, spinning of yarns, weaving of fabric, and finishing of fabric. They also produce a very large part of the woolen and worsted yarns used in the knitting industries, Group 225, Knitting Mills.

The Standard Industrial Classification does not provide for group totals for establishments primarily engaged in woolen and worsted manufacturing. In order to provide information for this important segment of the textile industry and to maintain comparability with earlier Census data, S.I.C. Industry 2211, Yarn Mills, which combines all yarn mills regardless of fiber or system of spinning, has been divided by system of spinning into two Census industries, and S.I.C. Industries 2232 and 2262 have been renumbered. Comparability with the S.I.C. industries at the four digit industry level is maintained as follows:

S.I.C. code	Title	Census code
2211	Scouring and Combing Plants	2211
2221	Yarn Mills	
	Yarn Mills, Wool, Except Carpet	2212
	Yarn Mills, Cotton and Silk Systems	2224
2232	Woolen and Worsted Fabrics	2213
2262	Finishing Wool Textiles	2216

Because of variations in the degree of integration of processes within individual mills, there is a considerable amount of overlapping of production among the four industries. The yarn mills industry (No. 2212) for example, produces only a small part of the wool yarns used in the weaving industry, the major part being produced in woolen and worsted weaving mills. The machinery data in Tables 9A and 9C indicated that mills with weaving equipment had approximately 64 percent of all the woolen and worsted spindles in place. The extent of overlapping of production among the industries can be approximated for some products from the data in Table 6A (total production less production on commission and shipments).

The Census Bureau conducts a quarterly Facts For Industry survey of broad-woven goods, including woolen and worsted fabrics, and a monthly survey of top and noil production. A routine comparison of Census of Manufactures returns with the commodity survey reports for the same mills resulted in some corrections to the commodity survey reports. In addition, the few mills which do not report in the commodity surveys were included in the Census. The production figures for the specified products in Table 6A may thus be taken as final data for 1954, superseding those previously published in Facts for Industry Series M15L "Woolen and Worsted Woven Goods," and M15H "Wool Consumption and Stocks."

### 2211--Scouring and Combing Plants

This industry comprises establishments primarily engaged in processing textile fibers to prepare them for spinning. Important processes included in this industry are wool scouring and carbonizing, and producing tops on worsted combs from wool, rayon, or other synthetic fibers. Establishments primarily engaged in the production of top from tow without combing, and in the production of nubs and slubs are also included in this industry. Byproducts of the industry include noils and recovered

wool grease. Plants primarily engaged in processing textile mill waste for spinning and in recovering fibers from clips and rags, are classified in Industry 2294, Processed Textile Waste. For a detailed list of primary products of Industry 2211, refer to Table 6A, product codes 2211011 to 2211098.

The 1947 Census of Manufactures and subsequent Annual Surveys of Manufactures included some establishments that had no manufacturing plants. These establishments purchased raw materials, usually wool, and had it scoured and combed for them on a commission basis. The S.I.C. classifies such jobbers (topmakers) in Wholesale Trade, and they were therefore excluded from the 1954 Census of Manufactures. The 1947 Census data for this industry have been retabulated to obtain data comparable with the 1954 information. This has resulted in deleting from the 1947 data 20 establishments with 321 employees and \$17,285,000 value added by manufacture. This revision also resulted in substantial reductions in the 1947 product shipments data for tops, noils, and scoured wool.

The value of shipments of Industry 2211, Scouring and Combing Plants, in 1954 totaled \$94 million. This included shipments of primary products (scoured wool, tops and related products) valued at \$55 million, shipments of secondary products valued at \$11 million, and miscellaneous receipts (mainly for commission, scouring or combing of wool owned by others) of \$28 million.

Industry 2211 shipments of scoured wool, tops and related products (primary products) in 1954 represented 83 percent of its total product shipments (primary and secondary). The primary product specialization ratio for 1947 is not available. Secondary products shipped by this industry in 1954 consisted principally of yarns spun on the woolen and worsted systems, and woolen and worsted apparel fabrics.

Industry 2211 shipments of scoured wool, tops and related products (primary products) in 1954 represented 60 percent of these products valued at \$91 million shipped for sale or interplant transfer by all manufacturing industries. The 1947 coverage ratio is not available. Information regarding the quantity and value of tops, noils and scoured wool shipped by topmakers and wool dealers is not available. Other manufacturing industries shipping scouring and combing plant products consisted mainly of Industry 2213, Woolen and Worsted Fabrics, and Industry 2212, Yarn Mills, Wool, Except Carpet.

### 2212--Yarn Mills, Wool, Except Carpet (Part of Standard Industrial Classification Industry 2221, Yarn Mills)

This industry comprises establishments primarily engaged in spinning, twisting, winding, or spooling yarn except carpet and rug yarn, on the woolen or worsted system. This includes yarn spun on the French, Bradford and American systems of worsted spinning. Establishments primarily engaged in manufacturing woolen or worsted carpet and rug yarns are classified in Industry 2271, Wool Carpets, Rugs and Carpet Yarn. For a detailed list of primary products of this subindustry, refer to Table 6A, product codes 2212011 to 2212077. The data shown for Industry 2212 represent a part of the Standard Industrial Classification Industry 2221 (See introduction above). Data for the remainder of S.I.C. Industry 2221 are published as Census Industry 2224, Yarn mills, cotton and silk systems and included in Bulletin MC-22B, Cotton, Rayon and Related Manufactures.

The value of shipments of Industry 2212, Yarn Mills, Wool, Except Carpet, in 1954 totaled \$252 million. This included shipments of primary products (woolen and worsted system yarns) valued at \$212 million, shipments of secondary products valued at \$16 million, and miscellaneous receipts (mainly commission spinning of yarns from materials owned by others) of \$24 million.

Industry 2212 shipments of woolen and worsted system yarns (primary products) in 1954 represented 93 percent of its total product shipments (primary and secondary). In 1947, this

primary product specialization ratio was 90 percent. The most important secondary products shipped by this industry in 1954 were scoured wool, tops and noils.

Industry 2212 shipments of woolen and worsted system yarns (except carpet yarns) in 1954 represented 85 percent of the total of these products valued at \$250 million shipped for sale or interplant transfer by all industries. The 1947 coverage ratio was 81 percent. The most important other industry shipping these products was Industry 2213, Woolen and Worsted Fabrics with shipments of \$18 million.

While Industry 2212 accounts for most of the shipments of woolen and worsted system yarn (except carpet yarn), the industry accounts for a much smaller percentage of the total production of such yarns. Integrated woolen and worsted mills, classified in Industry 2213, produced approximately two-thirds of the total production of these yarns. The bulk of this production is for use within the producing establishment.

**2213--Woolen and Worsted Fabrics** (Full Standard Industrial Classification Title and Code Number 2232--Broad-Woven Fabric Mills (Woolen and Worsted))

This industry comprises establishments primarily engaged in weaving woolen and worsted fabrics over 12 inches in width. Important products of this industry include woolen and worsted apparel fabrics, household fabrics, and industrial and mechanical fabrics; and woven felts and haircloth. Establishments primarily engaged in weaving wool carpets and rugs are classified in Industry 2271, Wool Carpets and Rugs. For a detailed list of primary products of Industry 2213, refer to Table 6A, product codes 2213111 to 2213398.

The definition and content of Industry 2213 and S.I.C. industry number 2232 are identical. The industry code number has been changed in order to publish separate data for the woolen and worsted manufactures sub-group.

The value of shipments of Industry 2213, Woolen and Worsted Fabrics, in 1954 totaled \$890 million. This included shipments of primary products (woolen and worsted fabrics) valued at \$781 million, shipments of secondary products valued at \$72 million, and miscellaneous receipts (mainly receipts for commission work on materials owned by others) of \$37 million.

Industry 2213 shipments of woolen and worsted fabrics (primary products) in 1954 represented 92 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 90 percent. Secondary products shipped by this industry in 1954 consisted mainly of scouring and combing mill products \$26 million, rayon and related broad woven fabrics \$24 million, and yarns spun on woolen systems (except carpet yarns) \$18 million.

Industry 2213 includes a large number of integrated mills which perform all operations from raw fiber to finished fabric. The industry's shipments consist mainly of finished fabrics, but it figures importantly in the scouring of wool, combing of wool tops and other fiber preparation, spinning of yarn on the woolen and worsted systems, and the weaving and finishing (dyeing, tentering, etc.) of the resulting cloth.

Industry 2213 shipments of woolen and worsted fabrics in 1954 represented 95 percent of the woolen and worsted fabrics valued at \$818 million shipped by all industries. The 1947 coverage ratio was 97 percent. Other industries shipping woolen and worsted fabrics included Industry 2234, Synthetic Broad Woven Fabrics, \$18 million.

**2216--Finishing Wool Textiles** (Full Standard Industrial Classification Title and Code Number 2262--Dyeing and Finishing Woolen and Worsted Goods)

This industry comprises establishments primarily engaged in dyeing and finishing woven woolen or worsted fabrics or in dyeing wool, tops, or yarn. The definition and content of Industry 2216 and S.I.C. industry number 2262 are identical.

A substantial number of the plants included in this industry are commission finishers of materials owned by others. In order to obtain consistent data for this industry, plants finishing their own materials were requested to delete the value of the unfinished product from both their cost of materials and their value of shipments. This, in effect, resulted in all establishments in the industry reporting on a comparable basis (i.e., as commission plants).

The plant specialization ratio of primary products to primary and secondary products is, therefore, not meaningful inasmuch as product information was not collected. However, the commission receipts reported by the industry are almost all for finishing materials and therefore the specialization ratio, including miscellaneous receipts, would be quite high (over 90 percent).

The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. This ratio is also not meaningful for this industry because of the absence of product information. An alternative procedure would be to calculate the coverage ratio on the basis of production rather than shipments. While data are not available for this purpose, it is known that the coverage ratio would be quite low because most of the top, yarn, and fabric are finished at the spinning or weaving mills and not at separately operated finishing mills.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Industry and census year	Establish- ments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments <sup>3</sup> (\$1,000)
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>For 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>In order to conform with the 1954 definition of this industry, the figures for 1947 have been revised to exclude "Topmakers" who do not perform any manufacturing operations but sell scoured wool or tops and noils which have been produced by others for their account on a contract or commission basis. The figures for 1954 and 1947 are not entirely comparable with those for earlier years, which include reports from topmakers.

<sup>5</sup>In 1939, "Woolen and worsted fabrics," "Yarn mills, wool systems, except carpet," and "Scouring and combining plants," were not classified as separate industries but were included in the industries formerly designated "Woolen and worsted manufactures-regular factories or jobbers engaging contractors" and "Woolen and worsted manufactures-contract factories." The figures for 1939 were obtained from a retabulation of the returns for these two industries.

<sup>6</sup>The figures for 1937 and 1935 have been obtained by combining the figures for the former industries "Wool scouring" and "Wool combing-commission, and tops for sale." Comparable figures are not available for years prior to 1935 because wool combing establishments were not shown as a separate industry but were included in the former industry "Worsted goods."

<sup>7</sup>Census industry definitions correspond to the Standard Industrial Classification but some of the industries have been renumbered and regrouped to provide totals for wool manufactures. The Census industry code numbers and the corresponding S.I.C. numbers, are as follows:

S.I.C. Code	Title	Census Code
2221	Yarn mills, wool, exc. carpet	2212
2232	Yarn mills, cotton and silk; system	2224
2262	Woolen and worsted fabrics	2213
	Finishing wool textiles	2216

<sup>8</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>9</sup>The figures for 1937 and 1935 have been obtained by combining the figures for the former industries "Woolen yarn" and "Worsted yarn" which were not shown as separate industries prior to 1935, but were included in the discontinued classifications "Woolen goods" and "Worsted goods."

<sup>10</sup>The figures for 1937 and 1935 have been obtained by combining the figures for the former industries "Woolen woven goods including woven felts" and "Worsted woven goods." Prior to 1935 these industries were part of the discontinued classifications "Woolen goods," "Worsted goods," "Hair cloth" and "Felt goods, wool, hair or jute," and separate figures are therefore not available for earlier years.

<sup>11</sup>For 1947-1954, "Value of Shipments" represents the value added by finishing; the "Cost of materials, etc.," includes the cost of dyestuffs but not the cost of unfinished cloth. Comparable figures for earlier years are not available.

<sup>12</sup>The figures for "Finishing wool textiles" for 1935 are not sufficiently comparable with those for later years to be shown in this table because they include data for establishments primarily engaged in winding or balling hand-knitting yarn and exclude data for dyeing and finishing mills of integrated companies engaged in both weaving and finishing at separate plant locations.

## WOOLEN AND WORSTED MANUFACTURES

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> D Withheld to avoid disclosing figures for individual companies.

General statistics for some producing States are not shown separately in the table (See Introduction "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2211, Scouring and Combing Plants: New England—Maine, 1 (1-19); New Hampshire, 1 (20-99); Rhode Island, 12 (1,000-2,499); Middle Atlantic—New York, 1 (1-19); New Jersey, 4 (100-249); North Central, South, and West—Michigan, 1 (1-19); Wisconsin, 2 (1-19); North Carolina, 1 (1-19); South Carolina, 3 (100-249); Texas, 2 (20-99); Oregon, 1 (1-19); California, 1 (20-99).

Census Code 2212, Yarn Mills, Wool, except Carpet: New England—Maine, 9 (500-999); New Hampshire, 8 (500-999); Vermont, 3 (20-99); Ohio, 3 (250-499); Illinois, 1 (250-499); Michigan, 1 (20-99); Wisconsin, 3 (100-249); Minnesota, 1 (1-19); South Atlantic—Delaware, 3 (100-249); Maryland, 1 (1-19); Virginia, 2 (20-99); North Carolina, 9 (1,000-2,499); Georgia, 1 (500-999); Oregon, 1 (250-499).

Census Code 2213, Woolen and Worsted Fabrics: New England—New Hampshire, 24 (3,877); Vermont, 9 (1,608); North Central—Indiana, 3 (100-249); Illinois, 2 (250-499); Michigan, 4 (250-499); Minnesota, 3 (100-249); Iowa, 2 (100-249); Missouri, 1 (20-99); South—Delaware, 1 (1-19); Maryland, 1 (250-499); Virginia, 8 (2,340); West Virginia, 1 (100-249); Georgia, 7 (2,500-4,999); Kentucky, 1 (20-99); Tennessee, 4 (500-999); Alabama, 1 (250-499); Texas, 2 (20-99); West—Utah, 1 (20-99); Washington, 2 (250-499); Oregon, 6 (500-999); California, 2 (1-19).

Census Code 2216, Finishing Wool Textiles: New England—New Hampshire, 1 (250-499); Rhode Island, 9 (250-499); Middle Atlantic—New York, 10 (250-499); New Jersey, 3 (500-999); All Other Divisions—Ohio, 2 (250-499); Wisconsin, 1 (20-99); Virginia, 2 (250-499); West Virginia, 1 (20-99); South Carolina, 1 (250-499); Georgia, 1 (20-99); California, 5 (20-99).

## MANUFACTURES--INDUSTRY STATISTICS

22A-5

Table 3.--DETAILED STATISTICS FOR THE UNITED STATES: 1954  
(For explanation of line captions see Introduction)

Item	Scouring and combing plants (S.I.C. 2211)	Yarn mills, wool, except carpet (Census Code 2212)	Woolen and worsted fabrics (Census Code 2213)	Finishing wool textiles (Census Code 2216)
Primary product specialization ratio <sup>1</sup> .....	83	93	92	(3)
Coverage ratio <sup>2</sup> .....	60	85	95	(3)
Number of establishments, total.....	74	171	343	56
With 1-19 employees.....	26	37	78	15
With 20-99 employees.....	28	77	87	32

End of year, total.....do...	17,947	42,100	215,932	12,614
Finished products.....do...	8,412	10,486	49,553	4,993
Work-in-process.....do...	3,637	17,912	95,745	6,236
Materials, supplies, fuel, etc.....do...	5,896	13,701	70,633	1,384
Expenditures for plant and equipment, total.....do...	3,129	4,158	14,435	1,403
Capital expenditures, new.....do...	2,391	3,302	11,714	1,307
New structures and additions to plant.....do...	(7)	(7)	3,087	(7)
New machinery and equipment.....do...	1,929	2,959	8,626	1,176
Expenditures for used plant and equipment.....do...	738	856	2,721	(7)
Horsepower rating of power equipment at end of 1954:				
Horsepower of prime movers and electric motors driven by purchased energy, total.....1,000 hp..	44	85	353	34
Engines, etc., driving electric generators.....do...	13	3	132	18
Engines, etc., not driving electric generators.....do...	2	1	8	3
Electric motors driven by purchased energy.....do...	29	81	213	13
Electric motors driven by energy generated at the establishment.....do...	7	3	54	10

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Relationships not meaningful because of predominance of miscellaneous receipts particularly receipts for contract and commission work on material owned by others. <sup>4</sup>Less than 500 tons. <sup>5</sup>Less than \$5 thousand. <sup>6</sup>Less than 500 thousand kwh. <sup>7</sup>Less than \$500 thousand.

## WOOLEN AND WORSTED MANUFACTURES

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

Ind. code	Industry and item	Total, all establishments	Establishments with an average of—									
			1-4 em- ployees	5-9 em- ployees	10-19 em- ployees	20-49 em- ployees	50-99 em- ployees	100-249 employees	250-499 employees	500-999 employees	1,000-2,499 employees	2,500 employees and over

	1947..	28,889	...	...	28,339	(4)	...	...	...	(4)

NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>If miscellaneous receipts are included in both the numerator and denominator of the calculation, the specialization ratio is 88 percent for 1954.

<sup>4</sup>Relationships not meaningful because of the predominance of miscellaneous receipts, particularly receipts for contract and commission finishing of materials owned by others.

## MANUFACTURES—INDUSTRY STATISTICS

22A-7

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between woolen and worsted products, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Scouring and combing plants (S.I.C. 2211)	Yarn mills, wool, except carpet (Census code 2212)	Woolen and worsted fabrics (Census code 2213)	Finishing wool textiles (Census code 2216)	Synthetic broad-woven fabrics (Census code 2234)	Other industries	All industries
	Total shipments of the industry.....	94,168	251,614	890,281	32,788	xxx	xxx	xxx

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 22110, New Jersey, Pennsylvania, and Virginia; 22120, Maine, Illinois, Wisconsin, Delaware, Virginia, and Oregon; 22131, Illinois, Michigan, Iowa, Maryland, Tennessee, Washington, and Oregon; 22132, Vermont, New Jersey, Michigan, Wisconsin, Minnesota, North Carolina, Georgia, Tennessee, and Oregon.

TABLE 7 NOT APPLICABLE TO THIS BULLETIN

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

Number of looms.....	3,792	795	2,997

<sup>1</sup>Degree of integration determined by type of machinery reported.

## Cotton, Rayon, and Related Manufactures

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2222--	Yarn Throwing Mills
2223--	Thread Mills
2224--	Yarn Mills, Cotton System
2233--	Cotton Broad-Woven Fabrics
2234--	Synthetic Broad-Woven Fabrics
2241--	Narrow Fabric Mills
2261--	Finishing Textiles, Except Wool

Industries covered in this report are engaged in processing cotton, silk, and man-made fibers into yarn, thread, and fabric. The seven industries described separately below represent the three major stages of fabrication: spinning or throwing of yarn, weaving of fabric, and finishing.

In 1954, as in 1947, the Census industries in this area of textiles are in greater detail than the Standard Industrial Classification. In order to provide this additional detail, sub-industries comparable to the Standard Industrial Classification were established, as follows:

Census Industry	Standard Industrial Classification Industry
2212 Yarn mills, wool, except carpet	2221 Yarn mills
2224 Yarn mills, cotton system	
2233 Cotton broad-woven fabrics	2231 Broad-woven fabric mills (cotton, silk, and synthetic fiber)
2234 Synthetic broad-woven fabrics	

By showing data for these sub-industries, greater comparability with past Censuses is provided and separate information is made available for the important segments of the textile industries. Data for Census Industry 2212 are contained in the report for Woolen and Worsted Manufactures.

Because of variations in the degree of integration of processes within individual mills, there is a considerable amount of overlapping of production among the seven industries. Industry 2224, Yarn Mills, Cotton System, for example, produces only a small part of the spun yarn used in weaving mills (Industries 2233, 2234, and 2241); the bulk of such yarn is produced in integrated mills classified in the weaving industries. The extent to which products, such as yarns, are produced for consumption by the producing establishment can be approximated from Table 6A by taking the difference between (1) total production for all purposes and (2) the sum of production on commission and shipments and interplant transfers. The variations in integration within mills, as measured by the kinds of equipment employed, are described statistically in Table 9D.

Integration at the company level, as distinguished from integration at the mill level, although not measured specifically in this report, is also of considerable importance.

The 1954 product shipments data for weaving mills, Industries 2233 and 2234 are affected by a change in reporting procedures as compared to 1947 and subsequent Annual Surveys of Manufactures. In 1947, establishments producing gray goods, finishing such goods and selling finished fabrics reported such fabrics as gray goods with their gray goods value and as a separate item reported the value added by finishing the goods. In 1954 establishments were requested to report value of gray goods only when such goods were shipped in the gray goods state. Shipments of finished fabrics were reported as finished goods at their full value. The resulting figures for 1954 gray goods are therefore not comparable to the 1947 information. This is particularly true for such fabric classes as cotton sheetings and towelings, and rayon and acetate pile, drapery,

and upholstery fabrics where a large proportion of the gray goods are finished in the producing mill.

The reporting of finished goods shipments by finishing plants was also changed. In 1947 such plants shipping fabrics owned by the plant reported the value added by finishing fabrics. In 1954 such fabrics were reported at their full value.

Data for machinery installed in establishments classified in the industries included in this bulletin are shown in Tables 9A-9D. Comparable statistics for cotton-system spinning spindles appear in the Census Bureau's monthly Facts For Industry Series M15-1 & 3, "Cotton, Linters and Synthetic Staple." The number of spindles shown in this report for both 1954 and 1947 are approximately one million less than the number shown in the Facts For Industry Series. This difference is largely due to the cotton-system spindles operated by establishments classified in industries other than those listed above, such as knitting mills and cordage and twine mills. Such establishments were not asked to report the number of spindles or other textile machinery in possession.

The loom information shown in Tables 9B and 9D are comparable to data shown in the Facts For Industry Series M15A, "Cotton Broad Woven Goods;" M15C, "Synthetic Broad Woven Goods;" and M15M, "Tire Cord and Tire Fabrics." Differences to the data shown in the Facts For Industry Series are generally small and are due to classification changes and reporting changes for individual establishments.

The Census Bureau conducts a quarterly Facts For Industry survey of broad woven goods, including tire cord and tire fabric, and an annual survey of cotton, silk, and man-made fiber broad woven fabrics finished. These surveys include data on fabric production and fabric finished (in terms of linear yards) and tire cord and fabric production in pounds. A routine comparison of Census of Manufactures returns with the commodity survey reports for the same mills resulted in some corrections to the commodity survey reports. In addition, the few mills which do not report in the commodity surveys were included in the Census. The production figures for the specified products in Table 6A may thus be taken as final data for 1954, superseding those previously published in Facts For Industry Series M15A, "Cotton Broad Woven Goods;" M15C, "Synthetic Broad Woven Goods;" M15M, "Tire Cord and Tire Fabric;" and M15G, "Cotton and Synthetic Woven Goods Finished." The production data shown for product code 2234798, All other woven fabrics, is however, not comparable to the information shown in the M15C Facts For Industry report because it includes open mesh bagging which is excluded from the commodity survey.

### 2222--Yarn Throwing Mills

This industry comprises establishments primarily engaged in throwing or twisting filament yarn (continuous strands) of silk, rayon, or other synthetic fibers. Establishments primarily engaged in the winding and warping of filament yarn are also included in this industry; those engaged in similar operations on spun yarn are classified in Industry 2224, Yarn Mills, Cotton System. For a detailed list of primary products of Industry 2222, refer to Table 6A, product codes 2222011 to 2222098.

The value of shipments of Industry 2222, Yarn Throwing Mills, in 1954 totaled \$99 million. This included shipments of primary products (thrown yarn), valued at \$41 million, shipments of secondary products valued at \$3 million, and receipts for commission work (throwing of yarn owned by others) of \$55 million.

Industry 2222 shipments of thrown yarn in 1954 represented 93 percent of its total product shipments (primary and secondary). On the basis of shipments of thrown yarn and receipts for commission throwing, the primary activity specialization ratio of Industry 2222 was 97 percent in 1954.

Industry 2222 shipments of thrown yarn in 1954 represented 79 percent of the thrown yarn, valued at \$52 million, shipped by all industries. This coverage ratio for 1947 is not available. A large quantity of thrown yarns is produced captively (for their own consumption) by establishments classified in other industries, principally Industry 2234, Synthetic Broad-Woven Fabrics. A breakdown of thrown yarn production classified by industry is not available. However, approximately 50 percent of all throwing and twisting spindles are located in plants with weaving equipment.

Generally the establishments in Industry 2222 are of two kinds (1) those which process on a commission basis yarns owned by others and (2) those which process their own yarns. ("Captive" establishments processing yarn for use in weaving or knitting mills owned by the same company were generally reported as processors of own yarn in the 1954 Census.) Commission throwsters and other commission processors excluded the value of the yarn processed, from both the "cost of materials" and the "products shipped" items. The total cost of materials for the industry therefore includes the cost of the yarn processed only for establishments processing yarn for their own account. The total value of shipments for the industry is a composite figure including, for commission processors, receipts for commission processing, and for other processors, the value of the finished yarn transferred or sold to other establishments. Value added by manufacture is, however, similar in concept for both types of establishments and comparable to the same figure for other industries. (See Introduction, Value Added by Manufacture.)

The sequence of operations involved in throwing silk or man-made yarns can only be given in general terms since there are many variable factors. The preparatory operations include reeling, soaking, tinting, extracting, and drying, followed by winding on spools suitable for twisting. Yarn on the supply packages (cones, cheeses, etc.) usually has a low twist ("producer's twist") as it comes from the man-made fiber plant. Throwing as performed by throwsters, consists essentially of imparting a higher twist to the yarn. After throwing, the yarn is conditioned to set the twist.

Winding and warping consists of transferring yarn from one type of package to another (the "package" in warping is a warp beam). Most of the rewinding in this industry is performed on a commission basis. No figures on the production of rewound yarn were collected in the Census; in the very few instances of establishments rewinding yarn for sale, the value of shipments was included in 2222098, "all other products." (See Table 6A.)

#### 2223--Thread Mills

This industry comprises establishments primarily engaged in manufacturing thread of cotton, wool, silk, rayon or other synthetic fibers. Important products of this industry include sewing, crochet, darning, embroidery, tatting, and hand-knitting threads. Establishments primarily engaged in finishing thread are also included in this industry. Establishments primarily engaged in manufacturing flax thread are included in Industry 2299, "Textile Goods, N.E.C.;" and cordage and twine in Industry 2298, "Cordage and Twine." For a detailed list of primary products of Industry 2223 refer to Table 6A product codes 2223111 to 2223298.

The value of shipments of Industry 2223, Thread Mills, in 1954 totaled \$184 million. This included shipments of primary products (thread) valued at \$158 million, shipments of secondary products (cotton system yarns and other products) of \$21 million, and miscellaneous receipts (principally receipts for mill waste) of \$5 million.

Industry 2223 shipments of thread in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947 this primary product specialization ratio was 85 percent.

Industry 2223 shipments of thread in 1954 represented 94 percent of the thread valued at \$167 million shipped by all industries. Included in this total is gray thread shipments transferred to other plants for finishing. This results in duplication in the value of thread shipments of approximately 18 percent (see Table 6A).

The principal material used in this industry is cotton, either in the form of raw cotton or of yarn; cotton accounts for over 95 percent of the thread produced. The remainder consists of small quantities of silk, nylon, and other man-made fibers.

2224--Yarn Mills, Cotton System (Part of Standard Industrial Classification Industry 2221, Yarn Mills, Cotton, Wool, Silk, and Synthetic Fiber)

This industry comprises establishments primarily engaged in the spinning of yarn on the cotton system from cotton, wool, silk, rayon, or other man-made staple fibers, or in the manufacture of tire cord and fabric. Establishments primarily engaged in twisting, winding, plying, or spooling of spun yarns are also included in this industry. Important products of this industry include weaving, machine-knitting, hand-knitting, crochet, darning and embroidery yarns; tire cord and fabric.

The 1947 Census definition of Industry 2224 has been changed in two respects for the 1954 Census. First, it now includes the few silk system yarn mills for which separate industry statistics were shown in 1947; according to information obtained in the 1954 Census, the spinning of fibers on the silk system is confined to a very few establishments in the United States. Secondly, it includes establishments primarily engaged in manufacturing tire cord and fabric, which were previously classified in Census Industry 2233, Cotton Broad-Woven Fabrics; this is in accordance with a recent amendment of the Standard Industrial Classification by the Bureau of the Budget. In accepting this revision the Bureau of the Budget recognized that tire cord and tire fabric are very similar products, usually made in the same mills. Tire cord "fabric" consists of plain tire cords loosely held in a flat sheet by means of light filling yarns widely spaced. These are inserted on a special loom. It is noted in textile reference works that tire cord "fabric" is not really a fabric in the ordinary sense; the "weaving" process could, in fact, be considered to be merely a special way of packaging tire cord. The 1947 data have been retabulated to reflect these changes in definition. For a detailed list of primary products of Industry 2224 in 1954, refer to Table 6A, product codes 2224111 to 2224398 and 2225011 to 2225078.

The value of shipments of Industry 2224, Yarn Mills, Cotton System, in 1954 totaled \$1,031 million. This included shipments of primary products (cotton yarn, spun man-made fiber yarn, and tire cord and fabric) valued at \$950 million, shipments of secondary products valued at \$49 million, and miscellaneous receipts (mainly mill waste and commission work on materials owned by others) of \$33 million.

Industry 2224 shipments of cotton system yarn mill products in 1954 represented 95 percent of its total product shipments (primary and secondary). Secondary products shipped by Industry 2224 in 1954 included cotton broad-woven fabrics, \$26 million; and finished yarn and raw stock, \$10 million.

Industry 2224 shipments of tire cord and fabric in 1954 represented 94 percent of the tire cord and fabric shipped by all industries. This coverage ratio for shipments of these product classes is practically identical with the coverage ratio for production because "captive" production (i.e., production within tire producing factories) is nonexistent. However, part of the shipments of tire cord and fabric are made by plants that are owned by the tire companies. Separate data are not available for the transfers from such plants as differentiated from sales of tire cord and fabric.

Shipments (including interplant transfers) of cotton system yarns by Industry 2224 in 1954 represented 92 percent of the total shipments of such products, valued at \$678 million, shipped by all industries. However, a major portion of the total production of yarns is never shipped, but is consumed in the producing establishment in the manufacture of woven fabrics. An approximation of this amount can be obtained from Table 6A by subtracting total shipments and interplant transfers from total production.

The data shown for shipments include transfers to other plants of the producing company and are not equal to shipments of sales yarn. In 1947 shipments of thrown and spun sales yarn was approximately 80 percent of total shipments including interplant transfers of such yarns. A breakdown of yarn production data showing production for sale and production for own use is shown in Table 6C.

The total production of yarn shown in this report does not include production by establishments classified as knitting mills, cordage and twine mills, and in some other industries not included in this bulletin. These establishments operated approximately 4 percent of all cotton-system spindles in 1954.

The processes performed in manufacturing cotton-system yarn are basically opening, picking, carding, combing (where required for combed yarn), drawing, roving, and spinning. Nearly all of the cotton-system yarn mills included in the industry are integrated in the sense that fiber preparation and spinning of yarn are performed in the same mill.

**2233--Cotton Broad-Woven Fabrics** (Part of Standard Industrial Classification 2231, Broad-Woven Fabric Mills, Cotton, Silk, and Synthetic Fiber)

This industry comprises establishments primarily engaged in weaving fabrics over 12" in width, of cotton or mixtures in which cotton is the principal fiber by weight. Important products of this industry include apparel fabrics, and mechanical and industrial fabrics of cotton; such as duck, osnaburgs, sheetings, print cloth, flannels, denims, shirtings, towelings, draperies and upholstery fabrics. Establishments primarily engaged in weaving cotton carpets and rugs are classified in Industry 2273, Carpets and Rugs, Except Wool.

Establishments weaving gray goods and further processing them into finished fabrics or fabricated textile products such as sheets, towels, bedspreads, etc., are classified in this industry.

In 1947, establishments primarily engaged in manufacturing tire cord and tire fabrics were classified in this industry. As a result of a recent amendment made by the Technical Committee of the Bureau of the Budget, such establishments are now classified in Industry 2224, Yarn Mills, Cotton System. The 1947 statistics have been retabulated to reflect this change in definition.

Changes in reporting of gray goods and finished goods shipments as discussed above affect the comparability of the product data. In addition, there was a change in reporting by some textile mills with fabricating departments. In 1947, separate reports were received for a number of such departments. These reports were usually classified in Industry 2392, Housefurnishings, N.E.C. In 1954 several of these departments were included in the textile mill report. This change increased the employment for Industry 2233 by an estimated 2-3 percent, and reduced the employment for Industry 2392 by more than 15 percent.

For a detailed list of primary products of Industry 2233, refer to Table 6A, product codes 2233111 to 2233898, 2261111 to 2261151, and 2392211 to 2392300.

The value of shipments of Industry 2233, Cotton Broad-Woven Fabrics, in 1954 totaled \$2,790 million. This included shipments of primary products (cotton broad-woven gray and finished fabrics, sheets, pillowcases, and towels) valued at \$2,549 million, shipments of secondary products valued at \$165 million, and miscellaneous receipts of \$76 million.

Industry 2233 shipments of its primary products in 1954 represented 94 percent of its total product shipments (primary and secondary). Secondary products shipped by Industry 2233 in 1954 included cotton system yarns, \$25 million, and rayon and related broad-woven fabrics, \$55 million.

Industry 2233 shipments of cotton broad-woven fabrics, sheets, pillow-cases, and towels, represented 84 percent of such products, valued at \$3,036 million, shipped by all industries.

An important characteristic of the industry is that most of the mills, particularly the large and medium-size mills, perform all stages of fabrication from raw fiber to woven fabric, including the processes of fiber preparation, spinning, spooling, warping, slashing, weaving, shearing, and inspecting. The finishing of yarn (bleaching, dyeing, mercerizing) before weaving is fairly common; some fabrics are also put through finishing processes (bleaching or dyeing) before they leave the mill. For the most part, however, fabric is shipped by the industry as gray or unfinished goods.

The extent of integration of some of these processes in individual mills is brought out in Table 9D, which shows by size of mill the number with weaving equipment only; with spinning and weaving equipment; with weaving and finishing equipment; and with spinning, weaving, and finishing equipment.

The principal purchased materials of the industry are cotton fiber and cotton yarn. As indicated in Table 7A relatively small amounts of other fibers and yarn (rayon, acetate, wool, etc.) are also consumed by the industry. The latter materials are used both in the production of cotton fabrics (i.e., mixtures in which cotton is the principal fiber) and in the "secondary" production of man-made fiber or woolen fabrics.

**2234--Synthetic-Broad Woven Fabrics** (Part of Standard Industrial Classification 2231, Broad-Woven Fabric Mills, Cotton, Silk, and Synthetic Fiber)

This industry comprises establishments primarily engaged in weaving fabrics over 12" in width of silk or man-made fibers, including mixtures in which those fibers are the principal fiber by weight. Paper and glass broad-woven fabrics are included in this industry. Important products of the industry include apparel fabrics, household fabrics, and industrial and mechanical fabrics of the specified fibers. For a detailed list of primary products of Industry 2234 refer to Table 6A, product codes 2234111 to 2234798.

Jobbers who do no manufacturing but consign yarn to commission mills for weaving were included in the data for this industry for 1947, but are excluded for 1954. Employment and payroll data for jobbers are negligible; data on shipments are more significant. However, since the overall industry statistics are believed to be substantially comparable between the two years, the 1947 data have not been retabulated by 1954 classifications.

The value of shipments of Industry 2234, Synthetic Broad-Woven Fabrics, in 1954 totaled \$1,143 million. This included shipments of primary products (silk and man-made fiber broad-woven fabrics) valued at \$955 million, shipments of secondary products valued at \$141 million, and miscellaneous receipts (mainly commission work on materials owned by others) of \$46 million.

Industry 2234 shipments of primary products in 1954 represented 87 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 85 percent. Secondary products shipped by Industry 2234 in 1954 consisted mainly of cotton broad-woven goods, \$89 million, and woolen and worsted goods valued at \$18 million.

Industry 2234 shipments of silk and man-made fiber broad-woven fabrics represented 90 percent of the total of such fabrics, valued at \$1,062 million, shipped by all industries. Other industries shipping synthetic broad-woven goods in 1954 included Industry 2233, Cotton Broad-Woven Fabrics, \$55 million.

The mills in Industry 2234 are mainly of three types with respect to processes employed: mills with spinning (or throwing), weaving and finishing equipment; those with spinning or throwing and weaving but no finishing equipment; and those with weaving equipment only.

Integration is important at the company level as well as at the mill level. The larger companies in the industry operate several fabric mills weaving man-made fibers, and also operate finishing plants classified in Industry 2261. Some also operate cotton mills, woolen and worsted mills, or knitting mills.

The extent of integration of processes in individual mills is shown in Table 9D, which shows by size of mill the number with weaving equipment only; with spinning or throwing and weaving equipment; with weaving and finishing equipment; and with spinning, throwing, weaving, and finishing equipment. Mills primarily engaged in spinning synthetic staple fibers are classified in Industry 2224, and those primarily engaged in throwing synthetic filament yarn in Industry 2222, while plants primarily engaged in dyeing or printing are classified in Industry 2261.

The principal materials used by Industry 2234 are filament yarns and man-made staple (either in the form of raw fiber or purchased spun yarn). Substantial changes which took place between 1947 and 1954 include increased use of rayon and acetate spun yarns, and of noncellulosic fibers (nylon, acrylic and polyester fibers, etc.) accompanied by a decrease in the use of rayon filament yarns.

**2241--Narrow Fabric Mills** (Full Standard Industrial Classification Title: Narrow Fabrics and Other Smallwares Mills: Cotton, Wool, Silk, and Synthetic Fiber)

This industry comprises establishments primarily engaged in weaving or braiding fabrics 12" or narrower in width of cotton, wool, silk, rayon, or other synthetic fibers. Establishments primarily engaged in weaving or braiding fabrics 12" or narrower in width of fabric-covered elastic yarn are also included in this industry. Important products of this industry include fabric belting (mechanical and apparel), ribbons, tapes, bindings and gimps, woven labels, hatbands, elastic and nonelastic webbing, covered rubber yarns and threads, and fabric lacings. For a detailed list of primary products of Industry 2241, see Table 6A, product codes 2241111 to 2241511.

The value of shipments of Industry 2241, Narrow Fabric Mills, in 1954 totaled \$250 million. This included shipments of primary products (narrow fabrics), valued at \$235 million, shipments of secondary products, valued at \$9 million, and miscellaneous receipts (mainly commission work on materials owned by others) of \$7 million.

Industry 2241 shipments of narrow fabrics in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 95 percent.

Industry 2241 shipments of narrow fabrics represented 94 percent of the narrow fabrics, valued at \$250 million, shipped by all industries. This coverage ratio in 1947 was 98 percent.

The operations performed in a typical narrow fabric mill include yarn preparation, weaving or braiding, and finishing (dyeing, printing, etc.). A few of the mills in the industry also spin yarn from cotton or synthetic staple for their own use. Practically all finishing of narrow fabrics is carried on in this industry.

As suggested in the industry description, Industry 2241 uses a wide variety of fibers. However, the manufacturers' records of production and sales generally do not distinguish between products by type of fiber employed; therefore, the detailed shipments figures in Table 6A, group all fibers under each product category. In Table 7A, however, the principal materials consumed (yarns) are shown by type of fiber.

2261--Finishing Textiles, Except Wool (Full Standard Industrial Classification Title: Dyeing and Finishing Textiles, Except Woolen and Worsted Textiles and Knit Goods).

This industry comprises establishments primarily engaged in bleaching, dyeing, printing, finishing or otherwise processing fabrics, yarn, or raw stock other than woolen or worsted. Plants primarily engaged in flocking or sueding of fabrics or printing or embossing on plastic are also included in this industry. Establishments primarily engaged in dyeing or finishing knit goods are classified in Industry Group 225, Knitting Mills; and in finishing woolen and worsted goods, in Industry 2216, Finishing Wool Textiles (Census equivalent of Standard Industrial Classification Industry 2262). The sponging and shrinking of cloth is included in Industry 2399, Fabricated Textile Products, N.E.C.

Establishments manufacturing basic textiles (yarn or fabric) are classified as yarn mills or woven fabric mills, Industries 2222, 2224, 2233, or 2234, even though all or a part of the shipments consist of finished products. This practice differs from that employed for most industries, where the primary product shipped determines the industrial classification. The exception was made here in the Standard Industrial Classification because in an integrated mill the basic textile operation usually constitutes the primary activity, in terms of labor and capital input.

The extent to which finished fabrics are shipped by weaving mills is indicated in Table 5B. In addition Table 9D shows the number of weaving mills operating finishing equipment.

The value of shipments of Industry 2261, Textile Finishing, Except Wool, in 1954 totaled \$998 million. This consisted of shipments of primary products (finished fabrics and yarn) valued at \$343 million, shipments of secondary products valued at \$54 million, and miscellaneous receipts (mainly commission work on materials owned by others) of \$602 million.

Industry 2261 shipments of primary products in 1954 represented 86 percent of its total product shipments (primary and secondary). This primary product specialization ratio, including commission finishing receipts, was 95 percent in 1954.

Industry 2261 shipments of primary products (finished textiles, except wool) in 1954 represented 41 percent of these products, valued at \$844 million, shipped by all industries. Weaving mills (Industries 2233 and 2234) were the principal other industries shipping finished textiles.

The establishments in this industry are of two types (1) those which process on a commission basis materials owned by others and (2) those which process their own materials. "Captive" plants finishing goods for integrated weaving companies were generally reported as commission finishers in the 1954 Census. Commission dyers and other commission finishers were instructed to exclude the value of the material processed (fiber, yarn, or fabric) in both the "cost of materials" and the "products shipped" items. The total cost of materials for the industry therefore includes the cost of the goods finished only for establishments finishing for their own account. The "total value of shipments and receipts" of the industry is a composite figure including (for commission finishers) receipts for finishing and (for independent finishers) the value of the finished goods shipped or sold. In the 1947 Census of Manufactures, an attempt was made to resolve this problem by requesting independent finishers to report as "shipments" the "value added by finishing"--i.e., the margin between the cost of the gray goods and the value of the finished goods. This method was not employed in the 1954 Census, because the 1947 experience indicated the plan was not practical.

A substantial amount of fabric is finished on commission for the account of "converters" who buy gray goods from the weaving mills, arrange to have the finishing done, and sell the finished cloth in the apparel or other markets. While the fabric is owned by the converter, the commission finisher usually supplies the dyestuffs and miscellaneous materials which are included in his receipts for finishing.

Since the converter usually owns no manufacturing facilities, his establishment is classified in the wholesale trade industries and was excluded from the Census of Manufacturers. However such establishments did report in the 1954 Census of Business. In that Census there were 587 establishments reporting sales of piece goods converted for them by manufacturing establishments. The total sales of these establishments in 1954 was \$1,012 million which included \$884 million of converted piece goods. Approximately 94 percent of this latter figure represented sales from establishments located in New York State. The converters' sales figure of \$1,012 million does not include the sales reported by offices operated by large integrated textile companies, which were classified in the 1954 Census of Business as "manufacturers' sales offices."

The plants included in Industry 2261 fall into three broad categories; cotton bleaching and dyeing, synthetic and silk dyeing, and printing (roller, screen or block). These processes are usually not performed in the same plant. Textiles may be dyed at four different stages: (a) during the formation of the fiber (man-made fibers only), (b) as a staple fiber before being made into yarn, (c) as yarn, and (d) as a fabric. Dyeing is most common in the fabric stage; printing, except for an insignificant amount of novelty yarn printing, is performed only on fabric.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## COTTON, RAYON AND RELATED MANUFACTURES

22B-5

Table 1.--GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS  
(For explanation of column captions see Introduction)

Industry and census year	Establish- ments, number	All employees		Production workers		Value added by manufacture <sup>2</sup>	Cost of materials, etc.	Value of shipments <sup>3</sup>
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Yarn throwing mills (S.I.C. 2222):								
1954 <sup>4</sup>	137	11,840	32,046	10,849	26,790	53,964	45,263	99,227

1937 <sup>13</sup>	442	(NA)	(NA)	61,552	64,220	116,458	88,633	205,091

NA Not available. <sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October). <sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Narrow fabric mills" industry, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years. <sup>3</sup>For 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments." <sup>4</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table. <sup>5</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$438.3 million for "Cotton broad-woven fabrics" and \$45.4 million for "Narrow fabric mills." No comparable figures are available for earlier years for "Yarn throwing mills," and "Thread mills." <sup>6</sup>Although Census industry definitions correspond to the Standard Industrial Classification, some of the industries have been renumbered and regrouped to provide totals for cotton and related manufactures. The Census industry code numbers, titles and their corresponding S.I.C. numbers are as follows:

S.I.C. Number	Title	Census Number
2221	Yarn mills, cotton system	2224
	Yarn mill, wool systems, except carpet	2212
	Cotton broad-woven fabrics	2233
2231	Synthetic broad-woven fabrics	2234

<sup>7</sup>Industry 2224, "Yarn mills, cotton system" includes establishments primarily producing yarns on the silk system (formerly Industry 2225). Data for 1947 have been retabulated to include establishments primarily producing tire cord and tire fabrics. The figures for other years could not be revised and, therefore, have been omitted. <sup>8</sup>The 1947 figures have been revised for comparability with 1954 by excluding data for establishments primarily engaged in manufacture of tire cord and tire fabrics. The figures for other years could not be revised and, therefore, have been omitted. <sup>9</sup>The figures for Synthetic broad-woven fabrics for 1937, 1939 and 1947-1954 relate to establishments primarily producing fabrics over 12 inches in width, whereas the figures for 1935 relate to establishments primarily producing fabrics 18 inches and over in width. Data for dyeing and finishing departments of integrated rayon and silk broad-woven fabric mills are included in the figures for 1937-1954 but not for 1935. Value added for 1937 on a basis comparable with 1935 was \$104.8 million. <sup>10</sup>Synthetic broad-woven fabrics and "Narrow fabric mills" were formerly included in the discontinued classifications "Silk and rayon goods" and "Cotton smallwares." Separate figures are, therefore, not available for years prior to 1935. <sup>11</sup>The figures for "Narrow fabric mills" for 1937, and later years relate to mills primarily producing fabrics 12 inches and under in width. The figures for 1935 relate to silk and rayon mills primarily producing fabrics under 18 inches in width and cotton mills primarily producing fabrics 12 inches and under in width. Value added for 1937 on a basis comparable with 1935 was \$39.8 million. <sup>12</sup>Not comparable with data for other years. See Introduction. <sup>13</sup>No comparable data available for earlier years.

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2222, Yarn Throwing Mills: New England—Massachusetts, 3 (250-499); Rhode Island, 6 (100-249); Connecticut, 1 (20-99); All Other Divisions—Illinois, 1 (100-249); Maryland, 1 (20-99); South Carolina, 3 (250-499); Georgia, 2 (20-99); Tennessee, 4 (500-999); Mississippi, 1 (20-99); California, 1 (20-99).

S.I.C. 2223, Thread Mills: New England—New Hampshire, 2 (20-99); Massachusetts, 14 (500-999); Rhode Island, 6 (250-499); Middle Atlantic—New Jersey, 3 (1-19); Pennsylvania, 5 (100-249); East North Central—Ohio, 2 (1-19); Illinois, 2 (1-19); South—Maryland, 1 (1-19); South Carolina, 1 (500-999); Georgia, 8 (2,500-4,999); Tennessee, 2 (1,000-2,499).

S.I.C. 2224, Yarn Mills, Cotton System: New England—Maine, 1 (250-499); New Hampshire, 2 (100-249); Connecticut, 4 (100-249); Middle Atlantic—New Jersey, 12 (100-249); Pennsylvania, 9 (500-999); All Other Divisions—Ohio, 2 (1,000-2,499); Illinois, 1 (100-249); Virginia, 2 (250-499); Kentucky, 1 (250-499); Arkansas, 1 (100-249); Texas, 2 (1-19); California, 2 (100-249).

S.I.C. 2233, Cotton Broad-Woven Fabrics: New England—Vermont, 1 (250-499); Rhode Island, 15 (2,500-4,999); All Other Divisions—Ohio, 3 (1-19); Indiana, 1 (100-249); Illinois, 9 (100-249); Michigan, 2 (1-19); Wisconsin, 2 (100-249); Maryland, 2 (500-999); Virginia, 9 (10,000 or more); Florida, 3 (20-99); Kentucky, 1 (250-499); Tennessee, 5 (2,500-4,999); Alabama, 37 (10,000 or more); Mississippi, 3 (1,435); Arkansas, 5 (1,151); Louisiana, 1 (1,000-2,499); Oklahoma, 1 (1,000-2,499); Texas, 18 (5,000-9,999); Utah, 1 (20-99).

S.I.C. 2234, Synthetic Broad-Woven Fabrics: North Central—Ohio, 2 (20-99); Indiana, 1 (20-99); Illinois, 2 (100-249); Iowa, 1 (1-19); Missouri, 1 (500-999); South and West—Maryland, 1 (500-999); Virginia, 18 (5,000-9,999); Florida, 1 (1-19); Tennessee, 3 (1,000-2,499); Alabama, 1 (1,000-2,499); Texas, 1 (20-99); California, 2 (20-99).

S.I.C. 2241, Narrow Fabric Mills: New England—Maine, 2 (1-19); Rhode Island, 63 (2,500-4,999); North Central—Illinois, 6 (250-499); Wisconsin, 3 (20-99); Missouri, 2 (100-249); South Atlantic—Maryland, 6 (250-499); West Virginia, 1 (100-249); Florida, 2 (100-249); East South Central—Kentucky, 3 (100-249); Tennessee, 3 (100-249); Pacific—Oregon, 1 (1-19); California, 5 (20-99).

S.I.C. 2261, Finishing Textiles, Except Wool: New England—New Hampshire, 6 (500-999); Vermont, 1 (1-19); East North Central—Ohio, 7 (250-499); Michigan, 1 (100-249); Wisconsin, 2 (1-19); South—Delaware, 1 (1,000-2,499); Maryland, 3 (100-249); West Virginia, 1 (250-499); Florida, 2 (1-19); Kentucky, 3 (100-249); Arkansas, 1 (1-19); Texas, 2 (1-19); West—Wyoming, 1 (1-19); Colorado, 1 (1-19); Washington, 1 (1-19); California, 17 (250-499).

Table 3.--DETAILED STATISTICS FOR THE UNITED STATES: 1954

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 92%. The column for establishments with 90% or more primary product specialization is not shown for Industry 2261 because of the high proportion of commission receipts which did not enter into the computation of the specialization ratio for individual establishments. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than \$5 thousand. <sup>4</sup>Less than 500 hp.

## MANUFACTURES--INDUSTRY STATISTICS

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>If miscellaneous receipts are included in the numerator and denominator of this calculation, specialization would be 95 percent.

## COTTON, RAYON AND RELATED MANUFACTURES

22B-11

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

xxx Not applicable.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> Includes receipts for contract and commission work not specified by kind.<sup>3</sup> Of this figure, 84 percent consists of the following product classes: 22120, Yarns spun on woolen systems, except carpet; 22613, Finished yarns and raw stock, except wool; and 23960, Trimmings, stamped art goods, and art needlework.<sup>4</sup> Establishments classified in Industries 2223, Thread mills; 2224, Yarn Mills, Cotton System; 2233, Cotton Broad-Woven Fabrics; and 2234, Synthetic Broad-Woven Fabrics, were requested to report detailed data regarding sales of mill waste. These mills reported the following information:

Item	Total shipments and interplant transfers	
	Quantity (1,000 lbs.)	Value (\$1,000)
Mill waste and other scrap, total.....	xxx	87,609
Cotton waste:		
Card strips.....	115,033	25,339
Comber noils.....	76,490	19,002
Other soft wastes (including sweeps, motes, and files).....	231,368	13,410
Hard wastes (thread and yarn wastes).....	65,337	6,867
Rayon and other man-made fiber wastes:		
Thread or yarn waste.....	15,089	1,595
New rags and clips.....	1,939	408
Other mill waste.....	94,761	5,934
Other salable scrap including mill waste not specified by kind.....	xxx	15,054

<sup>4</sup> Less than \$100 thousand.<sup>5</sup> Of this figure, 57 percent consists of the following product classes: 22331, Cotton duck and allied fabrics; 22343, 100% spun rayon and/or acetate fabrics; 22413, Woven narrow fabrics, except elastic.<sup>6</sup> Includes \$193,707 thousand shipped by Industry 2261, Finishing Textiles, Except Wool.<sup>7</sup> Includes \$73,550 thousand shipped by Industry 2392, Housefurnishings, N.E.C.<sup>8</sup> Includes \$51,138 thousand shipped by Industry 2392, Housefurnishings, N.E.C.<sup>9</sup> Includes \$30,225 thousand shipped by Industry 2261, Finishing Textiles, Except Wool.<sup>10</sup> Of this figure, 92 percent consists of the following product classes: 22120, Yarns spun on woolen system, except carpet; 22220, Thrown yarns; 22331, Cotton duck and allied fabrics; 22334, Cotton colored yarn fabrics; and 22561, Warp knit fabrics.<sup>11</sup> Includes \$9,937 thousand shipped by Industry 2224, Yarn mills, Cotton System.<sup>12</sup> Of this figure, 89 percent consists of the following product classes: 22250, Yarns spun on silk system; 22992, Textile goods, n.e.c.; 23922, Sheets and pillow cases; 23990, Fabricated textile products, n.e.c.; and 38422, Surgical and orthopedic appliances and supplies.

NA Not available.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Made in own plant.<sup>2</sup>The difference between (1) total production for all purposes and (2) the sum of production on commission plus shipments and interplant transfers approximates production for use in the same establishment.<sup>3</sup>For 1947, represents sales yarn shipments, only; for 1954, includes transfers from yarn mills to affiliated weaving or knitting mills. The value of all sales yarn spun and thrown is estimated for 1947 at about 80 percent of the total value including transfers. The shipment figures for the two years are therefore not comparable. Production statistics are comparable for both years.<sup>4</sup>Does not include production for own use in knitting mills, narrow fabric mills, and cordage and twine mills.<sup>5</sup>Primarily value of spun yarns rewound but not manufactured in the reporting establishment. Not included in 1947 data.<sup>6</sup>In 1947, production of nylon tire cord and tire cord fabric was included with rayon.<sup>7</sup>A small quantity of rayon chafer fabric, code 2224398, is included with code 2224331.<sup>8</sup>Code 2223259 is combined with code 2223219.<sup>9</sup>Laundry netting is reported in thousands of pounds. Quantity data are not include in any totals.<sup>10</sup>Code 2233262 is combined with code 2233298.<sup>11</sup>Sheeting yarn fabrics, 56 square and finer.<sup>12</sup>Does not include fine carded marquisettes.<sup>13</sup>In 1947 manufacturers reported pounds of production for only those fabrics made from own materials. On the basis of that information, pounds have been estimated for total production including the amount produced on commission.<sup>14</sup>Includes a substantial quantity of finished fabrics reported at their gray goods value.<sup>15</sup>Wool mixtures, 25 to 50% wool, were included with wool fabrics, code 2213, in 1947.<sup>16</sup>In 1947, rayon mixtures, code 2234651, were included with code 2234798. Therefore, 1954 and 1947 data for product classes 22346 and 22347 are not comparable by an unknown amount (presumably small).<sup>17</sup>Inasmuch as each mill reported only the total quantity and value of "all other woven fabrics," it is not feasible to effect a precise unit-price breakdown of these data. The value breakdown is based on the average unit value of all such fabrics reported by each mill.<sup>18</sup>Does not include open-mesh bagging made and used in bag plants.<sup>19</sup>Value of elastic braided narrow fabrics, code 22412, is included with code 22411.<sup>20</sup>Includes 13,866,000 yards of rayon fabrics described as "over 1 1/2 inches in width."<sup>21</sup>Braided narrow fabrics, except elastic, code 22414 and detail are included with code 22413. Woven narrow fabrics, except elastic.<sup>22</sup>Includes vulcanizing type.<sup>23</sup>The production data for broad woven fabric include the quantity finished by commission finishers for the account of textile converters; the shipments figures, however, do not include shipments of goods owned by converters (see text). 1947 shipments data are not available.<sup>24</sup>Although these figures were called for on the Census questionnaire, it is believed that a substantial part of the captive production was not reported.<sup>25</sup>Includes plastic film printed on textile printing equipment.<sup>26</sup>Includes narrow fabrics finished in the "Finishing Textiles, Except Wool, Industry."<sup>27</sup>Data for 1947 are not comparable with 1954 information because a number of textile mills producing sheets and pillowcases in 1947 reported them as shipments of gray broad woven fabrics, code 22333.

## COTTON, RAYON AND RELATED MANUFACTURES

22B-23

Table 6B.--VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States, listed but the exact figures are withheld to avoid disclosure of individual company figures: 22220, Rhode Island, Virginia, South Carolina, and Georgia; 22242, Maine, New Hampshire, Rhode Island, Illinois, Maryland, Virginia, Kentucky, Arkansas, and California; 22241, North Carolina, South Carolina, and Tennessee; 22243, New York, Pennsylvania, Ohio, Virginia, North Carolina, South Carolina, Tennessee, and Alabama; 22331, Connecticut, Maryland, and North Carolina; 22332, Maine, Virginia, North Carolina, Tennessee, Alabama, Mississippi, Arkansas, and Texas; 22333, New Hampshire, Massachusetts, Virginia, Georgia, Tennessee, and Alabama; 22334, Virginia, Mississippi, Louisiana, and Texas; 22336, Maine, New Hampshire, Alabama, and Texas; 22337, Maine, Vermont, Rhode Island, Pennsylvania, Virginia, and Georgia; 22338, Maine, New Hampshire, Illinois, Maryland, Virginia, Kentucky, Alabama, Arkansas, and Texas; 22341, Rhode Island, and Georgia; 22342, Maine, Connecticut, Georgia, and Tennessee; 22343, New Hampshire and Tennessee; 22344, Maine, New Hampshire, and Pennsylvania; 22345, Virginia; 22346, Maine, Connecticut, and Alabama; 22347, Michigan, Missouri, Tennessee, and Alabama; 22413, Ohio, West Virginia, Georgia, and Alabama.

<sup>2</sup>The published data for 1947 represent sales yarn only and do not include interplant transfers of thrown and spun yarns.

<sup>3</sup>Data for years prior to 1954 include the gray goods value for fabrics sold as finished goods, and in some cases as fabricated goods. They are therefore, not comparable to the 1954 information.

<sup>4</sup>In 1947, nylon mixtures were included in product class 22347.

222161	Other yarns.....	4,617	7,918
970000	All other materials, containers, and supplies consumed, including materials etc., not specified by kind.....	xxx	38,139

xxx Not applicable.

<sup>1</sup>Consumption of yarns in the Cotton broad-woven fabrics industry (2233) and Synthetic broad-woven fabrics industry (2234) are based on quarterly reports received on Census Form ML5T "Broad-woven Fabrics." Industry classification for this table was based on production of broad-woven fabrics as reported on that form.

## MANUFACTURES--INDUSTRY STATISTICS

Table 7B.—CONSUMPTION OF RAW COTTON BY INDUSTRY AND STATE  
(Domestic cotton in running bales: foreign cotton in 500-lbs equivalent gross bales)

Division and state	Total, all industries	Industry and industry group							
		Thread mills (S.I.C. 2223)	Yarn mills, cotton system (Census Code 2224 <sup>§</sup> )	Cotton broad- woven fabrics (Census Code 2233)	Synthetic broad-woven fabrics (Census Code 2234)	Knitting mills (S.I.C. 2251-9)	Miscellaneous textile goods (S.I.C. 2291-9)	Household furniture (S.I.C. 2511-9)	All other industries

California.....									

Note: These data are based on monthly reports on Census Form M15P. Individual states are shown where total consumption was over 3,000 bales. Where the data are withheld to avoid disclosing information for individual companies, the figures shown below have been used to indicate consumption-size ranges:

<sup>1</sup>Less than 1,000 bales.

<sup>2</sup>1,000 to 9,999 bales.

<sup>3</sup>10,000 to 24,999 bales.

<sup>4</sup>25,000 or more bales.

<sup>§</sup>Includes some establishments classified in Industry 2298, Cordage and Twine.

## COTTON, RAYON AND RELATED MANUFACTURES

22B-27

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2223	THREAD MILLS (entire industry).....	97	13,908	38,281	12,221	22,807	29,267	62,694	121,052	183,746

D Data withheld to avoid disclosing information for individual companies.

<sup>1</sup>Degree of integration determined by type of machinery reported.<sup>2</sup>Some cotton or rayon mills included in this category reported woolen or worsted spindles, but no cotton or silk system spindles. Woolen and worsted spindles are not included in this table.<sup>3</sup>Less than 500 spindles.

## Knitting Mills

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2251--	Full-Fashioned Hosiery Mills
2252--	Seamless Hosiery Mills
2253--	Knit Outerwear Mills
2254--	Knit Underwear Mills
2255--	Knit Glove Mills
2256--	Knit Fabric Mills
2259--	Knitting Mills, Not Elsewhere Classified

Establishments were classified in these industries provided they were primarily engaged in making the specified products from yarns knitted in the same establishments, or were primarily engaged in the dyeing or finishing of hosiery or other knitted fabrics. In addition, these industries also include establishments which employ commission knitters and finishers to make products for their account and establishments which knit or finish on a commission basis for other establishments. Establishments making similar products, such as knit outerwear and underwear, on a cut-and-sew basis from fabrics knit in other establishments are not included in these industries. Such non-integrated plants are included in the statistics for Major Group 23, Apparel and Related Products. Thus, products which are primary to S.I.C. Group 225, are also treated as primary to industries in Major Group 23. This results, particularly in the case of Industries 2253, 2254, and 2255, in a somewhat less than usual degree of comparability between the industry statistics shown in Tables 1-4 and the detailed product information shown in Table 6A. The extent to which the industry and commodity statistics overlap for each of these industries is shown below in the discussion for the specific industries.

As indicated above, three types of establishments operate in Industry Group 225, Knitting Mills: (1) establishments making products from yarns knit in the same establishments and establishments dyeing and finishing hosiery or knitted products for their own account ("manufacturers"), (2) establishments knitting or finishing hosiery and other knitted products for the account of others ("contractors"), and (3) establishments who

act as "converters" of hosiery and other knitted products in that they purchase the yarns or greige goods and employ, "contractors" to process the materials for their account. The "converters" primarily perform the entrepreneurial functions of a manufacturing company, such as buying raw materials, arranging for the knitting and finishing, and selling the final product. The actual processing of the yarns into the final product is performed on contract by the "contractor" or commission knitter and finisher. Establishments which are primarily wholesalers or dealers in that they purchase and resell knitted products but do not perform the functions of the knitting mill converter are classified in Wholesale Trade. The 1945 edition of the Standard Industrial Classification has been amended by the Bureau of the Budget by the transfer of the knitwear converter from the Wholesale Trade to Manufacturing. The knitwear converters were included in manufacturing in earlier censuses and the data are therefore comparable for all years.

In reporting on the Census of Manufactures questionnaires, the "manufacturers" show figures on employment, cost of raw materials, and value of products made and sold. The knitwear "converters" report data comparable to the "manufacturers" on the cost of raw materials and the value of products, but employ relatively few workers at their establishments. The labor costs incurred in producing garments are included by the "converters" in cost of contract work. The value added by manufacture shown for the knitwear "converter," as for all other manufacturing industries, exclude the cost of contract work as well as the cost of materials. The "contractors," on the other hand, report their employment and receipts for contract work rather than the value of the final products. These contract plants do not report the cost of materials which they process but report only the cost of their own operating supplies.

In order to point up the significant differences in the relationship between wages and salaries paid, the cost of materials, the value of products, and value added by manufacture for the three types of establishment, plants were classified by their primary method of operations as "manufacturer," "converter," or "contractor." The table below provides comparative data for each of the three types of establishments included in the industries covered by this report.

### SUMMARY STATISTICS FOR KNITTING MILLS, S.I.C. Group 225, BY TYPE OF ESTABLISHMENT: 1954

(In thousands of dollars, except for ratios)

Item	Total	Manufacturers	Converters	Contractors
Value of products, including miscellaneous receipts.....	<sup>1</sup> 2,156,615	1,742,856	288,086	<sup>2</sup> 125,673
Costs of materials, fuels, electricity and contract work.....	<sup>1</sup> 1,218,480	964,960	220,587	32,933
Cost of materials, etc., excluding contract work.....	1,105,230	934,502	141,269	29,459
Cost of contract work <sup>3</sup> .....	113,250	30,458	79,318	3,474
Value added by manufacture.....	938,130	777,892	67,501	92,737
Wages and salaries paid.....	597,314	508,845	26,478	61,991
Ratio of wages and salaries to value added by manufacture.....	.64	.65	.39	67

<sup>1</sup>Contains from 10-20 percent overstatement because it includes: (1) semi-finished products as well as finished products and (2) receipts for contract and commission work which are also reflected in the value of finished products.

<sup>2</sup>Represents primarily receipts for contract and commission work on materials owned by others.

<sup>3</sup>Contains from 5-10 percent overstatement because of the inclusion of the cost of semi-finished goods as well as the cost of yarns from which such goods were made.

In this connection it should be noted that establishments in these industries may also employ more than one method of operating. For example, some establishments will operate as both a manufacturer and converter, or as both a manufacturer and contractor. In assigning the primary method of operation classification to manufacturer-converter plants, the relationship between wages and salaries paid to the cost of contract work was used. If wage and salary payments exceeded contract payments, the plant was classified as a "manufacturer"; if the contract payments exceeded the wage and salary payments, the plant was classified as a "converter." Similarly for manufacturer-contractor plants, the value of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

It should be noted that the relative importance of the three types of establishments varies significantly among the industries included in S.I.C. Group 225. For this reason, in this report separate statistics by type of establishment are shown only for Industry 2253, Knit Outerwear Mills, and Industry 2256, Knit

Fabric Mills; in the case of the other industries, practically all establishments operate as "manufacturers."

Although similar data by type of establishment for 1947 are not readily available, it is believed that there has not been any substantial shift between 1947 and 1954 in the relative importance of methods of operation; data for 1939 and earlier years are shown in Vol. II, Part I, of the 1939 Census of Manufactures.

As indicated above, some items of knit apparel are made in establishments classified in S.I.C. Group 225, Knitting Mills, as well as in establishments making similar products on a cut-and-sew basis from fabrics knit in other establishments. The latter type of establishments are classified in Major Group 23, Apparel and Related Products. Such products, however, are considered primary to both types of industries. The table shown below, summarizes the 1954 data for such products, showing the proportions made in each group. In addition, separate figures are shown on the output of similar products made from woven fabrics which are primary to Major Group 23 only.

SELECTED APPAREL PRODUCT CLASSES PRIMARY TO TWO OR MORE INDUSTRIES, BY INDUSTRY GROUP: 1954

Code	Product class	Total value of production (\$1,000)	Percent made in

	Woven fabrics.....	54,657	...	100
	Fabric not specified.....	1,842	...	...

<sup>1</sup>Includes cloth hats and caps made in Industry Group 228, Hats (Except Cloth and Millinery).

The Bureau of the Census publishes current production data in the Facts For Industry series on the products of five of the seven industries covered in this report. They are Facts For Industry release, M67C, Knit Underwear and Nightwear (quarterly); M67G, Knit Outerwear (annual); M67D, Gloves and Mittens (annual); and M15K, Knit Cloth For Sale (annual). In addition, monthly figures on the shipments of men's and women's sweaters are contained in Facts For Industry series, M67B, Men's Apparel, and M67H, Women's, Misses' and Juniors' Apparel. Monthly figures on the cuttings of women's slips are also shown in the latter publication.

The 1954 Census figures shown in Table 6A of this report may differ from the sum of the 1954 monthly of quarterly estimates shown in the Facts For Industry reports M67B, M67C, and M67H, primarily due to differences in reporting by the same respondents on the current and census questionnaires, and to some extent to the effect of sampling variations in the current estimates. In addition, it should be noted that some manufacturers in reporting for the 1954 Census did not adequately describe the specific garments which they made, or reported value only. The value of such output is shown in Table 6A, under the several categories for "Not specified by kind," or "Quantity not reported." The 1954 Census statistics on number of garments made do not, of course, include the output represented by such values.

#### 2251--Full-Fashioned Hosiery Mills

This industry comprises establishments primarily engaged in knitting, dyeing and finishing full-fashioned hosiery. Establishments seaming and looping full-fashioned hosiery are also included in this industry. For a detailed list of primary products of Industry 2251 refer to Table 6A, product codes 2251111 to 2251231.

Figures on the total cost of materials and value of shipments of Industry 2251, Full-Fashioned Hosiery Mills have not been published because they contain a high percentage of duplication. The value of hosiery shipped in the greige would, in effect, be counted twice; once as a shipment of the establishment producing greige goods to the dyeing and finishing plant and once more in the value of finished hosiery shipped by the dyeing and finishing plant. Similarly, the cost of materials figures would also be overstated. For this reason, therefore, the primary product specialization ratio could not be computed precisely for this industry. This ratio is, however, quite high (over 90) in both 1954 and 1947 since the value of secondary products shipped by the industry (principally seamless hosiery) was low compared to the value of its primary products (finished full-fashioned hosiery, and full-fashioned hosiery shipped in the greige).

Because of this duplication in the value of the primary products of Industry 2251, Full-Fashioned Hosiery Mills, the coverage ratio also cannot be precisely computed. However, for both 1954 and 1947, it is quite high (over 90) since only a small amount of these products were reported by plants classified in other industries.

#### 2252--Seamless Hosiery Mills

This industry comprises establishments primarily engaged in knitting, dyeing or finishing seamless (circular knit) hosiery. The principal products of this industry are seamless hosiery, finished or sold as greige goods, including anklets, slipper socks, pads, and athletic socks. For a detailed list of primary products of Industry 2252, refer to Table 6A, product codes 2252111 to 2252451.

The value of shipments of Industry 2252, Seamless Hosiery Mills, in 1954 totaled \$429 million. This included shipments of primary products (seamless hosiery) valued at \$402 million, shipments of secondary products valued at \$15 million and miscellaneous receipts (mainly contract knitting, dyeing or finishing seamless hosiery owned by others) of \$12 million.

Industry 2252 shipments of seamless hosiery in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was also 96 percent. Secondary products shipped by Industry 2252 in 1954 consisted mainly of full-fashioned hosiery, \$7 million, and knit yarns spun on the cotton system, \$2 million.

Industry 2252 shipments of seamless hosiery represented 93 percent of these products, valued at \$430 million shipped by all industries. This percentage in 1947 was 91 percent. The other

principal industry shipping seamless hosiery in 1954 was Industry 2251, Full-Fashioned Hosiery Mills, \$24 million.

As described above for Industry 2251, but to a lesser extent, there is also some overstatement in the figures shown for total value of shipments and total cost of materials for the seamless hosiery industry which are brought about by the same factors. The duplication in the total value of shipments of Industry 2252 caused by the inclusion of data on greige goods and receipts for contract work was approximately 10 percent in 1954 as compared with approximately 8 percent in 1947. In the case of total cost of material, the overstatement in the 1954 data was less than 10 percent.

#### 2253--Knit Outerwear Mills

This industry comprises establishments primarily engaged in knitting outerwear, or in manufacturing outerwear from knit fabric produced in the same establishment. Establishments primarily engaged in hand knitting outerwear for the trade are included in this industry. Important products of this industry include sweaters, bathing suits, dresses, and headwear. Establishments primarily engaged in manufacturing gloves and mittens are classified in Industry 2255, Group 238, or Group 315, and those manufacturing outerwear from woven fabric or purchased knit fabric in Major Group 23, Apparel and Related Products. For a detailed list of primary products of Industry 2253, refer to Table 6A, product codes 2253111 to 2253355, and also selected product codes in the 23--series shown under the Knit Outerwear Mills products groupings.

The value of products of Industry 2253, Knit Outerwear Mills, in 1954 totaled \$544 million. This included output of primary products (knit outerwear), valued at \$434 million, production of secondary products valued at \$33 million, and miscellaneous receipts (mainly knitting on materials owned by others) of \$77 million.

Industry 2253 output of knit outerwear in 1954 represented 93 percent of its total production (primary and secondary). In 1947, this primary product specialization ratio was 91 percent. Secondary products made by Industry 2253 in 1954 consisted mainly of men's and boys' underwear, \$7 million, and circular knit fabrics, \$6 million.

Industry 2253 output of knit outerwear in 1954 represented 65 percent of these products, valued at \$666 million, produced by all industries. The coverage ratio in 1947 was 82 percent. Other industries producing knit outerwear consisted mainly of Industry 2321, Men's Dress Shirts and Nightwear, \$29 million; Industry 2339, Women's Outerwear, N.E.C., \$75 million; and Industry 2369, Children's Outerwear, N.E.C. \$37 million. As indicated above, knit outerwear is also primary to industries in Major Group 23, Apparel and Related Products, when made on a cut-sew-basis from fabrics knit in other establishments. This accounts for the somewhat lower than usual coverage ratio for Industry 2253.

#### 2254--Knit Underwear Mills

This industry comprises establishments primarily engaged in knitting underwear and nightwear, or in manufacturing underwear and nightwear from knit fabric produced in the same establishment. Establishments primarily engaged in manufacturing underwear and nightwear from woven fabric or purchased knit fabric are classified in Major Group 23, Apparel and Related Products. For a detailed list of primary products of Industry 2254, refer to Table 6A, product codes 2321261 to 2321271; 2322021 to 2322071; 2341131 to 2341189; and 2341251 to 2341289.

The value of products of Industry 2254, Knit Underwear Mills, in 1954 totaled \$256 million. This included output of primary products (knit underwear) valued at \$222 million, production of secondary products valued at \$32 million, and miscellaneous receipts of \$3 million.

Industry 2254 output of knit underwear in 1954 represented 88 percent of its total products made (primary and secondary). In 1947, this primary product specialization ratio was 87 percent. Secondary products made by Industry 2254 in 1954 consisted principally of knit outerwear sport shirts, \$20 million.

Industry 2254 production of knit underwear in 1954 represented 39 percent of these products, valued at \$575 million produced by all industries. This coverage ratio in 1947 was 70 percent. Other industries shipping knit underwear consisted

mainly of Industry 2341, Women's and Children's Underwear, Industry 2322, Men's and Boys' Underwear, and Industry 2253, Knit Outerwear.

The decrease of 31 percentage points in the coverage ratio between the two years reflects the sharp increase by 1954 in the output of these products on a cut-and-sew basis from fabrics knit in other establishments. As indicated above, knit underwear is also primary to industries in Major Group 23, Apparel and Related Products which accounts for the relatively low coverage ratio for the output of these products by Industry 2254.

#### 2255--Knit Glove Mills

This industry comprises establishments primarily engaged in knitting or crocheting gloves and mittens, or in manufacturing gloves and mittens from knit fabric produced in the same establishment. Establishments primarily engaged in manufacturing gloves and mittens from purchased knit fabric are classified in Group 238, Miscellaneous Apparel. For a detailed list of primary products of Industry 2255, refer to Table 6A, product codes 2381011 to 2382071.

The value of products of Industry 2255, Knit Glove Mills, in 1954 totaled \$12 million. This included output of primary products (knit gloves) valued at \$10 million, production of secondary products valued at \$2 million, and a negligible amount of miscellaneous receipts.

Industry 2255 output of knit gloves in 1954 represented 86 percent of its total products made (primary and secondary). In 1947, this primary product specialization ratio was 91 percent. Industry 2255 production of knit gloves in 1954 represented 20 percent of these products, valued at \$50 million, produced by all industries. This coverage ratio in 1947 was 34 percent. Other industries producing knit gloves consisted mainly of Industry 2381, Fabric Dress Gloves, \$27 million, and Industry 2382, Fabric Work Gloves, \$9 million. The decrease of 15 percentage points in the coverage ratio between the two years reflects the relative sharp increase by 1954 in the output of these products on a cut-and-sew basis from fabrics knit in other establishments. As indicated above, knit gloves are also primary to Industries 2381 and 2382 which accounts for the relatively low coverage ratio for the output of these products by Industry 2255.

#### 2256--Knit Fabric Mills

This industry comprises establishments primarily engaged in knitting tubular or flat fabric (including warp-knit mosquito netting) and in dyeing or finishing knit fabric. For a detailed list of primary products of Industry 2256, refer to Table 6A, product codes 2256111 to 2256298.

Included in Industry 2256 are knit fabric mills operated by multi-plant companies which transfer the knit cloth produced to other plants of the same company for further fabrication into such products as knit underwear and gloves. The plants cutting and sewing the knit cloth are classified in one of the industries in Major Group 23, Apparel and Related Products. On the other hand, if the knitting mill is integrated in that it both makes the knitted cloth and also produces knitted apparel, it is classified in one of the knitting industries described above. Data on the output of such knit fabrics by the latter group of plants are not included in the figures shown in Table 6A for this industry.

The value of shipments of Industry 2256, Knit Fabric Mills, in 1954 totaled \$377 million. This included shipments of primary products (knit fabric) valued at \$321 million, shipments of secondary products valued at \$19 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$38 million.

Industry 2256 shipments of knit fabric in 1954 represented 95 percent of its total product shipments. In 1947, this primary product specialization ratio was 93 percent. Industry 2256 shipments of knit fabric in 1954 represented 91 percent of these products, valued at \$352 million, shipped by all industries. This coverage ratio in 1947 was 88 percent. Other industries shipping knit fabric consisted mainly of Industry 2234, Synthetic Broad-Woven Fabrics, \$11 million; Industry 2253, Knit Outerwear Mills, \$6 million; and Industry 2254, Knit Underwear Mills, \$10 million.

The figures shown in Table 6A for specific types of knitted fabrics are slightly overstated due to the inclusion of shipments of some greige goods in the totals which should represent "finished goods" shipped. From information obtained from the Bureau's 1955 survey on Knit Cloth For Sale, it is estimated that total shipments of greige goods in 1954 amounted to approximately 12 million pounds. Approximately one-third of this quantity was included in the 1954 Census figures, principally in the data for underwear and nightwear fabrics. An exact measure of the amount of greige goods erroneously reported as "finished goods," however, cannot be determined. An unknown quantity of greige goods included in the underwear and nightwear totals may properly appear there because they were shipped to consumers in other industries and, therefore, would not duplicate the shipments of "finished" knitted fabrics.

#### 2259--Knitting Mills, N.E.C.

This industry comprises establishments primarily engaged in knitting articles not elsewhere classified, such as knit curtains, washcloths, dishcloths, and towels. Establishments primarily engaged in manufacturing from purchased fabrics, curtains and draperies, are classified in Industry 2391, Curtains and Draperies, and housefurnishings such as sheets, pillowcases, blankets, bedspreads, etc., are classified in Industry 2392, Housefurnishings. For a detailed list of primary products of Industry 2259, refer to Table 6A, product codes 2259011 to 2259098.

The value of shipments of Industry 2259, Knitting Mills, N.E.C., in 1954 totaled \$16 million. This included shipments of primary products (knitting mill products, n.e.c.) valued at \$10 million, shipments of secondary products valued at \$6 million, and a negligible amount of miscellaneous receipts.

Industry 2259 shipments of knitting mill products, n.e.c., in 1954 represented 62 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 98 percent. The decrease of 36 percentage points in the specialization ratio reflects the increased shipments of products which are not primary to Industry 2259.

Industry 2259 shipments of knitting mill products, n.e.c., in 1954 represented 75 percent of those valued at \$13 million shipped by all industries. This coverage ratio in 1947 was 89 percent.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## KNITTING MILLS

22C-5

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Knit underwear mills," "Knit-fabric mills," and "Knit glove mills" industries, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>For 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>5</sup>Omitted because of duplication in cost of materials and value of shipments. See text for this industry.

<sup>6</sup>Prior to 1937 "Full-fashioned hosiery mills" and "Seamless hosiery mills" constituted a single industry and "Knit outerwear mills" and "Knit glove mills" also were combined in one industry. "Knit fabric mills" and "Knitting mills n.e.c." were a single industry prior to 1939. The two related industries have in each case been combined in a portion of the table in order that data could be shown for the period 1923-1954.

<sup>7</sup>The figures for 1935-1954 include data for dyers and finishers of hosiery knitted by others, whereas the figures for earlier years do not include such data.

<sup>8</sup>Prior to 1923, "Hosiery mills," "Knit outerwear mills and knit glove mills," "Knit underwear mills," and "Knit-fabric mills and knitting mills, n.e.c." constituted a single classification, "Knit goods." Comparable data are therefore not available for earlier years.

<sup>9</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$45.3 million for "Knit outerwear mills" and \$51.7 million for "Knit underwear mills."

<sup>10</sup>Data for establishments that cut and stitch products from knit cloth made in separate mills of integrated companies are included in the figures for 1937 and 1939, but not for other years. Value added in 1937, excluding data for such establishments, was \$50.8 million for "Knit outerwear mills and knit glove mills" and \$54.3 million for "Knit underwear mills."

## KNITTING MILLS

22C-7

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> D Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2251, Full-fashioned Hosiery Mills: New England—New Hampshire, 3 (500-999); Massachusetts, 6 (500-999); East North Central—Illinois, 8 (500-999); Michigan, 1 (20-99); West North Central—Minnesota, 1 (250-499); Iowa, 2 (100-249); Missouri, 2 (100-249); Nebraska, 1 (20-99); South Atlantic—Delaware, 17 (100-249); Florida, 7 (100-249); East South Central—Kentucky, 3 (500-999); Alabama, 4 (500-999); West South Central—Arkansas, 2 (100-249); Texas, 5 (500-999); Pacific—California, 15 (250-499).

S.I.C. 2252, Seamless Hosiery Mills: New England—Maine, 1 (1-19); Vermont, 2 (20-99); Rhode Island, 1 (20-99); Connecticut, 3 (100-249); Middle Atlantic—New York, 14 (500-999); New Jersey, 5 (100-249); East North Central—Ohio, 3 (250-499); Indiana, 1 (250-499); Illinois, 4 (500-999); West North Central—Minnesota, 1 (20-99); Missouri, 2 (100-249); South and West—Delaware, 2 (100-249); Maryland, 7 (250-499); West Virginia, 2 (1,000-2,499); South Carolina, 5 (250-499); Mississippi, 7 (500-999); Arkansas, 3 (100-249); Louisiana, 2 (250-499); Colorado, 1 (20-99); California, 1 (1-19).

S.I.C. 2253, Knit Outerwear Mills: New England—Maine, 2 (20-99); Vermont, 1 (1-19); Connecticut, 15 (250-499); South—Maryland, 2 (1-19); West Virginia, 1 (100-249); North Carolina, 10 (500-999); South Carolina, 1 (20-99); Georgia, 3 (250-499); Florida, 1 (1-19); Tennessee, 1 (20-99); Alabama, 3 (1,011); Mississippi, 1 (1-19); Texas, 1 (1-19); Texas, 1 (250-499); West—Colorado, 1 (1-19); Utah, 2 (20-99); Washington, 8 (20-99); Oregon, 3 (1,363); California, 50 (500-999).

S.I.C. 2253, Pt. A, Manufacturers: New England—Maine, 1 (20-99); New Hampshire, 5 (500-999); Vermont, 1 (1-19); Connecticut, 5 (20-99); North Central—Ohio, 17 (1,000-2,499); Illinois, 11 (250-499); Minnesota, 7 (250-499); South—Maryland, 1 (1-19); Virginia, 9 (1,000-2,499); West Virginia, 1 (100-249); North Carolina, 8 (500-999); South Carolina, 1 (20-99); Georgia, 3 (250-499); Tennessee, 1 (20-99); Alabama, 3 (1,011); Mississippi, 1 (1-19); Texas, 1 (250-499); West—Colorado, 1 (1-19); Utah, 2 (20-99); Oregon, 3 (1,363); California, 43 (500-999).

S.I.C. 2253, Pt. B, Converters: Northeast—New Hampshire, 1 (250-499); Massachusetts, 1 (250-499); New Jersey, 6 (100-249); All Other Divisions—Ohio, 1 (20-99); Illinois, 1 (1-19); Minnesota, 2 (20-99); Maryland, 1 (1-19); North Carolina, 1 (20-99); California, 1 (1-19).

S.I.C. 2253, Pt. C, Contractors: Northeast—Maine, 1 (1-19); New Hampshire, 1 (1-19); Massachusetts, 4 (500-999); Connecticut, 10 (250-499); New Jersey, 50 (1,000-2,499); All Other Divisions—Ohio, 2 (100-249); Illinois, 1 (1-19); Virginia, 2 (20-99); North Carolina, 1 (20-99); Florida, 1 (1-19); California, 6 (20-99).

S.I.C. 2254, Knit Underwear Mills: New England—New Hampshire, 2 (20-99); Vermont, 1 (20-99); Rhode Island, 1 (100-249); Connecticut, 1 (100-249); Middle Atlantic—New York, 24 (2,500-4,999); New Jersey, 2 (20-99); North Central—Ohio, 3 (500-999); Illinois, 2 (100-249); Michigan, 3 (250-499); Wisconsin, 3 (1,176); Minnesota, 1 (1,000-2,499); South and West—Virginia, 3 (100-249); South Carolina, 1 (100-249); Kentucky, 1 (500-999); Alabama, 3 (1,000-2,499); Mississippi, 1 (500-999); Texas, 2 (1-19); Utah, 2 (100-249).

S.I.C. 2255, Knit Glove Mills: Northeast—New Hampshire, 1 (1-19); New York, 21 (1,000-2,499); All Other Divisions—Ohio, 1 (20-99); Indiana, 1 (20-99); Wisconsin, 2 (500-999); Minnesota, 1 (20-99); Iowa, 1 (20-99); Florida, 1 (1-19).

S.I.C. 2256, Knit Fabric Mills: New England—New Hampshire, 1 (20-99); Rhode Island, 10 (250-499); Connecticut, 7 (500-999); North Central—Ohio, 1 (1-19); Indiana, 1 (20-99); Michigan, 1 (1-19); Wisconsin, 6 (100-249); Iowa, 1 (20-99); South Atlantic—Delaware, 1 (20-99); Maryland, 1 (1-19); Virginia, 4 (500-999); Georgia, 1 (1-19); East South Central—Tennessee, 6 (1,000-2,499); Alabama, 3 (500-999); Pacific—California, 5 (20-99).

S.I.C. 2256, Pt. A, Manufacturers: Northeast—New Hampshire, 1 (20-99); Rhode Island, 7 (250-499); Connecticut, 4 (20-99); North Central and South—Indiana, 1 (20-99); Michigan, 1 (1-19); Wisconsin, 5 (100-249); Iowa, 1 (20-99); Maryland, 1 (1-19); Virginia, 3 (250-499); Georgia, 1 (1-19); Tennessee, 6 (1,195); Alabama, 3 (500-999); California, 5 (20-99).

S.I.C. 2256, Pt. B, Converters: All Other States—Massachusetts, 3 (250-499); Connecticut, 1 (250-499); Pennsylvania, 4 (100-249); Virginia, 1 (20-99); North Carolina, 2 (100-249).

S.I.C. 2256, Pt. C, Contractors: All Other States—Massachusetts, 8 (100-249); Rhode Island, 3 (100-249); Connecticut, 2 (250-499); Pennsylvania, 20 (500-999); Ohio, 1 (1-19); Wisconsin, 1 (1-19); Delaware, 1 (20-99); North Carolina, 4 (100-249).

S.I.C. 2259, Knitting Mills, N.E.C.: Northeast—Massachusetts, 2 (20-99); Connecticut, 2 (20-99); New Jersey, 1 (100-249); All Other Divisions—Ohio, 1 (1-19); Illinois, 1 (100-249); North Carolina, 3 (100-249); South Carolina, 1 (1-19); Georgia, 1 (20-99); Florida, 1 (1-19); Alabama, 1 (20-99); California, 2 (1-19).

<sup>2</sup> Omitted because of duplication in cost of materials and value of products shipped (See text for this industry).

Electric motors driven by purchased energy.....do...	53	41	3	9	1	(8)
Electric motors driven by energy generated at the establishment.....do...	1	1	...	(8)	...	...

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>Omitted because of substantial but indeterminate duplication in value of shipments and cost of materials. Specialization and coverage ratios are not meaningful because of such duplication. These ratios were, however, quite high (over 90) since the value of secondary products of the industry is very low and plants classified in other industries shipped very little full-fashioned hosiery, finished or in the greige. <sup>3</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>4</sup>Less than \$500 thousand. <sup>5</sup>Less than 500 tons. <sup>6</sup>Less than \$5 thousand. <sup>7</sup>Less than 500 thousand kwh. <sup>8</sup>Less than 500 hp.

## KNITTING MILLS

22C-13

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Omitted because of duplication in value of shipments. See introductory text for this industry.

<sup>4</sup>Ratios not meaningful because of duplication in value of shipments. These ratios were, however, quite high (over 90) since the value of secondary products of the industry is very low and plants classified in other industries shipped very little full-fashioned hosiery, either finished or in the greige.

<sup>5</sup>Figures include both woven and knit swimwear and athletic shorts, although only the knit portion is primary to Industry 2253. However, for the purpose of calculating the specialization and coverage ratios, only the knit portion was included.

## KNITTING MILLS

22C-15

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

22590	Other knitting mill products, n.e.c.....	9,704	3,168	12,872			
	Secondary products.....	5,865	xxx	xxx			
	Miscellaneous receipts.....	236	xxx	xxx			

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Omitted because of duplication in value of shipments. See Introductory text for this industry.<sup>2</sup>Includes shipments (in thousands of dollars) by the following industries: \$12,108 by Industry 2339, Women's Outerwear, N.E.C.; and \$5,542 by Industry 2369, Children's Outerwear, N.E.C.<sup>3</sup>Includes shipments (in thousands of dollars) by the following industries: \$20,313 by Industry 2254, Knit Underwear Mills; \$29,117 by Industry 2321, Men's Dress Shirts and Nightwear; \$15,399 by Industry 2339, Women's Outerwear, N.E.C.; \$2,310 by Industry 2341, Women's and Children's Underwear; and \$20,611 by Industry 2369, Children's Outerwear, N.E.C.<sup>4</sup>Represents the value of shipments of both woven and knit swimwear and athletic shorts. However, only the knit garments are primary to Industry 2253, Knit Outerwear Mills. The value of shipments of knit swimwear and athletic shorts for this industry is \$5,041 thousand; for Industry 2329, Men's and Boys' Clothing, N.E.C., \$1,520 thousand; for Industry 2339, Women's Outerwear, N.E.C., \$253 thousand; and for Industry 2369, Children's Outerwear, N.E.C., \$358 thousand. In computing the industry specialization and coverage ratios for knit outerwear mills, the \$5,041 thousand value of shipments was used.<sup>5</sup>Includes shipments (in thousands of dollars) by the following industries: \$13,137 by Industry 2329, Men's and boys' Clothing, N.E.C.; \$48,358 by Industry 2339, Women's Outerwear N.E.C.; and \$10,247 by Industry 2369, Children's Outerwear, N.E.C.<sup>6</sup>Nearly all of this amount was shipped by Industry 2323, Men's and Boys' Neckwear.<sup>7</sup>Nearly all of this amount was shipped by Industry 2325, Men's and Boys' Cloth Hats.<sup>8</sup>Nearly all of this amount was shipped by Industry 2369, Children's Outerwear, N.E.C.<sup>9</sup>Less than \$100 thousand.<sup>10</sup>Includes a small amount of woven garments.<sup>11</sup>Excludes a small amount of knit garments.<sup>12</sup>Includes a negligible amount of production of other industries.<sup>13</sup>Of this figure, 38 percent consists of the following product classes: 22920, Lace goods; 23411, Women's and children's underwear; and 23412, Women's and children's nightwear.

<sup>1</sup>For 1947, the value of women's and misses' full-fashioned finished hosiery was estimated because of undercoverage in the reporting by hosiery jobbers of finished hosiery made from purchased greige goods in that year. The value was estimated by multiplying the number of dozens shipped in the greige by the per dozen value of finished goods made from purchased greige goods; this value, \$117,004 thousand, when added to the value of finished goods made from own yarns, \$308,138 thousand, provides an estimated total value of \$425,142 thousand.

<sup>2</sup>For 1947 a portion of the value of women's and misses' seamless hosiery was estimated because of undercoverage in the reporting by hosiery jobbers of finished hosiery made from purchased greige goods in that year. The value was estimated by multiplying the number of dozens shipped in the greige by the per dozen value of finished goods made from purchased greige goods; this value, \$8,294 thousand, when added to the value of finished goods made from own yarns, \$45,210 thousand provides an estimated total value of \$53,504 thousand.

<sup>3</sup>Other knit products" also include product code 2253181 and 2253185.

<sup>4</sup>Product code 2253345 combined with product code 2253355.

<sup>5</sup>Of this total \$303 thousand was shipped by plants classified in Industry 2253, and is believed to represent knit swimwear.

<sup>6</sup>Combines products 2321261 and 2341261.

<sup>7</sup>Combines products 2321265 and 2322071.

<sup>8</sup>Combines products 2321271 and 2322061.

<sup>9</sup>Includes product code 2322038.

<sup>10</sup>Product 2341133 distributed between 2341131 and 2341132.

<sup>11</sup>Product 2341159 combined with 2341169.

<sup>12</sup>Product 2341251 distributed between 2341261 and 2341265.

<sup>13</sup>The 1947 reporting form requested 25% or more wool content; the effect of the change to 50% or more wool for 1954 is believed to be negligible.

<sup>14</sup>Included in "other dress and semi-dress gloves and mittens." Figures on dress and semi-dress gloves and mittens as reported by type were not considered reliable enough to be presented separately. A distribution by type has been presented for 1947 with Facts for Industry series M67D-08.

<sup>15</sup>Product code 2381021 combined with 2381025.

<sup>16</sup>Quantities shipped as "Interplant Transfers" to other plants of the same company are combined with data "For sale" in order to avoid disclosing the operations of individual companies.

<sup>17</sup>Includes wool or chiefly wool knit fabrics.

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Connecticut.....	3,952	Pennsylvania.....	43,793		

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they may not be the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the states listed but the exact figures are withheld to avoid disclosure of individual company figures: 22511, New Hampshire, Massachusetts, Minnesota, Iowa, Kentucky, Mississippi, and Texas; 22512, Alabama, Arkansas, and Texas; 22521, Indiana, and Illinois; 22522, Connecticut, New York, New Jersey, Ohio, Michigan, Virginia, West Virginia, Kentucky, and Alabama; 22523, New Hampshire, Massachusetts, Indiana, Illinois, Wisconsin, Delaware, Virginia, Alabama, and Mississippi; 22531, New Hampshire, West Virginia, Texas, Oregon, and California; 22532, New Hampshire, Rhode Island, Indiana, Minnesota, Maryland, and California; 22533, Massachusetts, Washington, Oregon, and California; 22561, Rhode Island, Connecticut, Minnesota, South Carolina, Tennessee, Alabama, and California; 22562, Rhode Island, Connecticut, Virginia, South Carolina, Georgia, Tennessee, and Alabama.

<sup>2</sup>The 1947 data include estimates for undercoverage in the reporting by hosiery jobbers; see footnotes to Table 6A.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

2259	KNITTING MILLS, N.E.C. (entire industry).....	46	1,359	3,950	1,167	2,218	2,846	7,059	8,746	15,805
	Establishments with:									
	90% or more specialization.....	31	558	1,687	472	903	1,150	3,563	4,017	7,581

Note: Plant specialization data are not shown for industries 2253 and 2256 as a whole since specialization ratios for contractors were not computed. Such ratios would not be meaningful since they could relate to only a minor portion of the contractors' total activity, that is, production on own account from materials owned by them, and would not be representative of the activity of these establishments as a whole.

<sup>1</sup>Omitted because of duplication in the cost of materials and value of product shipped (see introductory text for this industry).

<sup>2</sup>This class includes data for establishments with less than 50% specialization in the primary products of the industry, and for Industries 2251 and 2252 only, also includes establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>3</sup>Represents establishments specializing in the production of the specified knit garment from fabric knit in these establishments.

Table 9.—PERCENT DISTRIBUTION OF SHIPMENTS OF THE FULL-FASHIONED AND SEAMLESS HOSIERY INDUSTRIES, BY CLASS OF CUSTOMER: 1954

Class of Customer	Percent of total value of shipments and interplant transfers								
	Full-fashioned and seam- less hosiery industries			Industry 2251-- Full-fashioned hosiery			Industry 2252-- Seamless hosiery		
	Total	Hosiery	Other products	Total	Hosiery	Other products	Total	Hosiery	Other products
Shipments including interplant transfers, total.....	100	100	100	<sup>1</sup> 100	100	100	<sup>1</sup> 100	100	100
Shipments to or on orders from wholesalers and distributors.....	27	28	31	18	18	8	39	39	41
Shipments to other manufacturing companies and converters.....	8	7	41	8	8	37	8	7	43
Shipments on direct orders from retailers:									
Chain stores and mail-order houses.....	25	25	11	20	20	19	32	32	7
Independent retail stores.....	11	12	7	15	15	7	7	7	7
Department stores.....	14	14	4	19	19	7	8	8	2
Shipments to retail stores owned by reporting company and company owned subsidiaries.....	1	(Z)	(Z)	...	(Z)	1	(Z)	(Z)	...
Interplant transfers (shipments to other manufacturing plants of reporting company in the United States).....	12	12	6	18	18	20	5	6	...
Direct export.....	1	1	(Z)	1	1	1	(Z)	(Z)	...
Other customers, including government.....	1	1	...	1	1	...	1	I	...

Z Less than 0.5 percent. <sup>1</sup>Value figures are not shown because of duplication in the value figures for the industries. Percentages shown by class of customer are based on reports from establishments accounting for 89 percent of the value of products shipped by the Full-Fashioned Hosiery Industry and 92 percent in the Seamless Hosiery Industry, respectively.

## Carpets, Rugs, and Other Floor Coverings

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

Code	Title
2271—	Wool Carpets and Rugs
2273—	Carpets and Rugs, Except Wool
2274—	Hard-Surface Floor Coverings

2271—Wool Carpets and Rugs (Full Standard Industrial Classification Title: Wool Carpets, Rugs, and Carpet Yarn)

Industry 2271, Wool carpets and rugs, comprises establishments primarily engaged in weaving carpets and rugs wholly or in part of woolen or worsted yarn. This industry also includes establishments primarily engaged in spinning woolen or worsted yarn for use in carpets and rugs. Important products of this industry include woven wool carpets and rugs (Axminster, Wilton, plain or printed velvet, chenille, Smyrna); wool automobile and aircraft floor covering; and woolen and worsted system carpet yarn.) Establishments primarily engaged in spinning woolen or worsted yarn for other than carpets and rugs are classified in Census Industry 2212 (part of Standard Industrial Classification 2221), Yarn mills (except carpet) wool. For a detailed list of products of Industry 2271, refer to Table 6A, product codes 2271111 to 2271231.

The value of shipments and cost of materials for this industry contain extensive duplication. This duplication results from the shipments of carpet yarn from yarn spinning establishments classified in this industry to the carpet mills also classified in this industry. Because of this duplication, total value of shipments and cost of materials have been omitted from all tables. This duplication does not affect value added by manufacture and other statistics shown in the tables.

In addition to the shipments of wool carpets and rugs, and woolen and worsted carpet yarns (primary products), establishments in this industry also shipped \$44 million of secondary products, mainly tufted carpets and rugs, man-made fiber woven rugs and woolen and worsted yarns, except carpet. The industry also had \$4 million of miscellaneous receipts, primarily for commission work done on materials owned by others. The exact relationship of this industry's primary product shipments to its total product shipments (primary and secondary) has not been shown in Table 5A because of the duplication in shipments mentioned above. However, this ratio is quite high (over 90 percent). Since the value of secondary products shipped by the industry was low compared to the value of its primary products.

Industry 2271 shipments of wool carpets and rugs in 1954 represented 99 percent of the total value of these products (\$342 million) shipped by all industries. In 1947, the industry accounted for 97 percent. The industry's shipments of woolen and worsted system carpet yarns in 1954 represented 98 percent of the total value of these products (\$78 million) shipped by all industries. In 1947, the ratio was also 98 percent.

A large part of the total yardage of wool carpets and rugs is produced in large integrated mills, engaged in fiber preparation, spinning of yarn on the woolen system, dyeing, and weaving. The smaller mills in the industry are engaged either in weaving (using purchased yarn), or in producing yarn for sale.

Carpet wool is the major material used in the surface pile, although the consumption of rayon and other man-made fibers for surface pile showed a significant increase in 1954 as compared to 1947. The backing materials consist of jute

yarns produced in Industry 2297, Jute goods, except felt, and cotton yarns, supplied mainly by cotton-system yarn mills, Industry 2224.

2273—Carpets and Rugs, Except Wool (Full Standard Industrial Classification Title: Carpets, Rugs, and Mats from Fiber, Except Wool)

Industry 2273, Carpets and Rugs, except wool comprises establishments primarily engaged in manufacturing rugs, carpets, art squares, floor mattings, and door mats and mattings from any fiber except wool. Materials used include cotton, rayon, nylon, twisted paper, grasses, reeds, coir (cocoa fiber), sisal, jute, and rags. Establishments primarily engaged in dyeing floor coverings (other than wool) are also classified in this industry. For a detailed list of products of Industry 2273, refer to Table 6A, product codes 2273111 to 2273351.

The value of shipments of Industry 2273 in 1954 totaled \$175 million. This included shipments of primary products (carpets and rugs, except wool) valued at \$160 million, shipments of secondary products (mainly wool carpets and rugs, and tufted bedspreads and bed sets) of \$9 million, and miscellaneous receipts of \$7 million.

Industry 2273 shipments of carpets and rugs, except wool in 1954 represented 95 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 84 percent.

Industry 2273 shipments of carpets and rugs, except wool in 1954 represented 83 percent of such products valued at \$192 million shipped by all industries. The comparable 1947 coverage ratio was 86 percent. Industry 2271, Wool Carpets and Rugs was the principal other industry shipping these products. The floor coverings produced in other industries consisted largely of tufted cotton and man-made fiber carpets and rugs (product class 22731). The growth of Industry 2273 since 1947 is largely accounted for by a more than ten-fold increase in the shipments of tufted carpets and rugs. Mills in the tufted products branch of the industry typically specialize in inserting tufting yarns into fabric backing, and do not manufacture either the yarns or fabric used. A large number of these mills also have their products dyed and finished by commission finishers. Such finishers are also included in this industry. The weaving mill branch of the industry includes some establishments with standard wool carpet equipment, producing cotton, man-made fiber or paper yarn carpets and rugs; others weave cotton throw rugs and bath mats on standard cotton looms. The remaining mills included in the industry employ miscellaneous rug-making processes such as knitting, braiding, and hooking. Nearly all of the mills are single-line in that they employ one process exclusively.

The growth of the tufted rug branch of the industry since 1947 has been accompanied by a marked change in the cotton vs man-made fiber production pattern. In 1947, practically no man-made fiber tufted rugs were produced, while in 1954 about 25 percent of the total production of tufted carpets and rugs was accounted for by rayon or nylon rugs and carpeting.

The Census Bureau conducts a semi-annual Facts For Industry survey of the tufted rug branch of the industry. Data obtained from tufting mills in the Census of Manufactures were compared with their Facts For Industry reports, the comparison resulting in a number of corrections in the latter data. The production figures shown in Table 6A should thus be regarded as final, superseding the data previously published in the Facts For Industry series.

**2274--Hard-Surface Floor Coverings** (Full Standard Industrial Classification Title: Linoleum, Asphalted-Felt-Base, and Other Hard-Surface Floor Coverings, N.E.C.)

Industry 2274, Hard-surface floor coverings, comprises establishments primarily engaged in manufacturing linoleum, cork carpet, asphalted-felt-base, and other hard-surface floor coverings, not elsewhere classified. Establishments primarily engaged in manufacturing supported plastic floor and wall covering are also included in this industry, but those primarily engaged in extruding plastic sheeting and tile (unsupported) are classified in Industry 3971, Fabricated plastic products, n.e.c. Establishments primarily engaged in manufacturing rubber floor covering are classified in Industry 3099, and asphalt floor tile in Industry 3292, Asbestos products. For a detailed list of products of Industry 2274, refer to Table 6A, product codes 2274111 to 2274331.

The value of shipments of Industry 2274 in 1954 totaled \$182 million. This included shipments of primary products (hard-surface floor and wall coverings) valued at \$155 million and shipments of secondary products of \$27 million.

Industry 2274 shipments of hard-surface floor and wall coverings in 1954 represented 85 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 91 percent. Industry 2274 shipments of hard-surface floor and wall coverings in 1954 represented 97 percent of such products valued at \$160 million shipped by all industries. The comparable 1947 coverage ratio was 100 percent i.e., none of these products was made by establishments classified in other industries in 1947.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## CARPETS, RUGS AND OTHER FLOOR COVERINGS

NA Not available. <sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. (However, in the case of Industry 2274 a different method was used for 1954: All employees represents the average of twelve monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November). For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October). <sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For Industry 2274, the 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years. <sup>3</sup>Figures for years prior to 1935 do not include cost of contract work. <sup>4</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments." <sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table. <sup>6</sup>Value of products shipped and cost of materials, etc. are omitted for this industry because each of these measures contains extensive duplication. The duplication arises because the products of some establishments are used as materials by other establishments classified in the same industry. (See text on industry and also Introduction, "Duplication in cost of materials and value of products.") <sup>7</sup>Data for carpet yarn are included in the figures for 1935-1954 and are excluded from the figures for 1899-1933. Value added for 1935, excluding data for carpet yarn and therefore on a basis comparable with earlier years was \$59,022,981. <sup>8</sup>The figures for 1899-1909 include data for jute carpets whereas the figures for later years do not include data for this product. <sup>9</sup>Separate data not available prior to 1937.

## MANUFACTURES—INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947  
(For explanation of column captions see Introduction)

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> D Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2271, Wool Carpets, Rugs, and Carpet Yarn: New England—Maine, 1 (1-19); Rhode Island, 1 (20-99); Connecticut, 3 (2,500-4,999); Other divisions—Illinois, 2 (1,000-2,499); Michigan, 2 (1-19); Wisconsin, 1 (20-99); Minnesota, 1 (20-99); Virginia, 2 (1,000-2,499); North Carolina, 3 (500-999); South Carolina, 1 (20-99); Georgia, 2 (20-99); Mississippi, 1 (500-999); Texas, 1 (1-19); Oregon, 1 (1-19); California, 5 (100-249). S.I.C. 2273, Carpets and Rugs, except Wool: New England—Maine, 2 (20-99); Massachusetts, 16 (250-499); Rhode Island, 10 (100-249); Middle Atlantic—New York, 8 (20-99); New Jersey, 5 (100-249); Pennsylvania, 31 (500-999); North Central—Ohio, 4 (20-99); Indiana, 2 (100-249); Illinois, 3 (20-99); Michigan, 3 (20-99); Wisconsin, 2 (500-999); Minnesota, 1 (100-249); Iowa, 1 (1-19); South—Maryland, 1 (20-99); Virginia, 1 (100-249); Florida, 1 (1-19); Kentucky, 1 (1-19); Arkansas, 1 (100-249); Texas, 2 (1-19); Pacific—Oregon, 1 (100-249); California, 28 (500-999).

S.I.C. 2274, Hard-Surface Floor Coverings: New England—Maine, 2 (250-499); Massachusetts, 1 (500-999); Connecticut, 1 (100-249); Middle Atlantic—New Jersey, 4 (2,203); Pennsylvania, 4 (5,278); North Central, South and West—Ohio, 2 (100-249); Delaware, 1 (250-499); California, 1 (500-999).

<sup>3</sup> Omitted because of duplication in cost of materials and value of products shipped (See introductory text).

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Percentages not meaningful because value of shipments includes a significant amount of duplication. The specialization ratio is quite high, (over 90%) since the value of secondary products shipped by the industry was low compared to the value of its primary products, wool carpets and rugs and carpet yarn. The coverage ratio is over 95 percent since nearly all wool carpets, rugs, and carpet yarns are produced in Industry 2271. <sup>4</sup>Omitted because of duplication in value of shipments and cost of materials (see introductory text). <sup>5</sup>Less than 500 tons. <sup>6</sup>Less than \$5,000. <sup>7</sup>Less than 500 thousand kwh. <sup>8</sup>Less than \$500 thousand. <sup>9</sup>Less than 500 hp.

## MANUFACTURES--INDUSTRY STATISTICS

Table 4.--SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

	1947..	( <sup>3</sup> )	( <sup>3</sup> )	11,874	7,154	( <sup>4</sup> )	( <sup>3</sup> )	( <sup>3</sup> )	( <sup>3</sup> )	( <sup>4</sup> )
2273	Carpets and rugs, except wool.....1954..	175,010	159,502	8,572	6,936	95	192,019	159,502	32,517	83
	1947..	55,559	45,649	8,770	1,140	84	52,801	45,649	7,152	86
2274	Hard-surface floor coverings.....1954..	181,582	154,738	26,760	84	85	159,679	154,738	4,941	97
	1947..	173,255	153,877	15,973	3,405	91	<sup>2</sup> 153,877	153,877	...	100

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Omitted because of duplication in value of shipments (see introductory text). <sup>4</sup>Percentages not meaningful because value of shipments includes a significant amount of duplication. The specialization ratio is quite high (over 90), since the value of secondary products shipped by the industry was low compared to the value or its primary products, wool carpets and rugs and carpet yarn. The coverage ratio is over 95 percent since nearly all wool carpets, rugs, and carpet yarns are produced in Industry 2271.

## CARPETS, RUGS AND OTHER FLOOR COVERINGS

22D-7

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between carpets, carpet yarn and hard-surface floor covering, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Wool carpets and rugs (S.I.C. 2271)	Carpets and rugs except wool (S.I.C. 2273)	Hard-surface floor coverings (S.I.C. 2274)	Other industries	All industries
	Total shipments and receipts of the industry.....	( <sup>1</sup> )	175,010	181,582	xxx	xxx
227	Carpets, carpet yarn and hard-surface floor coverings.....	( <sup>1</sup> )	161,739	154,738	14,284	( <sup>1</sup> )
22711	Wool carpets and rugs.....	337,774	2,108	...	2,440	342,322
22712	Carpet and rug weaving yarns, wool systems.....	76,544	129	...	1,237	77,910
22731	Tufted carpets and rugs, except wool.....	15,075	127,882	...	4,468	147,425
22732	Woven carpets and rugs, except wool.....	(D)	9,977	...	(D)	16,238
22733	Other carpets and rugs, except wool.....	(D)	21,643	...	(D)	28,356
22741	} Linoleum and supported plastic floor and wall covering.....	...	...	84,618	4,941	89,559
22743		...	...	70,120	...	70,120

Pennsylvania.....	80,071	1947 United States, total.....	51,009		
		1954			
		Middle Atlantic.....	51,868		

NOTE: The figures shown for 1949 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 22711, Maine, Massachusetts, Connecticut, Illinois, Virginia, North Carolina, Georgia, Mississippi, and California; 22712, Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, Virginia, and Georgia; 22731, Indiana, North Carolina, Alabama, Arkansas, and California.

<sup>2</sup>Includes value of automobile and aircraft floor coverings other than wool.

xxx Not applicable. <sup>1</sup>Omitted because of extensive duplication in cost of materials and value of shipments (see introductory text). <sup>2</sup>Includes some wool consumed in the manufacture of yarns other than carpets. <sup>3</sup>Represents yarns purchased from other plants and does not include raw cotton or man-made fiber staple consumed by the reporting establishments.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2271	WOOL CARPETS AND RUGS (entire industry).....	98	30,076	111,009	25,336	48,852	86,199	191,409	( <sup>1</sup> )	( <sup>1</sup> )
	Establishments with: 90% or more specialization.....	73	25,578	94,778	21,633	41,840	74,101	166,965	( <sup>1</sup> )	( <sup>1</sup> )
22711	Wool carpets and rugs: All establishments specializing in product class. Establishments with: 90% or more specialization.....	61	25,684	96,314	21,448	41,673	74,137	173,941	210,537	384,478

## Hats (Except Cloth and Millinery)

This report shows 1954 Census of Manufactures statistics for establishments classified in one of the following industries.

<u>Code</u>	<u>Title</u>
2281--	Fur-felt Hats And Hat Bodies
2282--	Wool-felt Hats And Hat Bodies
2283--	Straw Hats
2284--	Hatters' Fur

Establishments primarily engaged in the manufacture of millinery made from purchased hat bodies are classified in Industry 2351, Millinery, and establishments making cloth hats and caps are classified in Industry 2325, Men's and Boys' Cloth Hats. These two industries are not included in this report. Industries 2281-2284, described below, include plants which make finished hats from hat bodies made in the same establishment, as well as finished hats made from purchased hat bodies. In addition, establishments which make hat bodies for sale as such are also included in these industries. Therefore, the figures on total value of shipments for these industries contain some duplication since they include data from both the producers of the semi-finished product (hat bodies) and the manufacturing establishments which use these purchased hat bodies in making finished hats. From the data shown in Table 6, it is estimated that in 1954 this duplication amounted to about 12 percent for Industry 2281, and no more than 10 percent for Industry 2282. Duplication in Industry 2283 cannot be exactly determined from Table 6 since some straw hats were made from imported hat bodies.

It should be noted that the establishments classified in the hat industries account for most of the output of the products primary to Industry Group 228. Similarly, hat plants largely make only the products primary to these industries and do not produce any significant quantities of products primary to other industry groups. There is, however, as indicated by Table 5B, some overlap in the production within the industry group in that

some establishments will produce both felt and straw hats; the value of the secondary products for the most part represents products primary to the hat industries.

### 2281--Fur-Felt Hats and Hat Bodies

This industry comprises establishments primarily engaged in manufacturing fur-felt hat bodies from hatters' fur, in manufacturing finished fur-felt hats from hat bodies produced in the same establishment, and in manufacturing men's and boys' finished fur-felt hats from purchased hat bodies. For a detailed list of primary products of Industry 2281, refer to Table 6, product codes 2281011 to 2281055.

### 2282--Wool-Felt Hats and Hat Bodies

This industry comprises establishments primarily engaged in manufacturing wool-felt hat bodies from raw wool and wool waste, in manufacturing wool-felt hats from hat bodies produced in the same establishment, and in manufacturing men's and boys' finished wool-felt hats from purchased hat bodies. For a detailed list of primary products of Industry 2282, refer to Table 6, product codes 2282011 to 2282055.

### 2283--Straw Hats

This industry comprises establishments primarily engaged in manufacturing straw hat bodies, in manufacturing straw hats from hat bodies produced in the same establishment, and in manufacturing men's and boys' finished straw hats from purchased hat bodies. For a detailed list of primary products of Industry 2283, refer to Table 6, product codes 2283011 to 2283051.

### 2284--Hatters' Fur

This industry comprises establishments primarily engaged in producing hatters' fur for use as material in manufacturing fur-felt bodies.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments <sup>3</sup> (\$1,000)

<sup>1</sup>For the period 1949-1954 figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of non-production workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>For 1929 and 1949-1953, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>In this industry, which contains a large number of very small establishments, there is a possibility that some of these small establishments have been misclassified as to industry in 1954. This would not affect the statistics other than the number of establishments.

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volume for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>Data for finishing of men's wool-felt hats are included in the figures for "Fur-felt hats and hat bodies" for 1899-1937 and in the figures for "Wool-felt hats and hat bodies" for 1939 and 1947.

<sup>7</sup>Includes 9 establishments primarily engaged in manufacturing fur-felt hats, girls cotton hats, children's caps, beanies, etc. These establishments reported 193 employees (average for the year): \$501,000 wages and salaries; 187 production and related workers (average for the year); \$463,000 wages; \$618,000 value added by manufacture; \$401,000 cost of materials etc.; and \$1,019,000 of shipments.

<sup>8</sup>The figures for "Straw hats" for prior years are not sufficiently comparable to be shown in this table because they include data for women's and children's straw hats.

<sup>9</sup>"Hatter's fur" was not shown as a separate industry prior to 1937, but was included with the industry formerly designated "Hat and caps materials, men's."

## HATS (EXCEPT CLOTH AND MILLINERY)

22E-3

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2281, Fur-Felt Hats and Hat Bodies: New England—Massachusetts, 2 (20-99); Connecticut, 18 (2,500-4,999); North Central—Ohio, 1 (1-19); Indiana, 1 (100-249); Illinois, 2 (20-99); Missouri, 3 (100-249); South and West—Virginia, 1 (20-99); Georgia, 2 (1-19); Kentucky, 1 (1-19); California, 5 (1-19).

S.I.C. 2282, Wool-Felt Hats and Hat Bodies: New England—Massachusetts, 2 (500-999); Connecticut, 2 (100-249); Middle Atlantic—New York, 15 (100-249); New Jersey, 3 (20-99); North Central, South and West—Illinois, 1 (1-19); Missouri, 2 (20-99); California, 1 (1-19).

S.I.C. 2283, Straw Hats: Middle Atlantic—New York, 29 (500-999); New Jersey, 1 (20-99); North Central, South and West—Illinois, 4 (100-249); Missouri, 2 (250-499); Maryland, 1 (250-499); Tennessee, 1 (100-249); Oklahoma, 1 (1-19); California, 1 (1-19).

S.I.C. 2284, Hatters' Fur: Middle Atlantic—New York, 2 (20-99); New Jersey, 9 (250-499).

## MANUFACTURES--INDUSTRY STATISTICS

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954

(For explanation of line captions see Introduction)

Item	Fur-felt hats and hat bodies (S.I.C. 2281) all establishments	Wool-felt hats and hat bodies (S.I.C. 2282)		Straw hats (S.I.C. 2283)		Hatter's fur (S.I.C. 2284) all establishments

Electric motors driven by energy generated at the establishment.....do....	2	...	...	...	...	...

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than \$500 thousand. <sup>4</sup>Less than 500 thousand cubic feet. <sup>5</sup>Less than \$5,000. <sup>6</sup>Less than 500 hp.

## HATS (EXCEPT CLOTH AND MILLINERY)

22E-5

Table 4.--SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

	1947..	23,823	<sup>2</sup> 23,823	(D)	(D)	(D)	22,243	(D)	(D)	(D)

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary). <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Includes over \$2 million in receipts for contract and commission work.

## MANUFACTURES--INDUSTRY STATISTICS

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

970000	Other materials, containers, and supplies consumed.....	xxx	22,067	xxx	12,974

<sup>1</sup>Hatter's fur included with "Other" to avoid disclosure of operations of individual companies.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2282	WOOL-FELT HATS AND HAT BODIES (entire industry).....	32	1,750	4,951	1,552	2,809	3,862	7,250	6,308	13,559
	Establishments with:									
	90% or more specialization.....	24	779	2,180	691	1,227	1,685	3,170	2,912	6,082
2283	STRAW HATS (entire industry).....	48	2,294	6,262	1,992	4,103	5,252	11,573	10,897	22,470
	Establishments with:									
	90% or more specialization.....	34	1,347	4,033	1,158	2,297	2,962	7,228	7,007	14,236
	75-89% specialization.....	4	147	327	139	272	301	310	554	865
	50-74% specialization.....	5	646	1,305	558	1,259	1,577	3,279	3,180	6,460
	All other <sup>1</sup> .....	5	153	596	136	274	411	753	154	908

<sup>1</sup>This class includes data for establishments with less than 50% specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

## Miscellaneous Textile Goods

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2291--	Felt Goods, Not Elsewhere Classified
2292--	Lace Goods
2293--	Padding and Upholstery Filling
2294--	Processed Textile Waste
2295--	Coated Fabrics, Except Rubberized
2298--	Cordage and Twine
2299--	Textile Goods, Not Elsewhere Classified

As the title implies, these industries manufacture textile products but are not otherwise related. Each industry has more or less unique equipment requirements and there is very little interchange or overlap of facilities. With few exceptions, there are no common ties of ownership between these industries or with other Major Group 22 industries.

**2291--Felt Goods, N.E.C. (Full Standard Industrial Classification Title: Felt Goods, Except Woven Felts and Hats)**

This industry comprises establishments primarily engaged in manufacturing insulating and automotive felts, under-rug mats, and other felt goods, from wool, hair, and jute, by means of heat, moisture, and pressure, or by the needle-loom process. Establishments primarily engaged in manufacturing wool woven felts and haircloth are classified in Census Industry 2213 (SIC Industry 2232), Woolen and Worsted Fabrics; felthats in Group 228, Hats, except Cloth and Millinery; and building paper felt, Industry 2613, Building Paper and Board Mills. For a detailed list of primary products of Industry 2291, refer to Table 6A, product codes 2291011 to 2291098.

The value of shipments of Industry 2291, Felt goods, n.e.c. in 1954 totaled \$93 million. This included shipments of primary products (felt goods, except woven felts and hats) valued at \$82 million, shipments of secondary products valued at \$9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$2 million.

Industry 2291 shipments of primary products in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947, the primary product specialization ratio was 95 percent. Secondary products shipped by Industry 2291 in 1954 included \$3 million of padding and upholstery filling, and a variety of other textile products.

In Industry 2291 shipments of felt goods, except woven felts or hats in 1954 represented 92 percent of those products valued at \$89 million shipped by all industries. The 1947 coverage ratio was 97 percent.

### 2292--Lace Goods

This industry comprises establishments primarily engaged in manufacturing lace-machine products such as levers laces, bobbinet, Nottingham lace (curtain nets, curtains, bedspreads, table covers), and Barmen lace. This industry also includes establishments primarily engaged in dyeing and finishing lace goods. Establishments primarily engaged in manufacturing machine embroideries are classified in Industry 2397, Schiffli-Machine Embroideries or 2398, Embroideries, except Schiffli. For a detailed list of primary products of Industry 2292, refer to Table 6A, product codes 2292011 to 2292098.

The value of shipments of Industry 2292, Lace Goods in 1954 totaled \$60 million. This included shipments of primary products (lace goods) valued at \$51 million, shipments of secondary products valued at \$1 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$8 million.

Industry 2292 shipments of lace goods in 1954 represented 99 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 94 percent.

Industry 2292 shipments of lace goods in 1954 represented 94 percent of lace goods valued at \$55 million shipped by all industries. The 1947 coverage ratio was 97 percent.

### 2293--Padding and Upholstery Filling

This industry comprises establishments primarily engaged in manufacturing batting, padding, wadding, and upholstery filling from curled hair, cotton, moss, hemp tow, flax tow, kapok, and related materials. Establishments primarily manufacturing hard fiber automotive and other pads are also included in this industry. Establishments primarily engaged in manufacturing excelsior pads and wrappers are classified in Industry 2425, Excelsior Mills. For a detailed list of primary products of Industry 2293, refer to Table 6A, product codes 2293011 to 2293059.

The value of shipments of Industry 2293 in 1954 totaled \$149 million. This included shipments of primary products (paddings and upholstery filling) valued at \$135 million and shipments of secondary products valued at \$13 million.

Industry 2293 shipments of paddings and upholstery fillings in 1954 represented 91 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 96 percent. Secondary products shipped by this industry in 1954 consisted of a variety of textile products.

Industry 2293 shipments of paddings and upholstery filling in 1954 represented 90 percent of the paddings and upholstery filling valued at \$149 million shipped by all industries. The 1947 coverage ratio was 92 percent. Other industries shipping paddings and upholstery filling consisted mainly of Industry 2515, Mattresses and Bedsprings \$8 million; and Industry 2291, Felt Goods, n.e.c., \$3 million.

**2294--Processed Textile Waste (Full Standard Industrial Classification Title: Processed Waste and Recovered Fibers)**

This industry comprises establishments primarily engaged in processing textile-mill waste for spinning and other uses, and in recovering cotton, wool, rayon, silk, and other fibers from clippings and rags. Establishments primarily engaged in manufacturing oakum are also included in this industry. Establishments primarily engaged in processing wiping rags are classified in Wholesale Trade. Sales by textile mills of "original" mill waste such as card strips, comber noils and sweepings are not classified as processed textile waste. The product data shown in this bulletin exclude such textile mill waste which are shown in Bulletins MC-22A, Woolen and Worsted Manufactures, and MC-22B, Cotton, Rayon and Related Manufactures. For a detailed list of primary products of Industry 2294, refer to Table 6A, product codes 2294011 to 2294098.

The value of shipments of Industry 2294 in 1954 totaled \$85 million. This included shipments of primary products (processed textile waste) valued at \$72 million, shipments of secondary products valued at \$3 million, and miscellaneous receipts of \$10 million.

Industry 2294 shipments of processed textile waste in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 94 percent. Secondary products shipped by this industry in 1954 consisted of various textile products.

Industry 2294 shipments of processed textile waste in 1954 represented 93 percent of these products valued at \$76 million shipped by all industries. The 1947 coverage ratio was 94 percent. The principal other industry shipping processed textile waste in 1954 was Industry 2298, Cordage and Twine, \$2 million.

**2295--Coated Fabrics, Except Rubberized (Full Standard Industrial Classification Title: Artificial Leather, Oilcloth, and Other Impregnated and Coated Fabrics, Except Rubberized)**

This industry comprises establishments primarily engaged in manufacturing artificial leather, oilcloth, and other coated

and impregnated fabrics, and in the finishing of textiles such as the waxing of cloth and finishing of cambric and buckram. Establishments primarily engaged in waterproofing, flameproofing, mildew proofing, mercerizing, and embossing textile fabrics are classified in Industry 2261, Finishing Textiles, Except Wool. Establishments primarily engaged in manufacturing coated and processed paper, including varnished and leatherette paper, are classified in Industry 2641, Paper Coating And Glazing; and those manufacturing rubberized fabrics in Industry 3099, Rubber Industries, Not Elsewhere Classified. For a detailed list of primary products of Industry 2295, refer to Table 6A, product codes 2295111 to 2295398.

In the 1947 Census of Manufactures, plants primarily producing unsupported non-rubber film from purchased resins were included in Industry 2295. In 1954, such establishments are classified in Industry 3971, Plastics Products, Not Elsewhere Classified. The 1947 Census data have been retabulated to reflect this change.

The value of shipments of Industry 2295 in 1954 totaled \$212 million. This included shipments of primary products (coated fabrics, except rubberized) valued at \$175 million, shipments of secondary products valued at \$28 million, and miscellaneous receipts (mainly for contract work on materials owned by others) of \$9 million.

Industry 2295 shipments of coated fabrics, except rubberized in 1954 represented 86 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 84 percent. Secondary products shipped by Industry 2295 in 1954 included rubber products \$3 million, coated paper, \$4 million, and vinyl and polyethylene unsupported film and sheets, \$5 million.

Industry 2295 shipments of coated fabrics, except rubberized in 1954 represented 82 percent of these products valued at \$215 million shipped by all industries. The 1947 coverage ratio was also 82 percent.

#### 2298--Cordage and Twine

This industry comprises establishments primarily engaged in manufacturing rope, cable, cordage, twine, nets, and seines and related goods, from hemp, jute, cotton, paper, flax, and other fibers. Establishments primarily engaged in manufacturing cotton yarns for cordage, rope and twine are classified in Industry 2224, Yarn Mills, Cotton System; and Linen Nets and Seines in Industry 2299, Textile Goods, N.E.C. For a detailed list of primary products of Industry 2298, refer to Table 6A, product code 2298111 to 2298398.

The value of shipments of Industry 2298 in 1954 totaled \$160 million. This included shipments of primary products (cordage and twine) valued at \$143 million, shipments of secondary products valued at \$16 million, and miscellaneous receipts of \$2 million.

Industry 2298 shipments of cordage and twine in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 87 percent. Secondary products shipped by Industry 2298 in 1954 consisted of yarns spun on cotton system (\$4 million), processed textile waste and recovered fibers (\$2 million) and other secondary products (\$9 million).

Industry 2298 shipments of cordage and twine in 1954 represented 89 percent of the cordage and twine, valued at \$160 million shipped by all industries. The 1947 coverage ratio was 87 percent. Other industries shipping cordage and twine included Industry 2299, Textile Goods, N.E.C. \$6 million.

Establishments classified in Industry 2298 accounted for almost 100 percent of all shipments of hard fiber cordage and twine (product class 22981).

2299--Textile Goods, Not Elsewhere Classified (Includes Standard Industrial Classification Industry 2296, Linen Goods; Industry 2297, Jute Goods, Except Felt, and Industry 2299, Textile Goods, Not Elsewhere Classified.)

This industry comprises establishments primarily engaged in manufacturing linen goods, jute goods, except felts and other textile goods, not elsewhere classified. Important products of this industry include flax yarn and thread; linen fabrics; jute yarn, roving, webbing and bagging; non-woven (bonded) textiles; novelty yarns made from purchased yarns, glass fiber yarn and cord; paper yarns; metallic yarns; hemp and ramie yarn, thread, and textiles; rope slings and scaffolds; and linen nets and seines. Establishments primarily engaged in manufacturing linen or jute cordage and twine are classified in Industry 2298, Cordage and Twine. Establishments primarily engaged in manufacturing jute felts are classified in Industry 2291, Felt Goods (Except Woven Felts And Hats). For a detailed list of primary products of Industry 2299, refer to Table 6A, product codes 2297111 to 2297198 and 2299111 to 2299298.

The value of shipments of Industry 2299 in 1954 totaled \$122 million. This included shipments of primary products (textile goods, not elsewhere classified) valued at \$104 million, shipments of secondary products valued at \$14 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$3 million.

Industry 2299 shipments of textile goods, not elsewhere classified in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947 this primary product specialization ratio was 87 percent. Secondary products shipped by this industry in 1954 included \$6 million of soft fiber cordage and twine, except cotton.

Industry 2299 shipments of textile goods, not elsewhere classified in 1954 represented 81 percent of these products, valued at \$129 million shipped by all industries. In 1947 this coverage ratio was 76 percent.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MISCELLANEOUS TEXTILE GOODS

22F-3

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.--GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS--Continued

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Textile goods, n.e.c. (Census Code 2299):								
1954.....	108	8,975	29,106	7,736	21,116	54,115	67,488	121,603
1953 <sup>5</sup> .....	(NA)	10,356	34,990	8,910	26,925	61,838	68,684	130,522
1952 <sup>5</sup> .....	(NA)	11,218	36,333	9,589	27,273	59,392	63,831	123,223
1951 <sup>5</sup> .....	(NA)	9,837	29,840	8,641	23,639	51,658	56,856	108,516
1947.....	59	7,583	17,795	6,780	14,187	32,730	33,119	65,109

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. (However, in the case of the "coated fabrics, except rubberized" industry a different method was used for 1954. All employees represents the average of 12 monthly figures, and production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November.) For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction "Value Added by Manufacture." For the "Lace goods," "Cordage and twine" and "Textile goods, nec," industries, the 1947 value added by manufacture does not equal the published value of products shipped less cost of materials, etc., because an estimated value of production was used in the calculation in place of value of products shipped. Since the 1949-1952 figures are estimates derived from the 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Figures for years prior to 1935 (1933 for "Lace goods") do not include cost of contract work.

<sup>4</sup>For 1947-1954, value of shipments; for all other years, value of production. See Introduction "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>The figures for "Felt goods, nec" prior to 1935 are not sufficiently comparable with those for later years to be shown in this table because they include data for woven felts, which are no longer classified in this industry.

<sup>7</sup>The larger number of establishments in 1954 is due primarily to an increase in the number of very small lace finishing plants operating on a commission basis.

<sup>8</sup>"Lace goods" was not shown as a separate industry in 1914, but was included with "Cotton goods" and "Cotton small wares."

<sup>9</sup>In this industry, which contains a number of very small establishments, there is a possibility that some of these small establishments have been misclassified as to industry. This would not affect the statistics other than the number of establishments.

<sup>10</sup>Prior to 1935, the products of this industry were included in the "Cotton goods," "Woolen goods," and "Upholstering materials, nec," industries.

<sup>11</sup>The figures for "Processed textile waste" prior to 1937 are not sufficiently comparable with these for later years to be shown in this table because they include data for wiping rags, which are no longer classified as a manufactured product.

<sup>12</sup>No comparable figures are available for prior years.

<sup>13</sup>Includes 2 small establishments with total shipments of less than \$10,000 incorrectly classified in the "Hard fiber cordage and twine" industry and 4 establishments that lay rope from semi-manufactured products.

<sup>14</sup>The figures for 1939 have been revised to include data for fish nets and seines and are comparable with figures for 1947. Value added for 1939, excluding data for fish nets and seines and on a basis comparable with earlier years, was \$29.0 million.

## MISCELLANEOUS TEXTILE GOODS

22F-5

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2291, Felt Goods, nec.: New England—Maine, 1 (1-19); Massachusetts, 12 (500-999); Rhode Island, 3 (20-99); Connecticut, 1 (100-249);

Middle Atlantic—New York, 15 (500-999); New Jersey, 6 (250-499); North Central—Ohio, 3 (20-99); Michigan, 1 (250-499); Kansas, 2 (1-19); South

Atlantic—Virginia, 1 (100-249); North Carolina, 1 (500-999); South Carolina, 1 (1-19); Georgia, 1 (20-99); Florida, 1 (1-19).

S.I.C. 2292, Lace Goods: All Other Divisions—Maine, 1 (20-99); Massachusetts, 2 (20-99); Ohio, 1 (100-249); Tennessee, 1 (20-99); California, 1

(20-99).

S.I.C. 2293, Padding and Upholstery Filling: New England—Vermont, 1 (20-99); Rhode Island, 2 (100-249); Connecticut, 4 (20-99); East North Central—

Indiana, 4 (250-499); Wisconsin, 5 (100-249); West North Central—Minnesota, 3 (1-19); Missouri, 5 (500-999); South Atlantic—Delaware, 1 (1-19);

Maryland, 3 (20-99); South Carolina, 1 (100-249); Florida, 5 (20-99); West South Central—Arkansas, 1 (20-99); Louisiana, 6 (20-99); Texas, 10

(500-999); Pacific—Washington, 2 (1-19); Oregon, 1 (1-19).

S.I.C. 2294, Processed Textile Waste: New England—New Hampshire, 2 (20-99); Vermont, 1 (1-19); Connecticut, 7 (20-99); Middle Atlantic—New Jersey, 7

(100-249); Pennsylvania, 14 (250-499); East North Central—Indiana, 2 (1-19); Michigan, 2 (1-19); Wisconsin, 4 (20-99); South and West—Delaware, 2

(20-99); Virginia, 1 (1-19); Florida, 1 (1-19); Tennessee, 2 (20-99); Alabama, 1 (100-249); Louisiana, 2 (20-99); Oklahoma, 1 (20-99); Texas, 1

(20-99); Colorado, 1 (20-99); California, 3 (20-99).

S.I.C. 2295, Coated Fabric except Rubberized: New England—Maine, 2 (20-99); Connecticut, 5 (20-99); Middle Atlantic—New York, 25 (1,000-2,499);

Pennsylvania, 2 (1-19); North Central—Illinois, 3 (500-999); Michigan, 1 (100-249); Wisconsin, 2 (100-249); Missouri, 1 (20-99); South and West—

South Carolina, 2 (20-99); Florida, 1 (1-19); Kentucky, 1 (20-99); Tennessee, 1 (100-249); Texas, 1 (1-19); California, 5 (100-249).

S.I.C. 2298, Cordage and Twine: New England—Maine, 2 (1-19); New Hampshire, 1 (20-99); Rhode Island, 4 (100-249); East North Central—Ohio, 3

(100-249); Wisconsin, 2 (20-99); West North Central—Iowa, 1 (20-99); Missouri, 3 (250-499); South Atlantic—Maryland, 2 (250-499); Virginia, 1

(20-99); Georgia, 4 (1,102); East South Central—Kentucky, 2 (100-249); Tennessee, 2 (250-499); Alabama, 4 (1,246); Mississippi, 2 (1-19);

Pacific—Washington, 4 (20-99); Oregon, 1 (20-99).

S.I.C. 2299, Textile Goods, nec.: All Other Divisions—Maine, 1 (1-19); Connecticut, 1 (20-99); Indiana, 1 (1-19); Illinois, 4 (500-999); Minnesota, 2

(100-249); Delaware, 1 (250-499); Maryland, 1 (1-19); South Carolina, 2 (100-249); Alabama, 2 (100-249); Mississippi, 1 (100-249); Arkansas, 1

(100-249); Louisiana, 1 (1-19); Texas, 1 (1-19); California, 2 (20-99).

<sup>2</sup>Includes South and West.

## MISCELLANEOUS TEXTILE GOODS
